Information Session on NPA2025-06: proposed update of AMC/GM associated with the conformity assessment of ATM equipment

Description

EASA is pleased to invite interested stakeholders to an information session on the material proposed in the recent published NPA2025-06, as a result of RMT0743 subtask 1 (‘Regular update of the AMC and GM associated with the conformity assessment framework for ATM/ANS equipment’). This session aims is to provide an overview of the proposed AMC/GM.

The proposed regulatory material is based on EASA’s experience gained during the initial implementation of the related regulatory framework when issuing design or production organisation approvals, during the development of procedures for the certification of ATM/ANS equipment, and feedback received from stakeholders since the adoption of the regulatory framework.

The information session will facilitate understanding of the proposed material and subsequent consultation, which is open until 23/01/2026.
The event will take place on 25th November 2025, and will be organised in hybrid format: it will be possible to follow it online via Webex (**link provided in the Agenda**) or in-person at EASA Headquarters in Cologne, Germany, for a reduced number of participants. Attendance is free of charge, and attendance in-person requires registration due to limiting seating.
