

FAQs:

[Drones with class identification label C0-C6](#), [Drones \(UAS\)](#), [Regulations](#)

Question:

Are drones with class identification label required to operate in the specific category?

Answer:

An operator conducting an operation in the specific category must demonstrate that the drone used is compliant with the technical requirements defined in the operational authorisation issued by the competent authority. The technical requirements depend on the level of risk of the operation. For operations with lower risk (e.g SAIL I and II according to SORA) the competent authority may accept a drone with class identification label.
