Description

Date & time

11/02/2019, 09:30 - 17:30

Description

The 1st Electrical & Hybrid Aviation Workshop is set up as a forum to engage and network with European manufacturers of innovative electric & hybrid aircraft, engine and component manufacturers, national aviation authorities, research institutes as well as representatives from

cities.

The forum will give participants the opportunity to discuss with EASA Experts and PCMs from FS- and CT-Directorate various important topics with respect to the aspects of Flight Standards and Airworthiness.

As the present set of technical requirements and operational regulations do not fully cover for the newly proposed innovative technologies there obviously is a strong need for the entire community to agree a common understanding and to come up with proposals for new or revised standards and rules.
