There are many Registered Facilities in the UK, of which my company is one who for many years have safely and efficiently been offering training for the PPL.

I have been a pilot for 50 years, an instructor for 28 years and an examiner for 9 years. For the last 25 years I have run a very small Registered Facility with a maximum of two instructors and having gone through your proposed amendment (NPA No 200822c) several times and I find it the most over regulating & draconian proposal of legislation that I have ever read.

The people running Registered Facilities in the UK are already complying with most of the proposed regulations (OR.GEN 210 a – e, OR GEN 215 a & b OR GEN 220 a b c OR.ATO 120 a 1 2 3) without having the enormous burden of extra costs that this proposal will bring, and possible closure of businesses.

We are already complying with local councils and aerodrome management on fire risks, exits, extinguishers etc and you wish to overburden us with a Safety Management System. (OR GEN 200 a & b).

Facilities are already available for own comfort and well being while working, we do not need to be told to share these with the students.

If the student does not think that we are up to the task they will vote with their feet and money and go elsewhere.

It gives me the opinion that the common sense is no longer allowed to prevail and that you think that we, as professionals are not capable of thinking for ourselves.

This is a backward step, many small businesses in an industry already struggling to cope with the rising price of aviation fuel, insurance, rents etc will not be able to afford the costs for these proposed changes.

Please think again.

Mrs Jose McVicar

comment by: *DGAC FRANCE*

The general structure proposed in not conform to the definition given in NPA22A. The section GEN is applicable to all domains. It is therefore necessary to avoid requirements in part GEN concerning a specific domain (ATO or OPS as shown into brackets).

These requirements shall therefore be removed to specific part

it should be useful to include in the appropriate subpart to these domains a

requirement for which the AMC could be linked.

This contradiction between generic OR and specific AMC to these generic OR confirms that the structure proposed in NPA 22 is not adequate. In addition, we note that only 4 pages are actually generic. Some provisions of that generic requirements are repeated in the specific part - for that reason, the added value of the OR GEN is not evident. The repetition of these 4 pages in the different domains is a preferred option.

Modification :

**AMC OR.GEN.030 Changes to the organisation's approval**

**AMC OR.GEN.035. Continued validity OPS**

To include in AMC to Subpart OPS.

**~~AMC2.OR.GEN.200.(a).(7) – Management System - ATO~~**

~~2. ATO should monitor compliance with the training and operations manuals they have designated to ensure safe and efficient training. In doing so, they should as a minimum, and where appropriate, additionally monitor:~~

~~**AMC3.OR.GEN.200.(a).(7)**~~

~~**AMC4.OR.GEN.200.(a).(7)**~~

Respectively to replace by

**AMC2.OR.ATO.XXX**

**AMC3.OR.OPS.XXX**

**AMC4.OR.OPS.XXX**

**1) Add in Subpart OPS : « AMC OR.GEN.030 Changes to the organisation's approval » and AMC OR.GEN.035. Continued validity OPS.**

**2) Add in subpart ATO**

**OR.ATO.XXX – Compliance Monitoring Programme**

ATO shall monitor compliance with the training and operations manuals they have designated to ensure safe and efficient training. In doing so, they shall establish a compliance monitoring programme

**AMCX.OR.ATO.XXX – Compliance Monitoring Programme**

The compliance monitoring programme should, as a minimum, cover: [...] content of AMC2.OR.GEN.200(a).(7)-ATO – 2. a to d .

**OR.OPS.XXX – Compliance Monitoring Programme**

OPS shall monitor compliance with operational procedures they have designed to ensure safe operations, airworthy aircraft and the serviceability of both operational and safety equipment. In doing so, they shall establish a compliance monitoring programme.

**AMCX.OR.OPS.XXX – Compliance Monitoring Programme**

The compliance monitoring programme should, as a minimum, cover: [...] : content of AMC3.OR.GEN.200(a).(7)-OPS – 2. a to p .

**General comment**

In France, flight tests are considered as distinct operations. According to EASA, flight testing must comply with basic regulation, which is common with all the air operations. Consequently, qualifications and approvals for flight testing are to be considered as additional requirements.

