European Union Aviation Safety Agency

FAQ n.137682

FAQs:

Easy Access Rules XML

Question:

Could you please explain how the <toc> elements work? Do they have their own IDs?

Answer:

The toc container elements illustrate how the topics are arranged hierarchically – they illustrate the table of content structure that the topics are placed in. All the topic and child toc elements for a particular toc element are contained inside a toc element.

They do not have an ID on their own – as opposed to the topics which all have IDs.
