

SAFETY INTELLIGENCE DATA PROGRAMME

François LASSALE, HELIOFFSHORE, Operations Director

Presentation is about our data programme '*Safety Intelligence Data System*' (*SIDS*) and how important our link with EASA is, in your development in the D4S programme. I would like to talk about this, because it is current and relevant, it is a big project for both HeliOffshore and EASA, and it is the future of being able to identify the accident before it happens, become very targeted with our limited resources, drive for improved standards, assist better performance based regulation and become proactive and hopefully in the near future predictive.
