

Air Traffic Management / Air Navigation Services (ATM/ANS) ground equipment

Application for DPO

Our product will require certification under the new framework and our company would like to become an approved Design or Production Organisation. COMMISSION IMPLEMENTING REGULATION (EU) 2023/1769 includes DPO.OR.A.010 which states: "An application for a design or production organisation approval shall be made in a form and manner established by the Agency". Where can I find these forms, and how does the application process work in practice?

Answer

The “Application for Design or Production Organisation (DPO) Approval” is now available on the EASA Application Services website. Organisations that are interested to become an approved DPO can find the new form (FO.AOA.00085) on the [Application forms website](#). Detailed instructions to help applicants fill in the form are embedded at the bottom of the form itself. Additional information related to DPO and other ATM/ANS topics can be found on the [EASA ATM website](#).

As always, any queries related to the approval of an ATM/ANS Organisation, ATCO Training Organisation, or Design or Production Organisation (DPO) can be sent to: AtmAnsOrg [at] easa.europa.eu.

The process of becoming an approved DPO begins when an organization submits an application. Once an application is received and accepted, an EASA project team will be created and assigned to the project. It is also possible to schedule a “pre-application” meeting with EASA to clarify specific points before an application is formally submitted. However, please be aware that your project schedule may need to accommodate delays that result from scheduling constraints.

If a manufacturing company has several subsidiaries in several countries, is a DPO certificate expected for each of the subsidiaries or would there be a way to get an overall for the entire company?

Answer

Any natural or legal person who has demonstrated, or is set to demonstrate, their capability to design or produce ATM/ANS equipment, may apply for a **design or production organisation approval** under the conditions laid down in EU IR 2023/1769.

In this context, if the legal entity has formalized control over other legal entities (i.e., subsidiaries), then these subsidiaries can be covered by the DPO approval. For example, if the legal corporate entity (aka the “parent company”) submits an application as DPO, then it can choose to include subsidiary organisations under Section 2.3 “Additional Locations” on the DPO application form.

However, be aware that this is not simply a matter of legal definition on paper. The DPO applicant must demonstrate that all subsidiaries are also meeting the requirements needed for DPO approval (e.g., competencies, procedures, etc).

In accordance with ATM/ANS.EQMT.CERT.005 on Eligibility, any natural or legal person who has demonstrated, or is in the process of demonstrating (i.e. is an applicant), their design capability in accordance with point ATM/ANS.EQMT.CERT.010, may apply for the **issuance of an ATM/ANS equipment certificate**.

A DPO needs an organisation approval at latest by September 2028, but it could already apply now. Formally speaking, the certification process of an ATM/ANS equipment could be launched during the DPO approval process. However, it should be noted that the certificate of ATM/ANS equipment could be issued by EASA only after the DPO is approved. The same applies for an ATM/ANS equipment declaration of design compliance; the DPO could issue the declaration but only after the DPO approval is completed and issued.

<https://www.easa.europa.eu/en/faq/139154>

Which cost can be expected to perform a DPO approval? (external cost, e.g.

to be paid to EASA)

Answer

An estimate of workload connected with the approval procedure is provided by EASA as part of the quotation that may be requested in the application. As DPO is an entirely new domain for the Agency, these activities in accordance with the principles in the F&C regulation will be charged on an hourly rate basis. This is stated under Chapter IV, Article 21, Subparagraph 2 (page 10 of Regulation 2019/2153):

“The hourly rates set out in Part II of the Annex shall apply as of the entry into force of this Regulation to any tasks ongoing at the entry into force of this Regulation and for which fees or charges are calculated on an hourly basis.”

The level of effort depends on a number of specific factors linked to the organization itself and the type of equipment under consideration, so the assessment is done based on the documentation and exposition of activities accompanying the application. This is why EASA only provides detailed estimates in conjunction with a submitted application. The following provides additional detail:

- An applicant is entitled to request a financial quotation, and the Agency will provide the quotation before starting the investigation. This ensures that the DPO applicant has all the financial elements to make a business decision. An applicant can request a financial estimate (including working hours) via point 8 of the Application form. After submitting the application, EASA will reply with a quotation of estimated cost. Invoicing will be done based on the actual effort.
- The production of the estimate should not last more than a few working days, in parallel to the assessment of technical and administrative eligibility of the application, and the information is provided to the applicant. Procedurally, there is a maximum period of 90 days for the applicant to evaluate the quote and accept it.
- If the applicant would decide not to accept the quotation, there would be no fees/charges incurred. The investigation would start once the quotation is accepted.
- It is also important to be aware that an approved DPO organisation will incur additional costs under the EASA oversight activity. This oversight activity will also be invoiced for hours worked and travel costs.

