EASA Type Certification for the PW308A/308C engine models is granted, in accordance with article 2 paragraph 3 (a)(i) of EU Commission Regulation EC 1702/2003, based on a German validation letter issued following the JAA Validation Recommendation on 01 August 2002.
II. Certification Basis

1. EASA Certification Basis

1.1. Airworthiness Standards

PW308A

PW308C

1.2. Special Conditions (SC)

PW308A
SC1 - Inclement Weather

PW308C
none

1.3. Equivalent Safety Findings

JAR-E 890 Thrust Reverser Endurance Tests

1.4. Deviations

JAR-E 570(a)(3) Oil System - oil pump inlet strainers

1.5. Environmental Protection

Emissions and Fuel Venting: CS-34 Amendment 4 as implemented by ED Decision 2021/011/R (applicable 25 July 2021), ICAO Annex 16 Volume II, Amendment 10 applicable 1 January 2021 as implemented into EU legislation 27 April 2021. NOx standard in accordance with ICAO Annex 16 Volume II, Part III, Chapter 2, § 2.3.2 e) (CAEP/8). Maximum nvPM mass concentration levels in compliance with Part III, Chapter 4, paragraph 4.2.2.1. nvPM mass and number emissions in compliance with Part III, Chapter 4, paragraph 4.2.2.2 a) 1) and 4.2.2.2 b) 1) (CAEP/11 In-Production standard).
III. Technical Characteristics

1. Type Design Definition

PW308A: Engine Assembly Parts List No. A30C2000-01
PW308C: Engine Assembly Parts List No. A30C3205-02 for Build Spec 1047
A30C3205-03 for Build Spec 1289

2. Description

Dual spool turbofan engine consisting of a 4-stage axial and single stage centrifugal high pressure compressor driven by a two stage high pressure turbine. The single stage wide chord fan is driven by a 3-stage low pressure turbine, annular combustion chamber, accessory gearbox and Full Authority Digital Engine Control (FADEC).

3. Equipment

For details of equipment included in the type design definition: refer to Installation Manual.

For details of equipment and nacelle hardware supplied by the Airframe TC holder that may be mounted on or driven by the engine: refer to Installation Manual.

4. Dimensions

</table>

5. Dry Weight

PW308A: 622,3 kg PW308C: 623,5 kg, excluding all fluids and buyer furnished equipment.

6. Ratings

The ISA sea-level static thrust ratings are:

Take off ratings quoted valid up to 37°C (PW308A); 38°C (PW308C), maximum continuous ratings to 28°C (PW308A); 32°C (PW308C)
7. Control System

Engine control system comprises an Dual Channel FADEC

8. Fluids (Fuel, Oil, Coolant, Additives)

8.1. Fuel and Additives

For approved fuel types refer to relevant Maintenance Manual.

8.2. Oil

For approved oil types and additives refer to relevant Maintenance Manual.

1.2 **Oil Temperature**

Refer to Installation Manual Table 2-1.

1.3 **Fuel Temperature**

Refer to Section 6 of Installation Manual.

2. **Pressure Limits**

2.1 **Oil Pressure**

Refer to Installation Manual Table 2-1.

2.2 **Fuel Pressure**

Refer to Section 6 of Installation Manual.

3. **Maximum Permissible Rotor Speeds:**

VI. Notes

1. The engine ratings are based on dry sea-level static ICAO Standard Atmospheric Conditions, no airbleed and no external accessory loads. The engine ratings specified are obtainable on a test stand with the specified fuel and oil, without intake ducting and using exhaust duct and intake specified in the Installation Manual.

2. Life limited parts are listed in the relevant Maintenance Manual, Airworthiness Limitations Section.

3. The software for the Electronic Engine Control has been developed and tested in accordance with provisions of level A as defined in RTCA DO 178B.

4. The PW308A and PW308C engines are approved for multiple engine installation only.

5. The engine definition does not include a thrust reverser. Considerations for the installation of a thrust reverser are contained in the relevant Installation manual. The PW308A engine is approved for use with the NORDAM Thrust Reverser P/N 01ND-78002, the PW308C engine is approved for use with the NORDAM Thrust Reverser P/N 06ND-78002.

7. The PW308A and PW308C engines can be operated with certain detected FADEC faults in accordance with TLD policy. Aircraft considerations are contained in the Installation Manual, and Time Limits are contained in the Airworthiness Limitations Section of the Maintenance Manual.

8. The PW308C engine is designed to be normally used at Take-off thrust (called “normal take-off”) of 3113 daN with an ITT limit of 875°C. An automatic power increase to the certified Take-off thrust is provide in the event of one engine inoperative. The limitations stated for “normal take-off” are to ensure that the certified Take-off limitations are not exceeded in the event of an automatic power increase to take-off thrust. Refer to Installation Manual, Table 2-1.

9. The take-off ratings that are normally limited to 5 minutes duration may be used up to 10 minutes for one engine inoperative without adverse effects upon engine airworthiness. Such operations are anticipated on an infrequent basis (as engine failure events during take-off are uncommon). Refer to Engine Maintenance Manual Chapter 05-10-00 for any subsequent maintenance actions.
