Appendix 1 to GM 4 SKPI Verification of ANSP EoSM by NSA/competent authority

			Effectiveness Levels					
ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement		
SA1 De	velopment of a positive and	proactive safety culture						
SA1-1	A positive and pro-active just, flexible, and informed safety culture (the shared beliefs, assumptions, and values regarding safety) that supports reporting and learning led by management.	Within the organisation, there are significant differences between what is said, what is done, and what is believed. The competent authority may be regarded as being responsible for safety.	Individuals within the organisation have a good level of systematic safety management awareness. The organisation is starting to put processes in place for systematic safety management.	All of Planning/ Initial Implementation plus: A positive safety culture is developing, although it is still immature. Individuals are starting to be involved in systematic safety management.	The organisation operates informed learning and reporting cultures, as well as a just culture with respect to errors in operations.	All of Managing & Measuring plus: Individuals across the organisation are proactively and constantly striving to improve their approach to systematic safety management. They are supported by measurement and review processes and organisational management. Experiences are openly exchanged internally and externally. Within the organisation, there is a complete alignment between what is said, what is done, and what is believed.		

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA1-1	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation	(human errors) are blamed for their failure to comply with rules. Disciplinary action may be seen as the best way to minimize the chance of employees making errors. Role of management is seen as endorsing the rules, pushing employees and expecting results. There may be an adversarial relationship between management and employees, with little trust or respect demonstrated. Problems are not anticipated; the organization reacts to each one as it occurs.	them to understand the underlying factors that contribute to accidents and incidents. Management, working with employees and unions, begins the development of investigative and other processes (such as over-the-shoulder checks, unit evaluations, etc.) for the purpose of improving the safety performance of the organisation. Management recognizes the importance of safety training and starts to develop employee	A positive safety culture is developing, although it is still immature. Individuals are starting to be involved in systematic safety management. Management believes that it is more important to understand what has happened than to find someone to blame. The organisation has developed operational rules and procedures to support a just culture and to encourage self reporting Management works closely with union representatives to ensure that labour relations are positive and that labour contracts do not contribute to a "punitive climate". The organisation is somewhat open to learning from other companies, especially techniques and best practices. Management recognizes that suppliers and contractors may impact safety performance, and looks to understand and	errors in operations.	Individuals across the organisation are proactively and constantly striving to improve their approach to systematic safety management. They are supported by measurement and review processes and organisational management. Experiences are openly exchanged internally and externally. Within the organisation, there is a complete alignment between what is said, what is done, and what is believed. Management's role is seen as coaching people to improve safety performance. Managers encourage employees to share information in order to assist with the further improvement of existing processes. Employees share safety- related information, even cases of human error that would probably not have been identified.

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
		"command and control". Processes are highly bureaucratic and centralized. Departments and functions behave as semi-autonomous units, with little collaboration or shared decision making. Conflicts are not resolved, departments and functions compete with each other. Safety is seen as a technical issue; mere compliance with rules and regulations is seen as adequate. There is a limited understanding of the hazards and risk associated with operations. There is limited understanding of the impact that changes may have on departments, functions,	be developed in isolation and are not as integrated and effective as they could be. Senior managers commit the organization to improving its safety performance, and agree on a safety vision. Senior managers formulate safety policy and communicate it to the workforce. Implementation is begun of a Safety Management System that looks to meet the needs of the organisation based on the CANSO Standard of	There is an expectation across the organization of co-operation	Employees report not only safety concerns but also their own errors. People are adequately trained to perform their safety related duties. Information flows more freely as hierarchies are flattened and rank defers to technical expertise during periods of high activity. People are willing to cross organizational boundaries to share safety information and concerns. The organisation invests heavily in the quality, motivation, and experience of its first-line supervisors. Processes are put in place to find ways to improve SMS integration across the organisation. The existence of conflict is recognized and addressed by searching for mutually beneficial solutions. There is no goal conflict between safety and production performance, so that safety is not jeopardized in pursuit of production targets.	All types of information are openly and proactively shared up and down as well as across the organization for the improvement of safety performance. Management cooperates with customers, suppliers, and contractors to improve their safety performance. When needed, the organisation can shift from centralized control to a decentralized mode in which the guidance of local operations depends largely on the professionalism of first-line supervisors. Management values and continuously encourages employees to forward ideas and suggestions for ways to improve safety performance. All individuals in the organisation feel personably responsible for safety. Senior managers make comparisons with external organisations chosen as benchmarks.

