**Notes:**
- **EASA STC No.**: Unique identifier for each Supplemental Type Certificate (STC).
- **STC Holder**: The company or organization issuing the STC.
- **System**: The specific system or component being certified.
- **Rev. level**: Revision level of the STC or system.
- **Foreign/NAA STC ref.**: Reference to any foreign or non-European Aviation Authority Supplemental Type Certificate.
- **Models**: The models for which the STC is applicable.
- **Description**: A brief description of the STC.
- **Certification basis**: Details on the basis for the certification, including references to applicable regulations.
- **Associated Technical Documentation**: Any additional documentation required for the STC.
- **Limitations/Conditions**: Notes on any limitations or conditions applicable to the STC.
- **Date of Issue**: The date the STC was issued.
- **Status**: Whether the STC is active, expired, or revoked.
- **System Record**: Record number associated with the STC.

The Certification Basis (CB) for the original product remains applicable to this certificate/ approval. The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product are unchanged and remain applicable to this certificate/ approval.

Installation in accordance with RAISBECK Engineering MasterDrawing List(MDL). 14BC-61-000, Revision A, dated August 28, 2017. This installation requires the prerequisite installation of STC SA5151NM(LBA STC SA1011) which installs Raisbeck Dual Air Body Strakes. Aircraft must be operated in accordance with the above listed documents or later revisions of the above listed documents approved by EASA.

The Certification Basis for the original product remains applicable to this certificate/ approval. This certificate/ approval involves a change to the requirements for environmental protection or a change to the certified noise or emissions levels.

Prior to installation of this design change it must be determined that the interrelationship between this design change and any other previously installed design change and/or repair will introduce no adverse effect upon the airworthiness of the product.

Installation in cockpit, on both Captain and F/O sides, of one 28VDC converter dual USB charging plugs.

The Certification Basis for the original product remains applicable to this certificate/ approval. The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product are unchanged and remain applicable to this certificate/ approval.

**Notes:**
- STC: Supplemental Type Certification
- Each STC has specific requirements and limitations that must be followed during installation.
- Prior to installation, the approval holder must ensure that all requirements are met and that the installation does not introduce any adverse affects on the airworthiness of the product.
- The STCs are subject to revision and updates, and it is important to check for the most current information.
- EASA: European Union Agency for Safety of Aviation
- MPD: Modular Procedure Document
- STDD: Supplemental Type Design Document

**Notes:**
- CERTIFICATION BASIS:
  - For STC TWENTY ONE LIMITED:
    - The Certification Basis (CB) for the original product remains applicable to this certificate/approval.
    - The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product remain applicable to this certificate/approval.
  - For AEROTEC & CONCEPT:
    - The Certification Basis for the original product remains applicable to this certificate/approval.
    - The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product remain applicable to this certificate/approval.

- LIMITATIONS/CONDITIONS:
  - Prior to installation of any changes/replacements, it must be determined if the related installation will introduce any adverse effects upon the airworthiness of the product.
  - To remain compliant with FAA AD 2017-22-04 perform inspections per Service Bulletin, this design change does not introduce any adverse effects upon the airworthiness of the product.

- REMARKS:
  - STC REF. 40090-01-A-CP-R01 or later revisions of the above listed document(s) approved/accepted under the EASA.
  - Master Drawing List (MDL) No. 155-002-00, Revision 19, dated 9 October 2017, or later Federal Aviation Administration (FAA) approved revision.
  - To remain compliant with FAA AD 2017-22-04 perform inspections per Service Bulletin.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended by additional or later amendment(s) if indicated on FAA STC SR00925DE. The requirements for environmental protection and the associated certificated noise and/or emissions levels of the original product remain unchanged and remain applicable to this certificate/approval.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended by additional or later amendment(s) if indicated on FAA STC ST0432NY. The requirements for environmental protection and the associated certificated noise and/or emissions levels of the original product remain unchanged and remain applicable to this certificate/approval.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended by additional or later amendment(s) if indicated on FAA STC ST03311CH. The requirements for environmental protection and the associated certificated noise and/or emissions levels of the original product remain unchanged and remain applicable to this certificate/approval.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended by additional or later amendment(s) if indicated on FAA STC SH18-56 ISSUE 1. The requirements for environmental protection and the associated certificated noise and/or emissions levels of the original product remain unchanged and remain applicable to this certificate/approval.

Data Engineering Approved Model List 0198-10082-2419, Revision A0, dated 23 December 2021; and/or later revisions of the above listed document(s) approved/accepted on behalf of EASA in accordance with the Technical Implementation Procedures of EU USA Bilateral Agreement.

See Specific Limitations § 2.2. of FAA Approved Model List. Prior to installation of this design change it must be determined that the interrelationship between this design change and any other previously installed design change and/or repair will introduce noise/voice effect upon the airworthiness of the product.

