

FAQs:

[Risk management](#), [Information Security \(Part-IS\)](#)

Question:

Is there a standard sequence to be followed when conducting an information security risk assessment?

Answer:

Part-IS does not require the use of any specific information security risk assessment framework. Organisations can start their information security risk assessment either from the safety consequences (impact on safety) or from identifying the assets (elements) and the threats to those assets. A combination of the above methodologies is also possible and recommended.