Therefore, we propose to create an additional organisation (AFTTO, Approved Flight Test Training Organisation) specialized in flight test training.

Remarks:

1. This proposal takes shape by creating a new subpart which describes AFTTO requirements.
2. AMCs and GMs to PART-OR subpart AFTTO has to be defined.

comment 207

comment by: *William JD TOLLETT*

I think it is unnecessary to have all flight training organisations subject to the requirements for Approved Training Organisations (ATOs).

In the UK for many years it has simply been necessary for training organisations at the PPL level to register with the national aviation authority. A requirement for approval would add extra expense and delay to the business-like operation of PPL flight training without enhancing safety or business efficiency.

comment by: *Egon Schmaus*

General information:

Commenter is the deputy head of training of the Baden-Württembergischer Luftfahrtverband . Thus, he is a leisure-time head of training of about 850 flight instructors, all active in their leisure time.

The (BWLTV) is the association of the about 200 aviation clubs in the state Baden Württemberg in the south west of Germany. About 160 of these clubs instruct on aeroplanes, sailplanes, micro lights, balloons and parachutes.

The quite high number of clubs which are partially quite small are spread widely across the country and therefore most people interested in flying can find a club close by giving access to flying at very low cost. This is especially important so that also young people still at school interested in aviation have the possibility to start flying. This offering is only possible because all functions are executed by volunteers.

A big portion of general aviation activity is happening in the context of these clubs. Here pilots are under close observation and exchange lots of information. Aircraft belong to all members and are often not insured against loss. This leads to a quite rigid control between the members. This infrastructure therefore contributes a lot to the safety in aviation.

It is important to maintain this infrastructure and make sure it is supported by the regulations. This importance is also emphasized in the „*An Agenda for Sustainable Future in General and Business Aviation COM(2007) 869*“.

comment by: *KLM Engineering & Maintenance*

NPA 2008-22C.

Please find attached the KLM Engineering & Maintenance comments on NPA 2008-22C. It is complementary to the KLM Operator comment which will also be inputted in the CRT Tool. We decided to draft separate Engineering & Maintenance comments since maintenance organizations are not adressed in this NPA but will be impacted by the new regulations. So there is no formal

basis for reactions from a maintenance organisation perspective but we do have questions which we expressed in our comment.

General:

Although KLM E&M can, generally speaking, understand the intent of NPA 2008-22C and the rationale behind the move towards a consolidated regulation structure, we believe the NPA is deficient because it does not at the same cover any maintenance related activities, both within and outside EU 27+4.

Maintenance related activities will almost certainly be impacted by the new regulation structure, but since rulemaking texts in this field are presently lacking we believe it unfair that there is nothing tangible to base our comments upon. We believe it would have been more appropriate to obtain agreement on a complete new regulation structure and subsequently to embed all aviation activities into this structure, all at the same time.

Since we have no insight into the consequences for Part 145, 147, 21, 66 and M, we currently cannot agree to the new regulation structure and the concept of certification as presented under NPA 2008-22.

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard", we feel there is a need to create one.
- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR, or if such a function does not exist, would it rest with the accountable manager for the complete organisation?
- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here? Should this not be part of Compliance Monitoring? We need a proper definition.
- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or, if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.
- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?
- "Compliance monitoring" as opposed to Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Assurance.

comment by: *Fridrich Jan*

I think that proposed changes in the present NPA were not what the light aviation community asked for. We asked for a stand-alone European or even Global LSA category (covering all basic four areas of aviation activity - Initial airworthiness, Maintenance, Licensing and Operations), compatible with LSA category in the United States. That is why it is politically necessary to establish a balanced set of simple regulations, which will be acceptable to their users in different Member states, without detrimental effects on flight safety.

At the same time the Annex II must be protected until this new proposed system will prove that it can be as successful as the Annex II system.

On the other hand, no bureaucratic regulation should be introduced for the sake of harmonisation/standardisation without a serious justification through a proper RIA process.