See Specific Limitations § 2.2. of FAA Approved Model List. Prior to installation of this design change it must be determined that the interrelationship between this design change and any other previously installed design change and/or repair will introduce noise/voice effect upon the airworthiness of the product.

Precautions: This list contains a selection of Supplemental Type Certificates (STCs) issued by the European Union Aviation Safety Agency (EASA). The information provided includes the STC holder, active status, movies related to the STCs, description of the STCs, certification basis, associated technical documentation, limitations/conditions, date of issue, status, and system record. Each STC is associated with specific aircraft models, such as Airbus A319, A320, and A321, and includes details on the installation of various avionics, environmental protection, and noise reduction systems. The STCs cover a wide range of aircraft models, including those manufactured by Boeing, Airbus, and Bell Textron, among others. The certification process ensures that these modifications do not compromise the aircraft's airworthiness and environmental compliance. The date ranges specified (e.g., 27/03/2020) indicate the period during which these STCs were active. The list is designed to provide a comprehensive overview of the active STCs and their associated details, allowing for informed decision-making in the aircraft modification and certification process.

Additional notes:
- The change is defined with Revision D of Master Document List document ADDL- A3401-1-4430. The Aircraft shall be operated in accordance with Revision A of Aircraft Flight Manual Supplement document AFMS-A3401-1-4430. Or later revisions of the above listed document(s) approved/accepted under the EASA system.
- AVS PMA, LLC. PMA No.: P03038855/010/10 issued 03/17/2020 for Article Nr. NP-UM153A Bolt (Jacket to pivot), Revision A, dated 4-29-2020. PMA, LLC. Document No. AVS-ALSD0001, Airworthiness Limitation/Supplement Rev. A, dated 2-6-2020 or later revisions of the above listed document(s).
- With the application of this STC the technical documentation A0-1856-FCD, A0-1856-AMF and A0-1856-ICA become obsolete. Prior to installation of this change/repair it must be determined that the interrelationship between this change/repair and any otherwise preinstalled change/repair and repair will not introduce roadnoise effect upon the airworthiness of the product. This STC is valid for aircraft types and models...

Installation of Airwolf remote mounted engine oil filter at AFC-K017 on 15tn aircraft powered by Pratt & Whitney radial reciprocating engine series R-985, R-1340 and R-1830.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended indicated on FAA STC SA1805NY. The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product remains unchanged and remain applicable to this certificate/approval without any in...

Airwolf Instructions for Continued Airworthiness, AFC-K000-IQA, revision FF, dated 5 July 2012, or later FAA accepted revision. Prior to installation of this change/repair it must be determined that there is no adverse effect upon the airworthiness of the product. 1. Airwolf Oil Filter Model AFC-400 (Champion) is eligible only with R-985 series engines. 2. Airwolf Oil Filter Model AFC-700 (Fram) is eligible on R-885, R-1340and R-1830 series engines. 3. Engine compartment firewall for mounting of oil filter shall be of 0.021inch minimum thickness ASTM A527 galvanized steel or equivalent.

The Certification Basis for the original product remains applicable to this certificate/approval, except where amended indicated on FAA STC SA1805NY. The requirements for environmental protection and the associated certified noise and/or emissions levels of the original product remains unchanged and remain applicable to this certificate/approval without any in...

Seaton Engineering Corporation Master Drawing List as listed on AMLSA01861SE. Instructio ns for Continued Airworthiness (IC) Document Number9910-008, Revision D, dated 25 June 2013, or later FAA approved revision. FAA approved Aircraft Flight Manual Supplement as listed on AMLSA01861SE.

Prior to installation of this change/repair it must be determined that there is no adverse effect upon the airworthiness of the product. This STC is valid for aircraft types and models approved.

Cabin control console and electrical system installation

The Certification Basis for the original product as amended by the following additional or alternative airworthiness requirements: the following paragraph(s) at a later amendment : CS.27 Annex IV 40.67.1, 27.21, 27.25, 27.27, 27.29, 27.30, 27.305, 27.307, 27.309, 27.317, 27.337, 27.341...

- 135P0010-FMS-01 Flight Manual Supplement, Issue 1. 135P0010-M-00 Master Document List, Issue 1 for later revisions of the above listed document(s) approved/accepted by the FAA.

- Installation of STC EASA-IA.M.R.5.0140.Air Film Camera System is acceptable. Safety issues identified by the user for installation of this STC are unchanged and remain applicable to this certificate/approval.

- Installation of STC EASA-IA.M.R.5.0140.Air Film Camera System is acceptable. Safety issues identified by the user for installation of this STC are unchanged and remain applicable to this certificate/approval.