If an organization has other questions linked to filling out the DPO application forms or about the logic applied to the initial investigation in order to better prepare the approach, it is possible to schedule a “pre-application” meeting with EASA to clarify specific points before an application is formally submitted.

In order to apply for EASA acceptance of a Federal Aviation Administration (FAA) approval, does our company have to be an EASA-approved design or production organisation (DPO) beforehand?

Answer

The current EU-USA Bilateral Agreement and the EASA-FAA Technical Implementation Procedures (TIP) do not address ATM/ANS ground equipment conformity assessment and ATM/ANS design or production organisation approval.

In accordance with ATM/ANS.EQMT.CERT.005 'Eligibility', any natural or legal person who has demonstrated, or is in the process of demonstrating (i.e. is an applicant), their design capability in accordance with point ATM/ANS.EQMT.CERT.010, may apply for the issuance of an ATM/ANS equipment certificate. This includes non-EU (e.g., US) stakeholders.

<https://www.easa.europa.eu/en/faq/139156>

In order to perform maintenance and provide support of equipment produced by our company and that is already deployed in Europe, does our company need to be an approved design or production organisation (DPO)?

Answer

Responsibilities in relation to 'routine maintenance' are in the sphere of the ATM/ANS provider's responsibilities as prescribed under Regulation (EU) 2017/373, and are performed following the instructions/manuals provided by the design and production organisation of the equipment.

Therefore, there is no need to become an approved DPO in order to perform the maintenance.

In contrast, a change to already deployed equipment must be performed in accordance with Regulation (EU) 2023/1768. During the transition period, the air navigation service provider (ANSP) may change the equipment using a 'Statement of Compliance'. However, after the

transition period, the implementation of changes for equipment subject to Article 4 or 5 will require an approved DPO.

<https://www.easa.europa.eu/en/faq/139157>

What about home-made ANSP equipments? Does the ANSP need to be accredited as a DPO?**Answer**

It depends on the criticality and the categories. For example, Air/Ground communication is certified equipment, so it needs to be certified. If it involves AIS or MET, then there are two possibilities: a Statement of Compliance can be issued by the ANSP, or the ANSP can contract this to an approved DPO.

Last updated:

04/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139162>

If an ANSP designs and builds an integrated system, e.g. integrating software from various suppliers onto a data centre infrastructure (noting this may involve "DPO" activities, and some specifications can only be fully implemented/verified at this level) is the ANSP expected to certify as a DPO?**Answer**

In those cases, yes, the ANSP has to be certified as an approved DPO to have those privileges.

Classification or notification of changes

Major and minor changes (Major/Minor changes) - the description of what is a major and what is a minor change (for major changes, the need to issue an SoC/Declaration/Certificate) is defined in general terms in the regulatory proposals. There was no consensus on the interpretation at the EASA webinar. It is necessary to define the criteria for including the change in the big/small category

Answer

The definition of major/minor changes are provided at the AMC/GM level. Further details on the delineation between minor and major changes will be clarified in the forthcoming set of AMC/GM associated to Regulation (EU) 2023/1769 and apply regardless of when the system was deployed/implemented.

Last updated:

03/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139159>

The new regulation does not require a notification and documentation of a small change - in cases where the SoC is not changed. A different approach compared to today's DoVs, which cover the entire life cycle of a component/equipment - for small changes, a TF change is made. Will this create a problem at the end of the transition period? – TF will not be updated and SoCs will only have some changes

Answer

The details for the notification and management (incl. documentation) of minor changes are illustrated at AMC/GM level.

Link:

<https://www.easa.europa.eu/en/faq/139160>

What should an air navigation service provider (ANSP) expect to receive from a design or production organisation (DPO) for minor changes that are not notifiable to EASA and do not result in an update to the certification, and is the ANSP still expected to notify these minor updates as changes to the functional system?

Answer

The DPO is eligible to design and implement minor changes to its CERT/DECL equipment, but has to notify these changes to EASA in any case.

The DPO is required to communicate to the ANSP any update to the technical manuals and maintenance instructions of the equipment.

The ANSP is responsible to notify a change to the functional system in accordance with the change management procedure approved by the competent authority, which may or may not require prior approval.

Acceptance of approvals issued by third countries

Some of the equipment produced by our company has a Federal Aviation Administration (FAA) approval and some equipment does not. For the FAA-approved equipment, can you confirm that our company can apply to have the FAA certification accepted by EASA?