Unfortunately RIA process presented in this NPA 2008-22a cannot be considered as proper from the point of view of Sport and Recreational Aviation. This is mainly because no relevant data from our sector of aviation were used.

**Proposal:**

I did provide comments in this NPA because I hope that this will allow EASA to understand that the proposals in this NPA 2008-22 are not suitable for the Sports and Recreational Aviation.

I think that in this present form NPA 2008-22 is disproportional and not fit in sports and recreational aviation training environment and it should be discharged for Sports and Recreational Aviation.

There is a serious risk that the successful light aviation (represented by the modern microlights) will be killed by the present proposals.

I would welcome to work with EASA to develop a revised approach to this rulemaking task that will take into consideration the needs of the Sports and Recreational Aviation community.

Therefore I will not place further comments, because it does not make sense, the whole document must be reworked for Sport and Recreational community!

comment by: *ALSIM Simulateurs*

Implementation of a Mutual acceptance process and/or a Type Qualification for lower level devices including FNPTs

We believe, for the sake of common sense and to ensure simplification, that a type of a simulator, having already been qualified by one Authority, should give rise to implicit qualification for subsequent units, specially for lower level of devices.

Then, We strongly suggest that a mutual acceptance and/or a Type Qualification be implemented for FNPTs, such as already exists for aircraft. In effect, when a simulator has already undergone one JAA-EASA qualification, its qualification procedure in another JAA-EASA counterpart should only involve a compliance check between the FNPT serial number and the Type Certification document. This provision exists in United States, without any adverse effect on the quality of training, for the Advanced Aviation Training Device (AATD=equivalent to FNPT in Europe) where qualifications are carried out by the "General Aviation & Commercial Division" under AC n°61-136 regulation. It is clearly stated that "the approval will be valid for all serial numbers that are

*part of that configuration, provided there is no change in that configuration or in a value for a criterion in paragraph 8" [AC 61-136 issued the 14th of July 2008, Appendix 2, paragraph 3].*

While the EASA has the willing to harmonise the regulation, some National Aviation Authorities keep on claiming that they are required under local and European rules for FSTD qualification. They clearly want to take advantage of the lack of provision for approval of a type or for mutual acceptance in European regulatory process to reinforce their position. This is not acceptable for both operators and the industry world.

**Then the provision in AMC to AR.ATO.210 for BITDs stating that " the qualification should be valid for all serial numbers of this model without further technical evaluation" should be extended to FNPT devices.**

comment 758

comment by: ALSIM Simulateurs

Distinction between FSTD qualification and ATO qualification

The FSTD qualification should be issued independently of any management system approval. A double qualification should be given, one for the FSTD and another for the management system. This would avoid some confusion when it is not clear if revoking an FSTD qualification is due to FSTD non compliance or ATO non compliance. This confusing would not exist at any time if an FSTD Type Certification was possible (see remark about : "Implementation of a Mutual acceptance process and/or a Type Qualification for lower level devices including FNPTs").

comment 759

comment by: ALSIM Simulateurs

Distinction between higher level simulators and lower level devices

A distinction between higher level simulators and lower level devices (FNPT & BITD) should be made in terms of requirements. In United States, the distinction is clearly made using two different regulations: the Full Flight Simulator qualifications are carried out by the "National Simulator Program Staff" under Part. 60 regulation whereas the Advanced Aviation Training Device (equivalent to FNPT) qualifications are carried out by the "General Aviation & Commercial Division" under AC n°61-136 regulation.

Regarding the AATDs, the regulation is far less restrictive and far more pragmatic in terms of requirements. In the same way, we suggest that a distinctive approach be made in Europe between FFSs and FNPTs. This distinction may be similar to the one made between the commercial and general aviation regarding the aircraft maintenance (refer to the discussion process with the EASA MD032 working group).

comment 760

comment by: ALSIM Simulateurs

Relaxing of Validation data and Validation Tests substantiation for FNPT & BITD

The Validation Data and Validation Tests substantiation should be in a more relax form compared to what is required for bigger simulators.

