

HEMS in the Crossfire between Safety, Regulations, Humanity and Culture

Is there a Solution or at least a
Way out?

Thomas Gnägi

The limit of the safety

If you want to make a system
absolutely safe,
then you will reach a point
where the safety will
change to a risk factor!

Safety vs Legislation

Legislation doesn't
necessarily enhance safety.

Safety has to be a grown and
actively lived culture.

The Pressure in HEMS Ops

The Challenge to meet

Is there a solution?

«Law development»

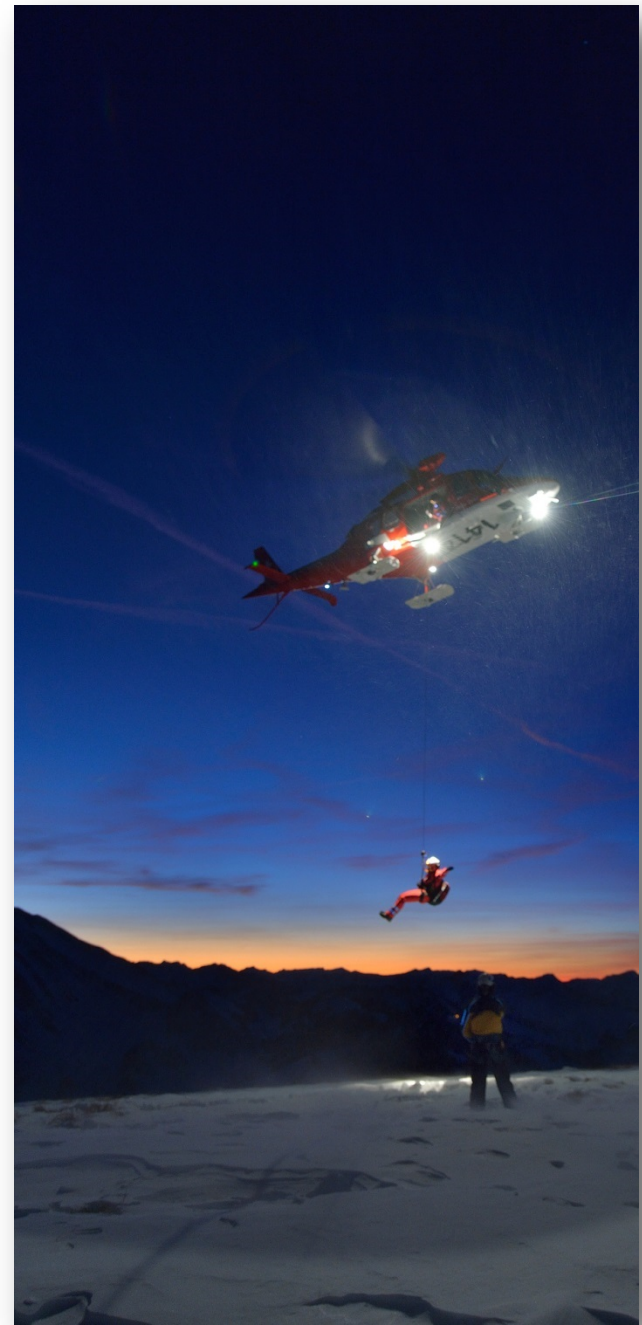

Five simple questions

About the skills of:

- me and my crew?
- the helicopter and equipment?
- the passengers and cargo?
- the environment?

And last but most important:

- does it make sense?

Another five questions

What about the risk for:

- me and my crew?
- the helicopter and equipment?
- the passengers and cargo?
- the environment?

And last but most important:

- am I willing to accept the risk and to take the responsibility?

Twice five questions and...

- ...you will not be safe...
- ...but you know the risks and you will most probably enjoy the flight!!

Thank you very much
for your attention