Answer

It is acknowledged that there is an EU-USA agreement on cooperation in the regulation of civil aviation safety (i.e. via a Bilateral Aviation Safety Agreement (BASA)). However, there currently are no Technical Implementation Procedures (TIP) for ATM/ANS equipment in place to allow direct acceptance/recognition of FAA approvals/certificates.

Categorisation of systems or equipment

We are still not sure, in which category some specific equipment falls and thus we would appreciate a more detailed allocation oversight of specific systems to categories (e.g. electr. flight strips; network equipment, Server HW, virtualisation and operating systems, used for all kinds of systems).

Answer

First step is to assess the scope of the equipment and which function it supports. This assessment will determine the category to which it belongs.

Division of today's EATMN components into CA categories. For some existing systems, the categorization is debatable (e.g. EFS). Does the new regulation require anything similar as so called “distribution of systems and constituents within the functional system”?

Answer

The new regulatory framework clearly defined the ATM/ANS equipment subject to the various attestation methods – certification/ declaration of design compliance and statement of compliance. The scope will be further illustrated at DS/AMC/GM level.

<https://www.easa.europa.eu/en/faq/139168>

Does a primary surveillance radar (PSR) being provided to the European Union require certification under Regulation (EU) 2023/1768? If so, are there

any published detailed specifications (DSs) for PSRs?

Answer

No, the PSR that only performs the surveillance function does not require certification.

Since the PSR is used to provide surveillance data for the purpose of ensuring safe and interoperable air navigation, it is considered ATM/ANS equipment that falls under Article 5(1)(b) of Commission Delegated Regulation (EU) 2023/1768. Therefore, a PSR would require a declaration of design compliance (see also Annex III to Regulation (EU) 2023/1768) rather than certification.

At the moment, DSs only contain general requirements for PSRs, but no specific technical requirements. However, DSs will follow regular updates in accordance with Rulemaking Task (RMT).0744.

<https://www.easa.europa.eu/en/faq/139169>

Does the European Union Aviation Safety Agency (EASA) provides for the possibility of Air Traffic Management / Air Navigation Services (ATM/ANS) equipment supporting multiple functions, which falls into different categories and hence is subject to more than one attestation method?

Answer

EASA provides for the possibility of ATM/ANS equipment supporting multiple functions, which falls into different categories, and in such case, the attestation process for the highest-severity function would apply. For example, if one piece of equipment hosts two functions (one falling under certification and one under declaration), then the equipment would follow a certification process.

10/05/2024

Link:

<https://www.easa.europa.eu/en/faq/139827>

Article 4 states that "equipment supporting air traffic control (ATC) services when enabling the separation of aircraft or the prevention of collisions" should undergo certification. And Article 6 specifies that system used for meteorological services (MET) should have a statement of compliance (SoC) that "...supports air traffic services, communication, navigation or surveillance services, airspace management, air traffic flow management, aeronautical information services or meteorological services." Is the weather system used in towers classified as a system that "prevents collisions" (with the ground) or as a MET system? Should the system provide the controller with the wrong mean sea level pressure (QNH) or misleading runway visual range (RVR), it could have an impact on the separation. We all remember the incident in Paris where the wrong QNH almost led to an accident. How should it be classified? For certification or SoC?

Answer

GM1 Article 4 Certification of ATM/ANS equipment; Article 5 Declaration of design compliance of the ATM/ANS equipment; Article 6 Statement of compliance of the [AMC & GM Regulation \(EU\) 2023/1768](#) at Issue 1 provides examples of which means of conformity assessment applies to various types of ATM/ANS equipment.

Item 8 of the table in GM1 notes that meteorological services (MET) typically fall under Article 6 "Statement of Compliance".

Last updated:

13/08/2024

Link:

<https://www.easa.europa.eu/en/faq/140275>

Regarding ED Decision 2023/015/R, Annex I (DS-GE.CER/DEC), in Part 3 – ATM/ANS Equipment Subject to Design Conformity Declaration, Subpart C – Surveillance (SUR), Section 1 – General, point DS GE.DEC.MSS.101 "Scope", three types of technology are listed: (a) Mode S; (b) ADS-B; (c) WAM. Does this refer to a classification of ground equipment? Or does it refer to which technologies/functionalities are applicable to each ground equipment? For example, if a multilateration system utilising Mode S is available, which

standards would apply? Would the standards listed in Section 4 – Wide Area Multilateration be applicable? Or are the standards listed in Section 2 – Mode S ground station (MSS) also applicable?

