

CYBER Final dissemination event — Aviation resilience — Cybersecurity threat landscape

Hybrid event

Organised by: EASA

Date:

12 Oct 2026

12/10/2026, 10:00 - 13:00 CET (UTC +2)

Description

****30/09/2026 Latest update: Agenda**

The aviation industry is increasingly reliant on sophisticated information technology (IT) systems to support its operations. This growing reliance on IT has also made the industry a more attractive target for cyberattacks. In recent years, there have been a number of high-profile cyberattacks on aviation systems, including attacks on airlines, airports, and air traffic control systems. These attacks have raised concerns about the potential for cyberattacks to disrupt aviation operations and cause significant safety risks.
