I. General

1. Type / Model:

Arrius 1 / Arrius 1A, Arrius 1A1, for twin-engines helicopters.

2. Type Certificate Holder:

Safran Helicopter Engines
64510 Bordes
France
DOA-ref: EASA.21J.070

Until 18 July 2016 Turbomeca
After 18 July 2016 Safran Helicopter Engines

3. Manufacturer:

Until 18 July 2016 Turbomeca
After 18 July 2016 Safran Helicopter Engines

4. Certification Application Date:

Arrius 1A: 5 October 1983
Arrius 1A1: 17 February 2005

5. EASA Certification Reference Date:

30 June 1985

6. EASA Certification Date:

Arrius 1A: 29 February 1988
Arrius 1A1: 15 December 2006

Note: EASA type certification for Arrius 1A model is granted in accordance with article 2 paragraph 3(a) of EU Commission Regulation EC 1702/2003 based on the DGAC France certification of this product.
II. Certification Basis

1. Airworthiness requirements:

JAR-E Change 6 dated 28/08/81, Section 1,2,4 (based on BCAR C issue 13: chap. C1-1, C1-2, C4-1, C4-2, C4-3, C4-6, C4-7) plus Blue Paper N°791 and 798 as per letter from DGAC, French Civil Aviation Authority, ref 53792 SFAC/TC dated 30/07/84 and 53118 SFAC/TC dated 05/02/88.

For Arrius 1A1 in addition:
CS-E 20(a): Engine configuration and interface (CS-E Initial Issue)
CS-E 25 (CS-E Amendment 4)

2. Environmental Standard:

Environmental protection as per 21 A.18(b) of regulation (EC) 1702/2003

III. Technical Characteristics

1. Type Design Definition:

<table>
<thead>
<tr>
<th>Engine</th>
<th>P/N</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrius 1A</td>
<td>0 319 00 513 0</td>
</tr>
<tr>
<td>Arrius 1A1</td>
<td>0 319 00 530 0</td>
</tr>
</tbody>
</table>

2. Description:

The Arrius 1A and 1A1 engines are free-turbine turboshaft engines of the 350 kW category. Arrius 1 engine consists of an annular air intake, a centrifugal compressor driven by a single-stage turbine, a reverse flow annular combustion chamber, a single stage free turbine with a through-shaft which drives a reduction gear assembly located at the front, and an exhaust pipe. The reduction gear unit casing also includes the accessory gearbox driven by the gas generator. The control system features an engine electronic control unit (EECU), with a manual back-up Starter-generator is not part of the engine type definition.

3. Equipment:

Engine equipment is specified by the applicable Type Design Definition.
4. Dimensions:

<table>
<thead>
<tr>
<th>Model</th>
<th>Length (m) with exhaust pipe</th>
<th>Height (m) without exhaust pipe</th>
<th>Width (m)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrius 1A(*) / 1A1</td>
<td>1.601</td>
<td>0.793</td>
<td>0.586</td>
</tr>
</tbody>
</table>

(*) With TU14 design change embodied

5. Dry Weight:

<table>
<thead>
<tr>
<th>Model</th>
<th>Dry Weight (Kg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrius 1A/1A1</td>
<td>102.7</td>
</tr>
</tbody>
</table>

6. Ratings:

<table>
<thead>
<tr>
<th>Ratings kW</th>
<th>Arrius 1A</th>
<th>Arrius 1A1</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 – ½ minute OEI</td>
<td>388</td>
<td>415</td>
</tr>
<tr>
<td>30 min / Continuous OEI</td>
<td>357</td>
<td>386</td>
</tr>
<tr>
<td>Takeoff</td>
<td>340</td>
<td>343</td>
</tr>
<tr>
<td>Maximum continuous</td>
<td>296</td>
<td>305</td>
</tr>
</tbody>
</table>

Note 1: Engine ratings correspond to minimum values defined under the following conditions:

- static, sea level standard conditions (15ºC, 1013 hPa)
- engines equipped with calibrated test bed air intake bellmouth P/N 6.203.13 726 0
- engines equipped with calibrated test bed air intake casing P/N 6.203.18.725.0
- use of exhaust pipe P/N 0.319.77.759.0
- no air bleed,
- no power drawn by any accessories other than those required for engine operation.
- fuel Low Heat Value : 43 136 kJ/kg
- output shaft rotation speed : 6016 rpm (100%)

Note 2: Detailed performance curves are provided in the relevant Installation / Operating Manuals.
7. Control System:

The control system is a single channel Electronic Engine Control Unit with manual back up.