Answer

The three technologies listed under **Part 3, Subpart C, Section 1** should be understood as falling under Article 5, subparagraph 1, of Regulation (EU) 2023/1768. Article 5 applies to equipment that "...generates, receives, and transmits data and/or signals in space for the purpose of ensuring safe and interoperable air navigation...". Therefore, the three technologies require a **declaration of design compliance** in order to be integrated by an air traffic management (ATM)/ air navigation services (ANS) provider in their functional system.

Section 1 – GENERAL is applicable to all equipment falling under Subpart C (i.e. Mode S, ADS-B, and WAM). In the case of a multilateration system utilising Mode S, Section 2 and Section 4 would be applicable.

However, Section 4 of DS-GE.CER/DEC at Issue 1 does not contain any requirements at this time. Since DS-GE.CER/DEC does not impose specific standards that must be included in the declaration, the applicant may select an appropriate standard. The same would be true for equipment that is not listed under Section 1 – GENERAL.

Note: EASA has planned Rulemaking Task RMT.0744 to prepare **Issue 2 of DS-GE.CER/DEC**, which will add requirements to Section 4. At this stage, EASA cannot specify which standard might be applicable.

13/08/2024

Link:

<https://www.easa.europa.eu/en/faq/140276>

Is the video wall included in the attestation process, and if so, under what level of attestation?

Answer

To determine the appropriate attestation category (i.e., certification, declaration, statement of compliance), one needs to define the intended function of the equipment and the tasks that are expected to be performed with it. For example:

- If the intended function is to provide a means for controllers to inform aircraft about

environmental conditions on the runway surface or general information on traffic (e.g. FIS), then one can reasonably conclude that the appropriate attestation is Article 6 (1) Statement of Compliance.

- If the intended function is to provide a means for controllers to visually observe the manoeuvring area in order to enable separation and prevent collisions, then the appropriate attestation is Article 4 Certification.

In cases where equipment fulfils more than one intended function/task, the DPO should select the attestation level that corresponds to the most critical function/task. For example, if the equipment provides both intended functions/tasks described above, then Article 4 Certification would be the most appropriate attestation.

Performance specifications and minimum requirements (i.e., MOPS and MASPS) for many aspects of Remote Tower installations (e.g., image quality, integrity, latency) are not yet available and/or harmonized in industry standards or the EASA detailed specifications. In the absence of such materials, the DPO should use engineering judgement to identify/define and justify performance objectives and technical specifications. These should be proposed to EASA or the National Competent Authority for review and acceptance.

20/03/2025

Link:

<https://www.easa.europa.eu/en/faq/141756>

Categorisation of software

For surveillance (SUR) equipment, e.g. ADS-B station, there is also processing equipment (including software) for at least converting the received signal to ASTERIX. Does this mean that this equipment will always be subject to certification by EASA?

Answer

The key criteria for the equipment is the intended function that the equipment supports. Software (SW) per se is not always subject to certification but the function the SW supports. If the intended supported function is not subject to certification, then the SW is not required to undergo the certification process. In the example, an ADS-B station will support the SUR function, and thus, as per Article 5 of Regulation (EU) 2023/1768, the equipment (including the associated SW) will be subject to a declaration by a design or production organisation (DPO).

GM1 GE.GEN.003 'Software': It is stated that firmware is considered as software. Is this also the case for libraries, operating systems, enterprise service bus (in service-oriented architecture (SOA)), security software, and all software used for virtualisation (e.g. VMware)?

Answer

Yes, if those are part of the equipment definition that is subject to the certification/declaration process.

Last updated:

04/04/2024

Link:<https://www.easa.europa.eu/en/faq/139613>

Commercial off the shelf (COTS) systems or equipment

Is it correct to assume that COTS IT/network elements (e.g. servers, routers, switches) do not have the need for certification or declaration, if they are not part of the equipment subject to certification/declaration? E.g. certified software is delivered by DPO, which can be run on any platform/network at the ANSP, which is not certified but fulfils the specifications provided by the DPO.

Answer

Boundaries of the system / constituent are defined by the DPO. As such, COTS IT equipment can be well outside of the system subject to certification / declaration. Such system can be composed of SW only.

When a certain equipment requires underlying/supporting infrastructure (e.g. IT, network, cloud), the characteristics and requirements for this infrastructure are to be defined by the DPO and provided to the ANSP with the installation and operation instructions and any other

integration requirements. The underlying infrastructure does not necessitate to be part of the equipment design and therefore does not necessarily form part of the certification envelope.