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
		Processes are highly bureaucratic and centralized. Departments and functions behave as semi-autonomous units, with little collaboration or shared decision making. Conflicts are not resolved, departments and functions compete with each other. Safety is seen as a technical issue; mere compliance with rules and regulations is seen as adequate. There is a limited understanding of the hazards and risk associated with operations. There is limited understanding of the impact that changes may have on departments, functions, or the safety performance of the organisation. There are limited, if any, means for measuring the safety performance of the organisation.		business. Managers establish safety performance measures and analyse statistics to establish trends. They share this information with employees. Critical mechanisms for	The organisation operates a best-inclass Safety Management System. There is a clear understanding of the hazards and risks associated with operations. It is understood that safe operations are the outcome of a positive interaction between Best Practices SMS and a sound safety culture. Decisions are made in full knowledge of their safety impact on work or processes as well as on department and functions across the whole organisation. Everyone is kept informed of and adequately prepared for changes that may affect safety. Safety performance targets are set, measured and weaknesses identified and addressed.	leadership role in creating and communicating the future safety vision for their organisation.
SA1-1	Possible verification questions	Why have you scored in x maturity Can you give examples of the situal What were the enablers to score x What needs to happen to move for What obstacles are you experiencing there anything that can be done Is there any regulatory input into your solution of the solution in the solution	ation? maturity level? ward? ng? to help you progress in this area? our Safety Culture? pacting your progress in implementing	g Safety Culture?		

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA1-2	Regular measurement of safety culture and an improvement programme.	The organisation does not see the need to have a safety culture measuring mechanism in place.	The organisation is aware of the need to have periodic measurements of safety culture in place, as well as an improvement plan. However, what will be measured, and when, is still being defined.	All of Planning/ Initial Implementation plus: Safety culture is measured and results are available. An improvement plan addresses the need for individuals to be aware of, and support, the organisation's shared beliefs, assumptions and values regarding safety.	All of Implementing plus: The organisation assesses its safety culture on a regular basis and implements improvements to any identified weaknesses. Safety Culture enablers and barriers are identified, and solutions to reduce barriers are being implemented.	All of Managing & Measuring plus: All personnel are pro-active and committed to improving safety. Safety Culture Surveys confirm that, within the organisation, there is a high level of alignment between what is said, what is done, and what is believed. Organisational management approves a continuous improvement plan.
SA1-2	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation	improve the organisation's safety culture. No consideration is given to the impact of culture on the safety performance of the organisation. The implementation of SMS may be negatively affected if areas of	on safety culture are being introduced to management. Management works with labour	cognizant of the need to address safety culture issues in order to support new SMS processes. Awareness campaigns and training on safety culture are introduced to all employees.	People are aware of the impact of cultural issues and consider these factors in key decisions. A wide variety of tools and processes (i.e., surveys, focus groups, evaluations, observations, etc.) are used to assess safety culture across the organization. Improvement plans shift towards using improved reporting to enhance the informed and learning cultures across the entire organisation.	Safety and production are seen as interdependent and not mutually exclusive. Top management is knowledgeable of the barriers and enablers to safety culture, and fully support efforts to eliminate barriers and enhance enablers. Safety culture assessment tools are used in a more targeted manner to further refine and enhance key safety culture enablers. Improvement plans look to all areas of the company, and focus on the flexible culture within the organization as well as enhancing the enablers to the other safety culture elements. People are rewarded for improving processes as well as results.

