<b>Title:</b>	AHM Application Harmonization in MSG-3 Volume 1
<b>Submitter:</b>	MPIG AHM Working Group

Applies To:	
MSG-3 Vol 1	X
MSG-3 Vol 2	
IMPS	

**Issue:**

The objective of the MSG-3 document is to present a means to develop scheduled maintenance tasks and intervals. IAHM is an end-to-end process that includes activities that are downstream of the MRBR. The use of the terms “tasks and intervals” are not appropriate when referring to the downstream activities associated with IAHM.

**Problem:**

When AHM was introduced in the Level 3 analysis, the industry could not agree on the appropriate terminology to use when referring to AHM alternatives to classic tasks. This CIP proposes the wording in the MSG-3 Level 1 document be revised to “IAHM application.”

**Recommendation (including Implementation):**

To support harmonization and avoid conflicting terminology, this CIP proposes that the following paragraph be added and used in the MSG-3 document going forward.

The following change to the MSG-3 Volume 1 document is proposed.

**3. Chapter 2-3-9. IAHM Candidate Analysis (Third level)**

**1. General**

This section allows for the analysis of candidates proposed for the application of IAHM and provides a method for determining the dedicated IAHM applications that can be used as full or partial alternative to classic tasks.

The IAHM Candidate category consists of the Failure Causes for which IAHM capability exists and for which a Classic task was selected following the Level 2 analysis (see definition). All IAHM candidates are processed through the logic diagram of Level 3 analysis. There are three steps associated with the logic diagram. Each step begins with an opening question intended to assess the applicability to the IAHM candidate.