<https://www.easa.europa.eu/en/faq/139171>

Cloud-based architectures

How the case of an ANSP cloud based architecture and a SW application produced by a DPO which is subject to certification or declaration will be handled ?

Answer

The ANSP has to demonstrate to meet the functional requirements and the interface requirements. If the system is cloud based, then it is possible that the information security aspects may require specific scrutiny. However, the requirements are not dictating any specific architecture or HW/SW.

<https://www.easa.europa.eu/en/faq/139173>

Development Assurance for Software or Hardware

Who is going to define software / software assurance level (SWAL) requirements for a particular ATM/ANS system? EASA, ANSP, ...?

Answer

The design or production organisation (DPO) should anticipate the SWAL that is expected by the air navigation service provider (ANSP). This SWAL needs to be incorporated into the DPO's software development process of the equipment. The EASA attestation is granted according to that SWAL. It is the responsibility of the DPO to declare the SWAL that will be followed for the development of the equipment. This needs to be documented by the DPO in the certification programme.

The ANSP has the responsibility to select equipment in accordance with the safety assessment and the SWAL requirement for the functional system.

Last updated:

04/04/2024

Link:

<https://www.easa.europa.eu/en/faq/139175>

Did I understand correctly that the software assurance level (SWAL) assignment and stating that the equipment is safe for use is moved to design or production organisations (DPOs)? I got that impression from previous sessions and disagree since safety (as security) depends on the operational usage of the equipment. What is your opinion?

Answer

See answer to FAQ [‘Who is going to define softwares / software assurance level \(SWAL\) requirements for a particular ATM/ANS system? EASA, ANSP, ...?’](#).

Last updated:

04/04/2024

Link:

<https://www.easa.europa.eu/en/faq/139176>

If the software design assurance level (SW DAL) of equipment depends on ATM functions of the air navigation service provider (ANSP), how do you guarantee that certified/declared equipment will be available with such an expected level? Aren't we creating a chicken-and-egg issue?

Answer

This is similar to the case of safety objectives; the market will tend to provide products that are demanded by the ANSPs. A design or production organisation (DPO) will develop products per their anticipated selected software assurance level (SWAL). The ANSP will select the equipment that meet the required SWAL to meet their safety objectives of the functional system.

Non-compliance

The implementation of a change from the awarding of a public contract to the introduction into operation is a long-term process, during which the following situations may occur (we are considering the transition period): - Issuance of the specification for the given device during implementation - Failure to certify the supplier by the end of the transition period - Reluctance of the contracted supplier to certify. We consider it appropriate to agree with the procedure of the provider/regulator for these cases. Does EASA work on something as a guidelines in this matter?

Answer

The new regulatory framework consisting of 5 regulations has been published on 15 September

2023 and will be applicable as from beginning of October 2023. Any DS/AMC/GM will be associated to facilitate the implementation of the ATM/ANS ground equipment conformity assessment. If a regulated party is not in a position to apply any of the requirements, the *Flexibility* provisions under Article 71 of EASA BR could be applied for a certain period of time.

Last updated:

04/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139179>

For a system subject to SoC: If there is a documented non-compliance with some detailed specification, does that automatically mean, it must not be put into operation, or can it be put into operation based on some evaluation criteria? If yes, which are these criteria?

Answer

Considering that the detailed specifications are “soft law”, deviations to the detailed specifications (i.e., non-compliances) can be declared within the statement of compliance. Please refer to the associated AMC/GM Article 6 of the Delegated Act.

Partnership Agreements

What is the process to follow for an NSA to support EASA in its activity?

Answer

There will be need for coordination and information exchange between EASA and NSAs. If the question is about possible contribution of NSA into EASA assessments, then it is reminded that partnership agreements are possible. EASA intends to make use of that instrument, to get support from NSAs when needed.

Registry of certificates, statements of compliance, defects

Does EASA plan to publish an EU-open database recording: a. Certified DPO with the details of the certificates (validity, etc.), b. Certified GE with the details of the certificates, c. Issued SoC by ANSP or DPO, d. Known defects on certified and declared GE?

Answer

Some of the elements of the list will be included in EASA registry that is going to be created. For elements A and B, EASA needs to consider which info could be public. EASA does not anticipate the need for C at the moment. For d. the information will be made available to interested parties, for example, for occurrence reporting. This needs to be assessed internally, but at the moment EASA does not anticipate making this available for public information.

Scope/Applicability

We assume that only those systems are subject to Certification/Declaration/SoC, where applicable specific Detailed Specifications have been issued. Is this assumption correct?