Refer to the Installation / Operating Manuals for further information.

8. Fluids (Fuel, Oil, additives)

Refer to applicable Installation / Operating Manuals.

9. Aircraft Accessory Drives:

<table>
<thead>
<tr>
<th>Designation</th>
<th>Rotation direction Facing pad</th>
<th>Rotation speed</th>
<th>Maximum Steady state</th>
<th>Maximum torque at overload</th>
<th>Maximum static overhung moment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Starter Generator</td>
<td>CCW</td>
<td>11479</td>
<td>(*)</td>
<td>25</td>
<td>25</td>
</tr>
</tbody>
</table>

(*) Maximum Steady state mechanical off-take:
- Arrius 1A:
  - 4.8 kW at all ratings
- Arrius 1A1:
  - AEO rating (Max Continuous, Take off): 3 kW without de-rating
    If mechanical off-take is comprised between 3 kW and 6 kW, corrections to performance and ratings stated in Performance Booklet X 319 U1 100 2 shall be applied, and it shall be limited to 4.8 kW if altitude is higher than 10000 ft. Continuous OEI rating: 4.8 kW without de-rating
    If mechanical off-take is comprised between 4.8 kW and 6 kW, corrections to performance and ratings stated in Performance Booklet X 319 U1 100 2 shall be applied, and it shall be limited to 4.8 kW if altitude is higher than 10000 ft.
  - 2½ min OEI rating: 6 kW without de-rating, and limited to 4.8 kW if altitude is higher than 10000 ft.

Notes:
- CCW: counter clockwise
- The rotation direction of the power drives for the accessories is indicated considering the power drive seen from the outside.
10. Maximum Permissible Air Bleed Extraction:

P3 air bleed for helicopter use, maximum flow rate at standard sea level conditions: 70 g/s at Take-off rating
For further details, see Installation Manual.

IV. Operating Limitations:

1. Temperature Limits

1.1 Turbine Gas Temperature (°C)

<table>
<thead>
<tr>
<th></th>
<th>1A</th>
<th>1A1</th>
</tr>
</thead>
<tbody>
<tr>
<td>2-1/2 minute OEI rating</td>
<td>870</td>
<td>886</td>
</tr>
<tr>
<td>30 minute / Continuous OEI rating</td>
<td>800</td>
<td>812</td>
</tr>
<tr>
<td>Take off</td>
<td>800</td>
<td>773</td>
</tr>
<tr>
<td>Maximum continuous</td>
<td>765</td>
<td>749</td>
</tr>
<tr>
<td>Starting (unlimited)</td>
<td>765</td>
<td>765</td>
</tr>
<tr>
<td>Starting (limited to 5 sec.)</td>
<td>870</td>
<td>870</td>
</tr>
</tbody>
</table>

Refer to Installation Manual for required action if limits are exceeded.

1.2 Fuel temperature

Refer to relevant Installation / Operating Manuals

1.3 Oil temperature (°C)

- Minimum for power application: 0°C with 3 cst oils
  10°C with 5 cst oil.
- Maximum operating temperature: 80°C to 110°C depending on altitude and type of fuel. Refer to Installation Manual.
2. Pressure Limits

2.1 Fuel pressure

See installation / Operating Manuals

2.2 Oil pressure (hPa)

- Maximum: 1MPa
- Minimum : 170kPa at N1 greater than 65%

3. Maximum / Minimum Permissible Rotor Speeds

3.1. Gas generator speed (N1):

<table>
<thead>
<tr>
<th>Power rating</th>
<th>1A</th>
<th></th>
<th>1A1</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>rpm</td>
<td>%</td>
<td>rpm</td>
<td>%</td>

<tr>
<td>2-1/2 minute OEI rating</td>
<td>56140</td>
<td>103.7</td>
<td>56347</td>
<td>104.1</td>
</tr>
<tr>
<td>30 minute / Continuous OEI rating</td>
<td>55300</td>
<td>102.2</td>
<td>55452</td>
<td>102.5</td>
</tr>
<tr>
<td>Takeoff</td>
<td>54685</td>
<td>101</td>
<td>54375</td>
<td>100.5</td>
</tr>
<tr>
<td>Maximum continuous</td>
<td>53285</td>
<td>98.5</td>
<td>53397</td>
<td>98.7</td>
</tr>
<tr>
<td>Transient overspeed (&lt;5sec)</td>
<td>56280</td>
<td>104</td>
<td>56498</td>
<td>104.4</td>
</tr>
</tbody>
</table>

