

Immersive Technologies in Aviation Training

online event

Organised by: EASA & Halldale Group

Date:

30 Sep 2021 to 01 Oct 2021

Description

Date & time

30/09/2021, 09:00 - 14:00 CET (UTC +2)

01/10/2021, 09:00 - 13:00 CET (UTC +2)

Description

Join EASA and the Halldale Group as we explore Immersive Technologies in Aviation Training.

During this two-day virtual event, you will hear from training community leaders who will review XR training technologies for Fixed & Rotary wing, Cabin, and Maintenance training, including approval and implementation.

Virtual Reality, Mixed, Augmented, and Extended Reality technologies are moving at an extremely rapid pace and with the key barriers of fidelity and 'simulator sickness' solved they offer potential training solutions at extremely attractive costs offering a much-improved return on investment than traditional devices.

The ongoing pandemic has increased pressure on our community to achieve more at less cost while improving training quality, and the recent approval of the first VR training device for rotary pilot training by EASA is significant and indicates what may be done with these 'game changing' technologies.

During the two days of the event, EASA and industry leaders will explore the potential for these new Immersive Technologies and how they may be integrated into training programs, including the development of new curriculums in support of other key industry initiatives such as EBT.

We look forward to welcoming you.