**Validation Data:** An acceptable mean to substantiate the objective tests would be to subjectively check the FNPT device with a qualified pilot, and determine whether or not the FNPT device is relevant of the aircraft or class of aircraft simulated. Hence subjective assessment from both the operator and

the manufacturer could be accepted as Validation Data, as it is under FAA regulation for AATDs (see paragraph 1-2).

**Validation Test:** The current regulation requires for FNPTs no more than 45 objective tests. It is huge compared to the FAA regulation for AATDs [AC 61-136 issued the 14th of July 2008], where no objective test at all is required for qualification process. We think that a compromise could be found between 0 and 45. For example, there are only 19 objective validation tests required for FNPTs under Canada regulation.

comment by: *ALSIM Simulateurs*

#### Pragmatic approach

A strict application of the pragmatic approach of what a qualification process is (as specified in the current regulation) is urgently required: "*The Civil Aviation Authorities of certain European countries have agreed (...) aviation requirements (...) with a view to **minimizing Type Certification** problems or joint ventures, **to facilitate the export and import of aviation products** (...) in one European country to be accepted by the Civil Aviation Authority in another European country (...)*" [First paragraph of the foreword of the JAR-FSTD(A)].

The use of the phrase "*Unacceptable*" for serious defect, which holds up qualification and prevents operators from using their operational equipment, must be regarded as a serious issue and therefore used in a restrained and extremely well-targeted manner.

comment

762

comment by: *ALSIM Simulateurs*

#### Creation of a supervisory Authority with appeal procedure

In cases where an Operator or a Manufacturer does not completely agree with some remarks, are the Manufacturer and/or the Operator allowed to put forward their point of view? If the answer is no, this would imply that they have no room for manoeuvre. Is this truly within the spirit of the regulations? Finally, in the event of any disagreement, which is the legitimate Authority capable of taking decisions in an objective manner?

If an identified serious defect is subject to be challenged, an appeal process should be possible with independent competent expert or third EASA member state Authority before downgrading or revoking the qualification level. In the interim, an FSTD temporary certificate shall be released unless a duly legitimate serious defect induces a clearly identified negative training.

We therefore request that a supervisory Authority be able to carry out the role of coordinator and moderator, in order to harmonise the rules and to defend the interests of Operators and Manufacturers objectively in the event of a disagreement with a NAA. We would like this role be provided during the interim phase between the dissolution of the JAAs and the actual publication of the new Part FSTD by the EASA in 2010.

comment

763

comment by: *ALSIM Simulateurs*

#### Reformatting of the EASA part FSTD

The reformatting from JAR-FSTD(A) to EASA regulation has resulted in a too much voluminous document. It is quite difficult to link the parts AR and OR with the part CS-FSTD.

comment 765 comment by: *Norwegian Air Sports Federation*

In our opinion the wording used in this NPA does NOT express the exact intensions of EASA. In such cases is difficult for us to guess what the EASA intension is. If the wording of any item is changed to clarify the EASA intension, we might want to make new comments on the new wording at a later stage

comment 790 comment by: *AEA*

There should be a choice for (currently) separately approved organizations (such as TRTO, AeMC etc) to be part of the general organization approval or not. For clarity, this should be explicitly stated.

Generally, the NPA tries to address both the "single-privilege" organisation (e.g. Operator only) and the multi-privilege organization (e.g. Operator, ATO, AeMC) at the same time, which leads to many inconsistencies in the rules due to the numerous possible organization setups.

comment 791 comment by: *AEA*

It is quite difficult to make comments on this part without having read the whole NPAs related to Ops & FCL.

NPA 2009-02 adds AMCs to these subparts which shows that all NPAs are linked together and a non exhaustive reading may lead to inefficient comments.

All comment periods should be aligned and sufficient time should be left in order to :

- Familiarize with this totally new structure
- Read every part in detail and find all the links between the different subparts
- Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating
- Ask questions to EASA as many parts raise questions
- Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.

