European Union Aviation Safety Agency

FAQ n.139167

FAQs:

Categorisation of systems or equipment, Air Traffic Management / Air Navigation Services (ATM/ANS) ground equipment, Regulations

Question:

We are still not sure, in which category some specific equipment falls and thus we would appreciate a more detailed allocation oversight of specific systems to categories (e.g. electr. flight strips; network equipment, Server HW, virtualisation and operating systems, used for all kinds of systems).

Answer:

First step is to assess the scope of the equipment and which function it supports. This assessment will determine the category to which it belongs.
