European Union Aviation Safety Agency

FAQ n.143006

FAQs:

Higher Airspace Operations (HAO)

Question:

Who is involved in the HAO project?

Answer:

The HAO project is led by EASA and is carried out in close cooperation with the EU Commission, EU Member States, the EDA, EUROCONTROL and others. Seven scientific studies on relevant topics of different complexity are being outsourced to external stakeholders. The project also involves targeted consultations with industry, research organisations, academia, and other stakeholders to ensure that a broad range of operational, technical, and regulatory perspectives is considered. Where appropriate, coordination with international partners and standard-setting bodies is pursued to promote consistency and interoperability beyond Europe.