Answer

In fact, systems that require attestation are defined in Articles 4, 5 and 6 of the Delegated Regulation (EU) 2023/1768. All these systems have to fulfil at least the general requirements contained in the detailed specifications. Additionally, systems will have to comply to specific detailed specifications in case they are available.

<https://www.easa.europa.eu/en/faq/139185>

We assume that Electronic Flight Strips are not subject to certification (EFS does not fall into 3b, as EFS does not provide separation of aircraft or prevention of collision, it is not 3a either, there it must be 3c). Please confirm.

Answer

EFS falls in the scope of the ATC equipment that supports ATCO's in providing separation.

Last updated:

03/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139186>

What parts of the system need to be certified/how can we define the equipment/constituent that needs to be certified. E.g. Flight strips System with several servers, operating system and virtualisation, switches, operating position equipment plus some software components. Can the DPO only certify the software, with definition of hardware requirements and the customer (or we) purchases any COTS HW, which fulfills these requirements?

Answer

It is a decision of the DPO to set the boundaries of the equipment that they wish to certify/declare.

COTS HW is not automatically excluded because it is COTS. However, if COTS HW is part of the supporting infrastructure, then it may fall out of the product boundaries.

Link:

<https://www.easa.europa.eu/en/faq/139188>

DoV refers to the systems structured according to support of the functions and services provided within the functional system defined by the respective ANSP, while SoC refers to components/equipment. DoV also covers the integration process within ANSP, while a SoC is at the level of today's DSU, DoC. Is this assumption correct?

Answer

Not exactly. E.g. point 3 of Annex VIII (Essential requirements) of EASA Basic Regulation also refers to "The systems and procedures shall include in particular those required to support the following functions and services (...)". Thus, the principle is the same. As regards the integration, it remains as today the ATM/ANS provider's responsibilities as only the ANSP has the global picture of the complete functional systems and how it will behave or continue to behave after the integration.

The DoV is also documenting the integration of components/devices into the provider's systems within its FS, the new regulatory framework does not

cover this integration - the SoC issuing process ends before the device is integrated into the FS, the integration is done as a change to FS. Is this assumption correct?

Answer

Yes, the integration should be assessed as part of the change to the functional system.

In Part 3, Subpart C, what about PSR and SMR?

Answer

They will be introduced in due course, at further updates, as EASA moves forward. Hopefully, before the transition period expires.

Could you please elaborate a bit more on the Statements of Compliance (SoCs) in case there are no detailed specifications DSs? If there are no DSs, then no SoC is required, right? Otherwise, any single and simple system would need a SoC?

Answer

Equipment that falls under Article 6 of Regulation (EU) 2023/1768 is subject to compliance with the DSs in DS-GE.SoC. The attestation of compliance must be made through an SoC.

DSs contain general requirements that must be complied with (Subpart A 'General' in DS-GE.SoC), even when there are no lower-level specific requirements in the DSs. Therefore, an SoC is required when the equipment falls under Article 6, even when there are no specific DSs.

Link:<https://www.easa.europa.eu/en/faq/139206>

From your explanations, we infer that if we need to put into service a system but there are no DSs, then we only need to comply with the GENERAL part of the DSs: Is this interpretation right?

Answer

That is correct.

Link:<https://www.easa.europa.eu/en/faq/139207>

If a detailed specification (DS) does not exist for certain hardware (HW) or software (SW), e.g. the application that provides to air traffic controllers (ATCO) the radar availability chart on the auxiliary display, is it subject to this regulatory package? I would say neither CERT, DECL nor SoC are applicable in this case? Only change management should be applied?

Answer

It is not the lack of lower-level specific requirements in a DS that determines if certain equipment is subject to CERT/DECL/SoC, but rather Articles 4, 5, and 6 of Regulation (EU) 2023/1768.

Articles 4, 5 and 6 address what is included at each category. Therefore, equipment supporting air traffic control (ATC) service provision will be subject to compliance with the DSs.

It is important to note that DSs always contain general requirements that must be complied with, even when there are no lower-level specific requirements in the DS.

Where is compliance with the essential requirements documented in the first place?**Answer**

Compliance with the essential requirements is demonstrated when the equipment demonstrates compliance with the detailed specifications (DSs) applicable to the equipment category. There is no requirement on where compliance with the essential requirements is explicitly recorded.