More time and a cooperative way of working are needed to produce a good regulation.

comment 792

comment by: AEA

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard" , we feel there is a need to create one.
- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?
- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here? Should this not be part of Compliance Monitoring? We need a proper definition.
- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.
- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?
- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance

- SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope. Compliance clearly is only a subdivision / one

element of Quality.

QM may "not become a Postholder" as this would limit his freedom to think outside of the box.

**Management system**

General :

The scope of the « management system » is hard to be understood. We understand that the purpose of this part is the « management of safety » ; it should be rewarded

For exemple :

OR.OPS 015. AOC

The « management system » mentioned in this § reflects the organisational structure of the operator and seems different from the «management system » of § OR.GEN.200 which is focusing on safety only.

comment by: *Frank Schweppe*

General comment concerning ballooning:

In 2008 the European Commission has passed a law declaring that non-motorized flight operations such as ballooning and gliding are no longer considered to be Commercial Air Transport, and competent authorities in member states have since been forbidden to supply new AOCs to operators of non-motorized aircraft such as balloons.

Thus, balloons are no longer involved in Commercial Air Transport. Period. Done. It has been decided and voted by the EC. Since autumn 2008 this is European LAW. (document: 2006/0130 (COD) , adapted text for D 2407/92 art. 1, part 2).

Most of the contents of this NPA clearly concerns training requirements for personnel involved in commercial air transport. Balloons no longer are part of this category, thus ballooning operations should not be included in this NPA at all, or in may of the articles clear exeptions should be made to allow for this

non-CAT status. For instance, balloon pilots do not carry ICAO-standardized professional licences (and the proposed EASA Balloon Pilot's Licence with limited commercial privileges and Class 2 medical to allow the carrying of passengers for hire is not a full professional licence or CPL), so one can not demand chief instructors or heads of instruction of any 'balloon school' to carry or have carried professional licences for any period of time. This would mean that one must be a professional FIXED WING pilot to be able to give instruction on balloons. Clearly that can not be the intent of this NPA.

**Relevant text:** General Comment

**Comment:** In case of commercial air transport, the manual requirements are rather confusing and do not provide legal certainty. We do not see any safety justification for EASA's proposal which is a fundamental departure from EU-OPS.

**Proposal:** realign with EU-OPS, focussing on an OM with 4 parts

comment 1145

comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

Attachment [#2](#)

On one hand, FNAM fully recognizes the value added and quality of work delivered by EASA within the certification range (Article 5 of Basic Regulation 216/2008). FNAM will continue supporting the efforts of the Agency in this field.

On the other hand, operational aspects are rather a different issue, though contributing to the same aim of safety enforcement. For years, thousands of flights are daily operated demonstrating the efficiency of the current regulations (JAR-OPS, OPS-1/3 and EU-OPS) applicable for flight safety.

To that extend, FNAM highlights the issue raised by the Commission within COMMISSION OPINION on the final recommendations issued by the Management Board of the European Aviation Safety Agency following the external evaluation on the implementation of Regulation 216/2008, dated 05MAY09 (C2009-3220 final)

" Having this in mind, the Commission is concerned by the potential consequences of the provisions of the "Notice of proposed amendments" on air operations (OPS) recently published by the Agency. The Commission believes that it is of a paramount importance to guarantee that the implementing rules to be adopted in this field reproduce the existing relevant legislation (EU-OPS Regulation 3922/91[1]). This will ensure continuity and coherence with such legislation and therefore more certainty for the industry. It will also allow the Agency to immediately start carrying out the related standardisation inspections. All efforts should be deployed to avoid any delay in the adoption of the implementing rules."

FNAM performed a wide analysis of NPAs that EASA already published according to Basic Regulation 216/2008. First sights demonstrate that there are many major changes, new concepts and questions that are worth additional work and consultation:

- Proposed regulation is widely different from EU-OPS. Its content is not a simple transfer of EU-OPS while Basic Regulation 216/2008 states that "with regards to commercial transportation by aeroplane, [measures shall be] developed initially on the basis of the common technical requirements and administrative procedure specified in Annex III to Reg EEC 3922/91"(Article 8 §6.);
- The structure forbids any comparison or cross-analysis with the currently applicable regulation;
- The legal structure of NPAs (GM/AMC/CS) seems confusing especially regarding implementation processes and legal certainty. Some key safety elements have still not been published or downgraded to soft-law which may be counter-productive.

