

# **FAQs:**

Part-NCC/NCO, Air Operations, Regulations

### **Question:**

Do NCC operators with non-EU registered aircraft need to maintain two different Operations Manuals?

### **Answer:**

The European provisions for the structure of the Operations Manual are specified in AMC2 ORO.MLR.100. The structure is very flexible and – where needed – could be amended through an alternative means of compliance.

It is strongly advised that the operator work with a single Operations Manual, which should address the specified minimum items of the State of the Operator and the State of Registry.
