European Union Aviation Safety Agency

FAQ n.104962

FAQs:

Lithium Batteries, Supplemental Type Certificates

Question:

Lithium Battery: Will EASA mandate actions against existing designs?

Answer:

EASA is currently gathering information about existing installations and working with FAA to determine the potentially existing hazardous cases. The need to mandate actions against some specific designs is still under review and no decision has been taken yet.

In case of specific incidents, EASA is already issuing Airworthiness Directives to improve some current installations in a case by case basis.