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA1-2		Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? If low maturity: Why do you think measurement is not needed? How do you ensure improvement if you do not measure? If signs of positive maturity level: How are measurements being done? What do you do with the measurements? Who are they available to? How are they made available?				
SA1-3	An open climate for reporting and investigation of occurrences.	no issues regarding the existing reporting and investigation culture and therefore does not see the need for any activity or dialogue with the staff in this area.	management to define an open reporting and investigation climate are underway. However, there is no agreed policy in place yet.	All of Planning/ Initial Implementation plus: Safety data-sharing and publication policies are supported by the staff. Safety data are sufficiently protected from external interference within legal limits.	All of Implementing plus: Within the organisation, the line between acceptable and unacceptable mistakes is established and known by the staff. Just reporting and investigation culture principles are in place and systematically applied within the organisation.	All of Managing & Measuring plus: Under certain legal regimes, there is a clear and published policy on how dialogue with judicial authorities and media is established and followed.

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA1-3	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation	Individuals do not feel sufficiently responsible for safety, see little benefit in reporting problems that they observe, and fear retribution. Reporting is limited, and focused on accidents and incidents as opposed to precursors. Management tends to dissuade employees from sharing "bad news". At the same time there may be the belief that no news is good news.	organization. Management's response to mistakes is to put more controls in place via procedures and retraining. There tends to be less blaming. Management, in close cooperation with union representatives and employees, begins development of a JC policy for all operational staff. Efforts are undertaken to improve management/ employee relations and to improve trust. Management begins to recognize the need for more safety information. Management begins discussions with union representatives to establish the processes necessary	The organization has a confidential safety reporting program that allows all employees to report safety concerns that they might have. The organization has established the necessary procedures, processes, and tools for collecting safety-related occurrence data. The organization has established the necessary	Reporting is not limited to accidents and incidents, but also extends to collection of precursor data, such as situations where there was no loss of separation but safety was not assured. The necessary action is taken to address safety issues that have been identified, and mechanisms are in place to provide prompt feedback to incident reporters. Honest information flows up the organisation, ensuring that management has the necessary information to make critical decisions; in other words, telling the truth is more important than looking good. Self-assessment of safety performance, including the application of the SMS along with a comprehensive corrective action programme, is established.	Senior management is focused on obtaining the safety data necessary to reduce the rate of serious incidents and accidents, and recognizes that collecting increasing quantities of precursor data is essential. Employees recognize the essential role of safety reporting, trust management to treat them fairly, and believe that their safety concerns will be investigated thoroughly and openly. Employees are comfortable reporting safety concerns directly to their supervisors, not just confidentially to the safety department. The organisation seeks to collect safety concerns not only internally but externally from stakeholders as well. Based on information gathered through SMS processes, the organisation has a realistic view of risk, and anticipates problems and deals with their causes before they occur.
			The organisation has committed to developing the necessary reporting system(s), including the allocation of appropriate resources.		Understanding achieved through a variety of means, including reporting, lessons learned, investigation, and self-assessment, is used to modify and improve safety processes throughout the organisation. Increased incident reporting, investigation, and analysis, and a proactive approach to understanding and addressing underlying factors and precursors, is likely to lead to an associated decrease in the most serious incidents.	Learning from outside the organization is valued. Time and resources are made available to acquire and adapt such knowledge to improve safety performance.

