

FAQs:

[Implementation and Integration](#) , [Automatic Dependent Surveillance — Light \(ADS-L\)](#)

Question:

Are there any cost advantages to ADS-L compared to installing a full ADS-B solution?

Answer:

ADS-L and ADS-B do not fulfil the same uses and have different intended uses. The use of low-power, low-cost, non-certified devices and the potential for software or firmware updates to existing systems make ADS-L an attractive solution for general aviation and other aircraft, possibly alongside other existing protocols or certified surveillance solutions.
