This OJT is particularly relevant to the implementation of EU regulation for aerodromes (No 139/2014) that has been transposed in 2019 in Albania.

To increase its staff competence and exchange on best practices the Albanian CAA has requested on the job training on oversight of aerodrome operations with specific focus on practical oversight of rescue and firefighting services (RFSS), apron safety management, wildlife management and construction works.

Throughout the activity the focus was on preparation and implementation of the aerodrome oversight/inspection (review of aerodrome documentation, announcement of oversight to aerodrome operator, applicable checklists, etc.), use of inspection tools and equipment, operational verification during oversight, methods and evidences, content of the final report, inspection follow up process and findings management.

The activity was implemented from 28 June to 01 July 2021.

In total 4 participants from Albanian National Aviation Authority attended the training.