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA1-3	Possible verification questions	Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? If low maturity: Why does the management believe there is no need for an open climate? Is there an intention to put a policy regarding reporting and investigation of occurrences? If more positive maturity level: How is safety data protected? How is safety data published? How do staff feel about safety data being published? Who draws the line between acceptable and unacceptable mistakes? What mechanisms are in place for dialogue with judicial authorities?				
SA2 Or	 ganisational and individual s	afety responsibilities				
SA2-1		No formal designation of	All of Initiating plus: Safety authorities, responsibilities, and accountabilities have been identified but not yet formalised. Line managers assume responsibility for safety.	All of Planning/ Initial Implementation plus: Authorities, responsibilities, and accountabilities for the management of safety have been defined and documented. Delineation of responsibility for the development, oversight and implementation of the SMS is clearly understood.	the need to review safety authorities, responsibilities, and	All of Managing & Measuring plus: Safety authorities, responsibilities, and accountabilities are periodically reviewed to determine whether they are suitable and effective (i.e., continuous improvement of safety management).
SA2-1	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		Safety accountability procedure is in place. It may be associated with a list of staff who have safety accountabilities.	Safety accountabilities of senior managers are documented. Safety accountability matrix that shows a complete and consistent set of accountabilities is produced. The organisation can provide an evidence which shows that safety accountabilities are being discharged.	following any organisational	The organisation can provide an evidence that data on the effectiveness of safety management, and safety accountabilities and responsibilities of managers is gathered and used to drive a process of continuous improvement.

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement			
SA2-1	Possible verification questions	Can you give examples of the situs What were the enablers to score x What needs to happen to move for What obstacles are you experience	hy have you scored in x maturity level? an you give examples of the situation? hat were the enablers to score x maturity level? hat needs to happen to move forward? hat obstacles are you experiencing? there anything that can be done to help you progress in this area?						
SA2-2	A clearly defined safety management function that is independent of line management.	A safety management function has not yet been appointed to develop the SMS	All of Initiating plus: A safety management function has been appointed to develop and maintain the SMS.	is independent of line management and develops and maintains an effective SMS. The safety manager has access to the resources required for the proper execution and maintenance of the SMS.	All of Implementing plus: The highest organisational level recognises its role in the SMS and actively supports the development, implementation, maintenance, and promotion of the SMS throughout the organisation (including support departments).	All of Managing & Measuring plus: There is clear evidence that the highest organisational level plays a pro-active role in the continuous improvement of the SMS.			
SA2-2	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		The Safety Manager has been appointed. An SMS Implementation Plan has been produced. Governance structure for the SMS has been approved and published.	The organisation can provide an evidence that the Safety Manager is providing effective and efficient challenge to proactively manage safety within the ANSP SMS resource plan is in place. Safety Governance structures are in place (example - Review Board and Safety Action Group).	The organisation can provide evidences: • that the Safety Management System is fully embedded, within the organisation; • that Safety is considered in every investment decision; • of senior management support for safety.	Evidences exist that Safety and Safety Management has become a way of life in the organisation and drives decisions at all levels in the ANSP.			
SA2-2	Possible verification questions	Why have you scored in x maturity Can you give examples of the situs What were the enablers to score x What needs to happen to move for What obstacles are you experience Is there anything that can be done How is the SMS maintained, promise	ation? maturity level? rward? ing? to help you progress in this area?						

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA2-3	An integrated safety planning process is adopted by the organisation with published and measurable safety goals and objectives for which the executive is accountable.	planning process is utilised by the organisation. Safety goals and objectives have not been identified or documented for the implementation of a safety management system.	Identification of an appropriate SMS has been identified. A compliance gap analysis has been performed and a SMS Implementation Plan developed to meet the applicable safety regulatory requirements.	All of Planning/ Initial Implementation plus: The requirements expressed in the SMS Implementation Plan have been completed. The SMS meets the regulatory requirements, but may not incorporate best practices.		All of Managing & Measuring plus: The Organisation Safety Plan goals and objectives are developed and prioritized based on organisation safety risks which have been identified through trend analysis, risk assessment processes and identified system safety deficiencies. Where appropriate (considering ANSP size and complexity), the organisation is committed to share and implement ATM safety management international best practices.
SA2-3	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		Regulatory requirements are identified. SMS Implementation Plan is available. Evidence of gap analysis from established procedures to proposed SMS.	SMS Implementation Plan is completed. SMS is in place. Evidences can be provided that the SMS addresses the regulatory requirements.	Organisation Safety Plan is in place. Measurable safety goal/targets exists.	The organisation understands its major safety risks. The organisation Safety Plan identifies mitigations for key risks. The effectiveness of both SMS and Safety Plan are measured and the information used to improve them on a continuous cycle
SA2-3	Possible verification questions	Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? What were the results of the gap analysis? How are the organisation safety objectives defined? Who is accountable for safety objectives? How often are safety objective revisited?				

