Detection of Lithium Batteries Using Security Screening Equipment- Project Webinar 18.10.2023 - Presentation

Detection of Lithium Batteries Using Security Screening Equipment- Project Webinar 18.10.2023 - Questions & Answers

Description

The webinar is organised to introduce and present the key objectives of the EASA research project “Detection of Lithium Batteries Using Security Screening Equipment”.

This project is funded under the Horizon Europe Work Programme 2021-2022. In that Work Programme, the European Commission has entrusted EASA with the management of six research actions with a budget of EUR 14.2 million.

This project will evaluate the feasibility of detecting lithium batteries transported as checked baggage using hold baggage screening equipment and processes in operation at airports.

Speakers

Safety and security experts from EASA and the Consortium contracted to deliver this research project, including: Rapiscan Systems Limited, CAA International (CAAi).

Agenda

18/10/2023, 10:30 - 12:30 CEST (UTC +2)

- Introduction
- Welcome from EASA
- Introduction to the project team
- Project overview
- Project delivery, including performance of tests and collection of data
- Project success
- Feedback, questions, and answers
- Close

Registration

The webinar is open to European aviation stakeholders. All persons who wish to attend must use their **professional email addresses** for registration purposes.

Registrations that are not clearly linked to an official email address from an aviation-related organisation **will be rejected**.

By registering for this event, you consent for your registration data to be shared with CAAi, who is coordinating the organisation of this webinar. Your data will only be used for the purposes of this webinar.

The webinar will be hosted by CAAi using Microsoft Teams. After registering, all webinar-related email communications will be addressed from the “Civil Aviation Authority”.
