

FAQs:

[ORO.GEN](#), [Part-ORO](#), [Air Operations](#), [Regulations](#)

Question:

What are the responsibilities of the AOC holder required to implement a management system in accordance with ORO.GEN.200 in regards to continuing airworthiness management and contracted maintenance?

Answer:

Reference: Regulation (EU) No 965/2012 on Air Operations, Annex III (Part-ORO); Regulation (EU) No 1321/2014 on continuing airworthiness, Part-M

1. Continuing airworthiness management

The EU licensed air carrier hereafter referred to as 'the operator', needs to consider both the relevant Part-ORO rules that will become fully applicable on 29 October 2014 and the applicable Part-M requirements. For these operators, the Part-M Subpart-G approval is an integral part of the AOC (as defined in Part-M, M.A.201(h)).

The Part-M requirements have not yet been amended to align with the management system framework adopted for air operations. However the operator should 'scrutinise' all its activities under its hazard identification and risk management processes, including the continuing airworthiness activities. It is the operator's responsibility to ensure that hazards entailed by any continuing airworthiness management task are subject to the applicable hazard identification procedures and that related risks are managed as part of the operator's management system procedures.

If the operator's continuing airworthiness activities do not comply with the new management system requirements adopted with Part-ORO the competent authority may not raise any finding in reference to Part-M Subpart G, but may do so under Part-ORO should it consider that the operator's safety risk management process does not sufficiently capture those risks stemming from the continuing airworthiness management activities that may impact the safety of operations. The integration of safety management across all activities will lead to increased efficiency and effectiveness in hazard identification and risk management as compared to a system where activities are being dealt with in isolation through separate management systems. This will improve the assessment of risks identified and ensure better allocation of

resources to address these risks, by eliminating conflicting or duplicating procedures and objectives.

When it comes to assessing compliance with Part-ORO competent authorities should acknowledge that implementing effective safety risk management capabilities for all activities subject to the approval will take time and therefore a balanced approach for checking compliance is needed to enable a smooth transition towards the new management system requirements.

Considering the benefits of taking a holistic, integrated approach to management system for effective safety management, competent authorities should also not mandate the implementation of separate management systems for the different approvals of the same organisation. Competent authorities should instead focus on assessing whether the management system implemented is adequate as regards the size, nature and complexity of the activities it is deemed to cover.

2. Maintenance

The issue is slightly different in the area of contracted maintenance: As the Part-145 requirements have not yet been amended to align with the management system framework adopted for air operations, the maintenance organisation may not have established a management system to effectively identify maintenance specific hazards and manage related risks. However, the operator would still need to consider such hazards and risks entailed by contracted maintenance, as it would do for any other contracted activity that has an impact on aviation safety, under its own management system. Once Part-145 organisations will have implemented the new management system requirements including safety risk management, the operator will be able to establish an interface with the hazard identification and risk management processes of the maintenance organisation and consider the contracted organisation's capability to properly address maintenance specific hazards and risks for their own safety risk management.

This FAQ addresses the case of EU licensed air carriers, meaning operators holding both and AOC in accordance with Regulation (EU) No. 965/2013 and an operating licence in accordance with Regulation (EC) No 1008/2008