With 100%= 54117 rpm

Notes:
- Minimum stabilised speed: 35176rpm (65%).
- Refer to Installation Manual for required action if limits are exceeded

3.2. Power turbine speed (N2) (%):

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum stabilized</td>
<td>104</td>
</tr>
<tr>
<td>Maximum transient 5 sec.</td>
<td>108</td>
</tr>
<tr>
<td>Minimum stabilized</td>
<td>91</td>
</tr>
<tr>
<td>Minimum transient 5 sec.</td>
<td>83</td>
</tr>
</tbody>
</table>

With 100%= 45438 rpm corresponding to 6016 rpm at power off/take.
Notes:
- Minimum stabilised ground idle speed: 40000 rpm (88%).
- During starting, continuing operation within the 70 to 85% range is prohibited.
- Refer to Installation Manual for required action if limits are exceeded

4. Torque Limits (daNm)

<table>
<thead>
<tr>
<th>Power rating</th>
<th>1A/1A1</th>
</tr>
</thead>
<tbody>
<tr>
<td>2-1/2 minute OEI rating</td>
<td>68</td>
</tr>
<tr>
<td>30 minute /Continuous OEI rating</td>
<td>63</td>
</tr>
<tr>
<td>Takeoff</td>
<td>63</td>
</tr>
<tr>
<td>Maximum continuous</td>
<td>56</td>
</tr>
<tr>
<td>Transient overtorque (&lt;20 sec.)</td>
<td>77</td>
</tr>
</tbody>
</table>

5. Installation Assumptions:

Refer to Installation / Operating Manuals for details.

6. Dispatch Limitations:

All engine systems and equipment must be functional prior to aircraft take-off. Any engine system or equipment failure which would occur in flight shall be replaced or repaired prior to commencement of next flight.

V. Operating and Service Instructions:

<table>
<thead>
<tr>
<th></th>
<th>1A</th>
<th>1A1</th>

<td>X 319 U1 451 2</td>
</tr>
<tr>
<td>Overhaul Manual</td>
<td>X 319 H6 5002</td>
<td>(*)</td>
</tr>
</tbody>
</table>

(*) Overhaul must be done by SAFRAN HELICOPTER ENGINES until the Overhaul Manual is published.

VI. Notes

1. Ingestion of foreign matter:

The Arrius engines were not tested to evaluate the effects of foreign object ingestion. It is the Airframer’s responsibility to protect the engine from foreign object ingestion through the design of the aircraft air intake. The aircraft manufacturer must substantiate that the aircraft installation prevents foreign object ingestion by the engine, prior to the approval of the engine installation.
The Arrius engines do not have anti-icing provisions. They comply with the engine airworthiness requirements during icing conditions when aircraft air intake Part Number 355 A 543533 is installed.

2. EECU box

- Installation conditions:
  - The box shall be installed in the airframe outside the fire zone.
  - Refer to Installation Manual for others installation conditions.
- Lightning protection: refer to Installation Manual
- Electromagnetic interferences: tests carried out are specified in the Installation Manual.
- Software: The software has been developed and tested and the corresponding documentation developed according to the recommendations of document RTCA DO 178A/EUROCAE ED-12A to level 1.

3. Vibrations:

A probe can be mounted on the turbine case bracket: see Installation Manual.

4. Overspeed

The engine has an electronic free turbine overspeed system limitation.

5. “Training” function

The electronic control system provides a “Training” function for training crews in an engine failure condition. See the Installation/Operating Manual for the characteristics of this function.

6. Variant

1A was previously defined for certification purposes on DGAC F Engine Type Certificate and Type Certificate Data Sheet M-16 prior to being superseded by the EASA Type Certificate and Type Certificate Data Sheet.

7. Return to civil use

An Arrius 1A/1A1 engine coming from a user not controlled by a civil authority can be converted in an Arrius 1A for civil use. The compliance of such engines with the European rules enabling issuance of an aircraft standard certificate of airworthiness must be checked. Their configuration, including design changes and repairs, does not necessarily conform to the type definition approved by EASA, and it is possible that in operation they have exceeded the limits approved by EASA. The Arrius 1A is known to be installed on the EC355. Before a standard certificate of airworthiness is issued to an aircraft in which a converted Arrius 1A turboshaft engine is installed, an EASA Form 1 must be issued for the engine. This requires incorporation of SAFRAN HELICOPTER ENGINES Mandatory Service Bulletin A319 72 0802.