ID	Objective	Initiating	Planning/ Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement			
SA2-4	Clear understanding and acceptance of safety management responsibilities by all staff and contractors. Commitment to continuous improvement to safety.		All of Initiating plus: All staff and contractors apply rules and procedures to their tasks in the knowledge that some of the rules and procedures need improvement. All staff and contractors are only partially aware of their roles in the SMS.	All of Planning/ Initial Implementation plus: All staff and contractors are aware of how their actions impact the safety of the wider operation and how the actions of others impact safety.	All of Implementing plus: All staff and contractors across the organisation are actively promoting and improving safety. All staff and contractors take proactive day-to-day action to have rules and procedures changed where they identify a safety benefit by the change.	All of Managing & Measuring plus: The organisation regularly reviews and assesses documented safety management responsibilities.			
SA2-4	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		Staff are beginning to become aware of the importance of a formal safety management system. Evidence exists that procedures that are available as part of the developing SMS are starting to be applied.	The organisation can provide evidence that staff and contractors are aware of how they all contribute to the safety of the operation and why it is important that a formal SMS is agreed and applied.	Evideces exists that: - Safety and Safety Management is now a core discipline within the organisation; - Safety is one of the key considerations in every part of the ANSP from project, operational unit to finance and HR.	Evidence exists that the effectiveness of safety management system is continually assessed and the data gathered used in a cycle of continuous improvement.			
SA2-4	Possible verification questions	Can you give examples of the situal What were the enablers to score x What needs to happen to move for What obstacles are you experiencials there anything that can be done How do you make staff and contra How do you know how much indivi	Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? How do you make staff and contractors aware of the SMS? How do you know how much individuals are aware of how their actions impact the safety of operations? Give examples of individual actions for SMS improvement?						
SA3 Tir	nely compliance with interna	tional obligations.							
SA3-1	A formal SMS that meets all applicable safety-requirements.	There is no SMS in place. There may be deviations from safety requirements.	All of Initiating plus: The SMS is partially implemented, but it is not yet effective; it does not yet meet the safety requirements.	All of Planning/ Initial Implementation plus: The essential parts of the SMS are implemented, and the organisation meets the-safety requirements.	All of Implementing plus: The SMS is fully implemented and effective. Operations are monitored regularly to identify deviations.	All of Managing & Measuring plus: Where applicable, the organisation is committed to going beyond compliance and operating at the highest international safety standard.			

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement		
SA3-1	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		ANSP has a plan to implement a SMS and is working towards the goal through a prioritised program.	SMS in place is compliant to the requirements.	The SMS is an effective management system which is assisting in decision making at the every highest levels.	The ANSP has recognised that there is benefit for its operations in having a mature SMS. There is a plan in place for reaching the highest international safety standards.		
SA3-1	Possible verification questions	Can you give examples of the situate What were the enablers to score x What needs to happen to move for What obstacles are you experiencials there anything that can be done	Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? On you have any intention to go beyond the regulatory requirements? (If yes, further explanation could be requested)					
SA3-2	An organisation that strives to go beyond compliance, takes into account the need to ensure, in a timely manner, that there are no inconsistencies with European or national requirements or international safety standards.	regional or international safety standards.		All of Planning/ Initial Implementation plus: European or national requirements or international safety standards are known and met as required.	All of Implementing plus: There is a process in place to address the need for timely and consistent compliance with European or national requirements or international safety standards.	All of Managing & Measuring plus: The organisation has a structured mechanism to address the need for ongoing and consistent compliance with European or national requirements or international safety standards. It contributes to a European, national or international dialogue to improve these requirements or standards.		
SA3-2	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		A gap analysis has been completed, and areas of non-compliance are known and prioritised for action.	Compliance differences have been filed.	The organisation is compliant with new requirements ahead of the effective date. Embedded management processes (including audit) monitor practices to test internal compliance.	The organisation can identify area of its operations which further legislative requirements are needed to improve safety standards.		
	Possible verification questions fety standards and procedur	Why have you scored in x maturity level? Can you give examples of the situation? What were the enablers to score x maturity level? What needs to happen to move forward? What obstacles are you experiencing? Is there anything that can be done to help you progress in this area? How do you follow the on-going development of European requirements and international standards? Could you provide an example of implemntation of safety requirement before it enters into force?						

