2. Approved Noise Levels:
see EASA TCDSN IM.A.077

3. Weight and Balance:

Current Weight and Balance Report, including list of equipment included in certificated empty weight and loading instructions when necessary, must be provided for each aircraft at the time of original certification.

The certified empty weight and corresponding center of gravity locations must include undrainable system oil (not included in oil capacity) and unusable fuel as noted below:

- Fuel: 5.44 kg (12 lb), at +3.870 m (+152.37 in)
- Oil: 1.72 kg (3.8 lb), at +1.549 m (+61.0 in)

4. Placards:

All placards required in the POH and AFM must be installed in the appropriate locations. The following placard must be displayed in clear view of the pilot:

"The markings and placards installed in this airplane contain operating limitations which must be complied with when operating this airplane in the Normal Category. Other operating limitations which must be complied with when operating this airplane in this category are contained in the Airplane Flight Manual.

No aerobatics maneuvers, including spins, approved."

5. Life Limitations (see also AMM, chapter 5-10-00 (P/N 761-783) or chapter 4-00-00 (P/N 761-876):
The life limit of the fuselage assembly, P/N 89600, is 10,145 hours time-in-service.
The life limit of the wing assembly, P/N 89640, is 15,580 hours time-in-service.

6. PA-46-350P serial numbers 4636196 and up incorporate additional structural strengthening of the wing landing gear that affects the maximum weights and C.G. range. This accounts for differences with respect to serial numbers 4622001 through 4622200 and 4636001 through 4636195.
