

FAQs:

[Considerations “at the departure airport”, Passenger Health Safety - COVID-19, Passengers](#)

Question:

How are environments and surfaces at airports and on board cleaned and disinfected?

Answer:

The EASA guidelines recommend the regular cleaning and disinfecting of all frequently touched surfaces (e.g. door handles, banister rails, buttons). Particular attention should also be paid to plastic security screening trays as well as to facilities such as airport lavatories. Hand sanitiser points should be made readily available.