To that extend, FNAM asked for "globally extending delays related to these NPAs until end of summer 2010, to successfully face this great change, jointly with EASA." This request was formally applied to M. Kneepkens through a letter dated 28APR2009, referenced 13198 (enclosed). At the time this comment his made, FNAM has not received any answer from EASA. Consequently, FNAM renews this official request through the CRT process and awaits a circumstanced answered from EASA, as some other third-parties are known to have express similar requests.

For all these reasons, FNAM considers that it is not possible to comment the proposed regulation in its current state.

Nevertheless, FNAM has proposed to EASA to "to settle a common and constructive approach between the Agency, the NAAs and the industry. Such an approach shall identify and discuss the issues of the proposed regulation. It appears as a timely and efficient way to cope with these topics, theme by theme, instead of dealing with various standalone but interconnected NPAs. FNAM aims to be an active actor of this work to support Agency's achievement."

The comments hereafter SHALL BE considered as :

A identification of some of the major issues FNAM asks EASA to discuss with third-parties before any publication of the proposed regulation, consistently with, and prior to, the above common and constructive approach.

In consequence, the comments hereafter SHALL NOT BE considered :

As a recognition of the third-parties consultation process carried out by EASA

As an acceptance or an acknowledgement of the proposed regulation, as a whole or of any part of it

As complete : the fact some articles refer to not yet-published (or even not yet-established) pieces of regulation or are not self-consistent prevented FNAM to understand and comment them

As exhaustive : the fact some articles (or any part of them) are not commented does not mean FNAM has (or may have) comments about

them, neither FNAM accepts or acknowledges them

All the following comments are thus limited to our understanding of the effectively published proposed regulation, notwithstanding their consistency with any other pieces of regulation, including with the Basic Regulation 216/200, giving mandate from the Commission and Parliament to EASA.

[1] OJ L 373, 31.12.1991, p. 4.

comment by: *Danish Balloon Organisation*

**General Comments:**

This proposal is clearly based on regulations used for commercial organisations and not suited for sporting club activities.

The JAA regulations took this into consideration by allowing "Registered Facilities" (RF) to train for PPL licenses.

Training for SPL and BPL licenses has until now been based on national regulations very similar to the RF system

If this proposal is implemented as proposed, sporting clubs providing training for club members on a non-profit basis will no longer be able to do so.

The situation is very similar to the Part M proposal where commercial aviation procedures were forced upon our activities.

We are aware of the Basic Regulation requirement for "approved" training organisations but suggest that a "light approved training organisation" should be made possible under conditions very close to the RF system.

This "light approved training organisation" should be approved to train for LPL, SPL, BPL and PPL licenses with no limit to the number of instructors.

If this is not possible, we suggest the following 7 AMC revisions:

**GENERAL COMMENTS :**

In France, flight tests are considered as distinct operations.

According to EASA, flight testing must comply with basic regulation, which is common with all the air operations.

Consequently, qualifications and approvals for flight testing are to be considered as additional requirements.

Therefore, FRENCH FLIGHT TEST CENTER propose to create an additional organisation (**AFTTO**, Approved Flight Test Training Organisation) specialized in flight test training.

Remarks:

1.This proposal takes shape by creating a new subpart which describes AFTTO requirements.

2.AMCs and GMs to PART-OR subpart AFTTO has to be defined.

**Creation of Subpart AFTTO :**

*This subpart has to be inserted in the NPA 22 just after "Subpart ATO".*

SUBPART AFTTO – approved flight test training organisations

## OR.AFTTO.005 Scope

This Subpart establishes the additional requirements to be met by an organisation to qualify for the issue or continuation of an approval to provide flight test training for pilots.