What parts/functions/constituents of a remote tower system will be subject to conformity assessment?**Answer**

[Regulation \(EU\) 2023/1768](#) defines the categories of equipment that are subject to the conformity assessment process. Please see Article 4 (for equipment subject to certification), Article 5 (for equipment subject to a declaration) and Article 6 (for equipment subject to a statement of compliance). The regulation applies equally to equipment used within a remote tower system or a conventional tower system.

<https://www.easa.europa.eu/en/faq/139826>

Does the conformity assessment framework for ATM/ANS ground equipment, including Commission Implementing Regulation (EU) 2023/1771, apply to flight procedure design (FPD) providers?

Answer

ATM/ANS equipment used in support of FPD services is out of the scope of [Regulation \(EU\) 2023/1768](#). Articles 4, 5, and 6 of that Regulation determine what ATM/ANS equipment is subject to conformity assessment. Equipment supporting FPD, data services (DAT) and other network functions (other than air traffic flow management (ATFM)) is not listed, and thus **FPD is not within the scope of Regulation (EU) 2023/1768**.

However, FPD organisations **are** within the scope of [Regulation \(EU\) 2017/373](#). This includes the latest amendment to Regulation (EU) 2017/373, i.e. [Regulation \(EU\) 2032/1771](#). This amendment applies to FPD in its entirety. Indeed, GM1 ATM/ANS.OR.A.045(g)(4) to Regulation (EU) 2017/373 is intended to explain this aspect. In short, point ATM/ANS.OR.A.045(g) applies to FPD, in particular its point 4, because this equipment does not fall within points 1, 2, or 3.

In summary, for equipment used in the provision of FPD services, the Conformity Assessment Regulation (i.e. Regulation (EU) 2023/1768) **does not apply**. However, Regulation (EU) 2017/373, as amended by Regulation (EU) 2032/1771, **does apply**.

Does a military surveillance station fall under the equipment of Regulation (EU) 2023/1768 if an air navigation service provider (ANSP) chooses to make use of the surveillance data for Air Traffic Management / Air Navigation Services (ATM/ANS) provision?

Answer

No. However, military services or equipment used for civilian purposes by an ANSP are not fully excluded from the scope of the Regulation.

Article 2 of the Basic Regulation ([Regulation \(EU\) 2018/1139](#)) excludes from its scope ATM/ANS systems and constituents provided or made available by the military. However, in accordance with Article 2(5)(b) of the Basic Regulation, Member States shall ensure that those military ATM/ANS or equipment offer a level of safety and interoperability with civil systems that is as effective as that resulting from the application of the essential requirements that are laid out in the Basic Regulation.

In other words, the military service or equipment provider is not bound by the implementing rules (i.e. Regulations (EU) [2023/1768](#) and [2023/1769](#)) and is not required to apply the requirements defined in Regulation (EU) 2023/1768. However, Member States are required to demonstrate that military ATM/ANS or equipment provides a level of safety and interoperability that is as effective as civil systems that are developed on the basis of Regulation (EU) 2023/1768. This is in addition to assessments performed by the ATM/ANS provider and any Service Level Agreement (SLA).

For example, this could be achieved by applying (and demonstrating compliance to) the requirements of Regulation (EU) 2023/1768. It could also be achieved by demonstrating that the standards and requirements used to develop the military ATM/ANS or equipment (e.g. military standards) are equivalent to the standards and requirements defined in Regulation (EU) 2023/1768. This demonstration that the equipment provides a level of safety and interoperability as effective as civil systems is to be made available, upon request, to any civil ANSP intending to make use of the military equipment in the provision of their services.

Finally, there is an obligation to EASA, when monitoring Member States' compliance with the Basic Regulation through the standardisation processes, to verify that the process/criteria used by Member States (to determine that military services or equipment are "as effective as" the systems and equipment produced under Regulation (EU) 2023/1768) are coherent and aligned, and achieve that objective.

Please see below for the relevant regulatory references.

Recital 9 of the Basic Regulation states:

"(9) Aerodromes that are controlled and operated by the military, as well as air traffic management and air navigation services ('ATM/ANS') that are provided or made available by the military, should be excluded from the scope of this Regulation. However, Member States should ensure, in accordance with their national law, that such aerodromes, when opened to the public, and such ATM/ANS when serving air traffic to which Regulation (EC) No 549/2004 of the European Parliament and of the Council (1) applies, offer a level of safety and interoperability with civil systems that is as effective as that resulting from the application of the essential requirements for aerodromes and ATM/ANS set out in this Regulation."

