

**FAQs:**

[Implementation and Integration](#) , [Automatic Dependent Surveillance — Light \(ADS-L\)](#)

**Question:**

**If my aircraft already has FLARM or a Mode S transponder, is ADS-L still beneficial?**

**Answer:**

Yes, ADS-L is beneficial even if your aircraft is already equipped with FLARM or a Mode S transponder. Alongside existing protocols such as FLARM, ADS-L provides a unified language that can be received by a maximum number of systems, enhancing situational awareness and safety. The use of ADS-L can also facilitate the integration of other systems and technologies.
