FAQ n.139173

FAQs:

Cloud-based architectures, Air Traffic Management / Air Navigation Services (ATM/ANS) ground equipment, Regulations

Question:

How the case of an ANSP cloud based architecture and a SW application produced by a DP0 which is subject to certification or declaration will be handled ?

Answer:

The ANSP has to demonstrate to meet the functional requirements and the interface requirements. If the system is cloud based, then it is possible that the information security aspects may require specific scrutiny. However, the requirements are not dictating any specific architecture or HW/SW.