ID	Objective	Initiating	Planning/Initial Implementation	Implementing	Managing & Measuring	Continuous Improvement
SA4-1	standards and procedures.		All of Initiating plus: The documentation of SMS processes and procedures has started and is progressing as planned.	All of Planning/ Initial Implementation plus: The documentation of the essential parts of the SMS processes and procedures is complete. The processes and procedures ensure that the organisation is compliant with all applicable safety and regulatory requirements.	All of Implementing plus: There is clear evidence that the safety and safety management documentation is readily available to all personnel in the organisation. This documentation details safety and safety management processes and procedures that meet or exceed the applicable safety and regulatory requirements.	All of Managing & Measuring plus: Processes are in place and are being applied to give effect to the organisation's commitment to continuously improve safety and safety management processes and procedures.
SA4-1	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation		SMS Policy Statement is in place Documented SMS Framework SMS Initial Implementation Plan is adopted Initial SMS Documentation exists	Documented Compliance with Regulatory requirements	SMS published and available to all staff in the organisation Identification of best practice Compliance with best practice – to exceed regulatory requirements	The effectiveness of the organisations safety standards and procedures is measured and procedures are regularly updated to ensure that they reflect evolving best practice – i.e. better, cheaper, quicker and more effective. Benchmarking against external organisations and sharing of best practice is an on-going activity.

SA8 Sa	fety reporting, investigation					
SA8-1	A continuing organisation-wide process to report and investigate safety occurrences and risks.	There is an informal system in place for reporting safety occurrences and risks, but reports are not reviewed systematically. The reporting system is not organisation-wide. Investigation is done on an adhoc basis and with little or no feedback.	existing reporting and investigation system. There is commitment from management to allocate resources to implement this system. The reporting system is wide-spread but does not yet cover the whole organisation. Feedback is given on an ad-hoc basis.	All of Planning/ Initial Implementation plus: The system in place is commensurate with the size of the organisation. The organisation has a complete and formal system that records all reported information relevant to the SMS, including incidents and accidents. Corrective and preventive actions are taken in response to event analysis.	All of Implementing plus: Identified safety-related risks and deficiencies are actively and continuously monitored and reviewed for improvement.	All of Managing & Measuring plus: Personnel who report safety occurrences, risks and problems are empowered to suggest corrective actions, and there is a feedback process in place.
SA8-1	Outcomes of the objective fulfilment which may be considered applicable for each level of implementation	There are gaps in the organisation's knowledge of its performance. There is an incomplete investigation regime which means that some deficiencies are not rectified when they become visible. Potential of organisation learning is limited by the safety system inadequacies.	The organisation has committed to and resourced an organisational wide reporting and investigation system.	A reporting and investigation regime is established, improvements are however only able to focus on findings from investigations of incidents and accidents due to the scope of the reporting system.	The reporting and investigation system is continual development and embraces accident, incidents and hazardous situations. The organisation's process and system improvement cycle is embedded.	A confidential reporting system is in place with feedback processes to those who raise safety concerns
