

SAF Train-the-Trainer Workshop

19 - 20 August 2026; Libreville, Gabon

Organised by: EASA

Event

Type: Workshop

Date:

19 Aug 2026 to 20 Aug 2026

Location

Libreville, Gabon

Description

SAF Train-the-Trainer Workshop brings together environmental experts from African Civil Aviation Authorities to strengthen knowledge on Sustainable Aviation Fuels (SAF) and support the implementation of Africa's Continental SAF Action Plan.

Organised by AFCAC, EASA and the CAA of Gabon under the OPER SAATM Project, the workshop aims to develop a network of national experts who will be able to share this knowledge within their own organisations and contribute to future SAF initiatives across Africa.

About the workshop

Over two days, participants will explore the full SAF value chain—from feedstock and production to financing, policy development and deployment. The programme combines technical presentations, industry experience and practical group exercises based on real-life scenarios.

The workshop follows a **"learning by doing"** approach. Throughout the programme, participants work together on a country case that evolves from one session to the next, allowing them to apply new concepts while exchanging experiences with colleagues from across the continent.

Key topics

- SAF fundamentals and the CORSIA framework
- Feedstock sustainability and certification
- SAF production pathways
- Business models and project financing
- Policy development and national roadmaps
- Practical case studies and peer learning throughout the workshop.

Workshop documents

After the workshop, the participants will be able to download all workshop materials below.

Registration

On invitation only.