Article 2(3) 3 states:

"3. This Regulation shall not apply to ... (c) ATM/ANS, including systems and constituents, personnel and organisations, that are provided or made available by the military;"

Article 2(5) states:

"5. Without prejudice to national security and defence requirements, and Article 7(5) of Regulation (EC) No 550/2004 of the European Parliament and of the Council (1), Member

States shall ensure that:

(a) the facilities referred to in point (b) of the first subparagraph of paragraph 3 of this Article that are open to public use; and

(b) the ATM/ANS referred to in point (c) of the first subparagraph of paragraph 3 of this Article that are provided to air traffic to which Regulation (EC) No 549/2004 applies,

offer a level of safety and interoperability with civil systems that is as effective as that resulting from the application of the essential requirements set out in Annexes VII and VIII to this Regulation.”

Means of compliance (MOC)

Should the ATM/ANS Equipment Release Form attach external documentation/evidence how the GE is compliant with the AMCs and DSs?

Answer

The release form is a declaration that what the manufacturer produced is in compliance with the applicable detailed specifications. There is no requirement or need for additional evidences.

Conformity assessment during the transition period

We assume that all systems in operation before September 13 are grandfathered and only need SoC after major changes. Please confirm.

Answer

According to the transitional provisions, systems in operation before 5 October (entry into force

date) holding EC declarations in accordance with Regulation (EU) No 552/2004 are deemed to have been issued with certificate, declaration, or statement of compliance.

In case of major change, there is a need to reissue the SoC.

What happens with the equipment sold by a DPO during the transition period and installed by the ANSP but at the end of the transition period, the DPO is not certified by EASA?

Answer

During provisional period, it is possible to issue a statement of compliance (SoC). It becomes legacy equipment at the start of 2028. Therefore, legacy ATM/ANS GE issued with a SoC during this transition period (2023-2028) will be subject to evaluation by EASA and subject to certification/declaration. After 2028, this path will be closed.

Last updated:

04/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139197>

In the following scenario, an ANSP put into service a GE (i.e. ADS-B) with its SoC, in September 2028 the manufacturer is not approved as DPO. Should the ANSP deinstall it and deploy a GE from another DPO?

Answer

Between 2023 and 2028, attestation of equipment is achieved through a SoC. After 2028, there will be an EASA evaluation. If those equipment are installed, they will remain in operation. But if they need to be updated/modified, there will be a need to conduct certification/declaration.

Last updated:

04/01/2024

Link:

<https://www.easa.europa.eu/en/faq/139198>

Does it mean that if during the transition period there is only one DPO but many manufactures, ANSPs are not forced to procure the equipment from that DPO? They can thus procure an equipment from non-DPO manufacturers till September 2028?

Answer

EASA confirms that during transition period, the main means for attestation will be the Statement of Compliance (SoC) by the ANSP.

To have a certificate of equipment, we need to have an approved DPO. However, during the transitional period, there may not be many approved DPOs. Therefore, the main means would be the SOC.

During the transition period (2023-2027) there will be a mixture of DPOs and equipment that is certified, and Statements of Compliance (SoC). If there is a certificate of conformity, then there is no need for the ATM/ANS provider to issue a SoC.

<https://www.easa.europa.eu/en/faq/139199>

For SoC and DoV, we assume that the issuance of existing DoVs will be simply replaced by the issuance of SoCs (at least within the transitional period until 2028, once the DoV or its part are to be change). Is this correct?

Answer

During the transition period (13 September 2028):

- ATM/ANS equipment subject to certification and ATM/ANS equipment subject to declaration of design compliance shall be deemed to have been issued with a certificate or declaration respectively in accordance with Article 4 or Article 5 on a provision basis, i.e. unless the Agency determine based on an assessment that such ATM/ANS equipment does not ensure a level of safety, security, performance and interoperability equivalent to that required by

Regulation (EU) 2018/1139 and the new delegated act.

- ATM/ANS equipment which is subject to a statement of compliance, the EC declarations of verification (DoV) of systems that have been issued shall continue to be valid for an unlimited duration and shall be deemed to have a statement of compliance pursuant to Article 6 of the new delegated act.

Implementation support to stakeholders

What is the EASA plan to ensure wide communication towards ATM GE providers and common understanding of the regulation framework?

Answer

EPAS 2023-2025 contains 3 new tasks, 2 for the regulatory activities (covering the detailed specifications, AMC and GM material), and also 1 task requiring implementation support to Stakeholders (National Supervisory Authorities). EASA is also thinking about additional ways that materials can be provided to any stakeholder to facilitate common understanding (e.g. Specific trainings and presentations, FAQs, etc).