## OR.AFTTO.010 Legal entity and financial resources

(a) An AFTTO shall be an organisation or part of an organisation registered as a legal entity.

(b) An AFTTO shall demonstrate to the competent authority that sufficient financial resources are available to conduct flight test training to the approved standards.

## OR.AFTTO.015 Application

(a) Applicants for an initial approval shall provide the competent authority with:

(1) the following information:

(i) name and address of the organisation;

(ii) date of intended commencement of operations;

(iii) personal details and qualifications of the flight instructors;

(iv) name and address of the aerodromes from which the training is to be conducted, and the name of the aerodrome operator;

(v) list of category of aircraft to be used for training,

(vi) description of the training that the organisation wishes to provide, and the corresponding theoretical knowledge and flight instruction syllabi.

(2) the flight test operational manual.

(b) In the case of a change to the approval, applicants shall provide the competent authority with the relevant parts of the documentation or manuals referred to in (a).

*Comment: For flight test purpose, specify the category of aircraft is sufficient to comply with the need of flight test training. For example : rather than introducing in the list of aircraft "Falcon 20 F-WGAD", "Twin jet-engines 10tons class" is sufficient*

## OR.AFTTO.110 Personnel requirements

(a) A Head of Training (HT) shall be nominated. The HT's responsibilities shall include ensuring that the training provided is in compliance with Part-FCL and Part 21 requirements. The head of training must have extensive experience in the flight test activity as a test pilot in the relevant flight test category.

(b) The ground instructors shall have appropriate knowledge and experience in aviation and flight testing in particular.

(c) The flight test rating instructors shall hold the qualification required by Part-FCL and Part 21 and have experience in the flight test category for which they are demonstrating or monitoring any specific type of flight tests.

*Comment: "Flight test rating instructor" is defined in comments on NPA 17 (PART FCL).*

## OR.AFTTO.120 Record keeping

(a) The following records shall be kept for a period of at least 5 years:

(1) details of ground, flying, and simulated flight training given to individual students;

(2) detailed and regular progress reports from instructors including assessments, and regular progress flight tests and ground examinations; and

(3) information of the qualifications of the students, including the expiry dates of medical certificates and ratings.

(b) The training records shall include a written report by the student for any flight performed including, where applicable, data processing and analysis of recorded parameters relevant to the type of flight testing.

## OR.AFTTO.125 Training programme

A training programme shall be developed for each type of course offered.

## OR.AFTTO.130 Training aircraft and FSTDs

An AFTTO shall have access to a fleet of aircraft or FSTDs containing an adequate number of aircraft and appropriately fitted with flight testing instrumentation.

OR.AFTTO.135 Aerodromes

An AFTTO shall use aerodromes or operating sites that have the appropriate facilities and characteristics to allow training of the manoeuvres relevant, taking into account the training provided and the category and type of aircraft used.

OR.AFTTO.140 Prerequisites for training

An AFTTO shall ensure that the students meet all the prerequisites for training established in Part-FCL and Part 21.

OR.AFTTO.210 personnel requirements

(a) Head of Training (HT). The nominated HT shall:

- (1) have overall responsibility for ensuring satisfactory integration of flying training, synthetic flight training and theoretical knowledge instruction, and for supervising the progress of individual students; and
- (2) have extensive experience in flight test activity.

(b) Chief Flying Instructor (CFI). The AFTTO shall nominate a CFI that shall be responsible for the supervision of flight and synthetic flight instructors and for the standardisation of all flight instruction and synthetic flight instruction. The CFI have extensive experience in flight test training.

(c) Chief Ground Instructor (CGI). The AFTTO shall nominate a CGI that shall be responsible for the supervision of all ground instructors and for the standardisation of all theoretical knowledge instruction. The CGI shall have a practical background in aviation and have undergone a course of training in instructional techniques or have had extensive previous experience in giving theoretical knowledge instruction.

OR. AFTTO.225 Training programme

(a) The training programme shall include a breakdown of flying and theoretical knowledge instruction, a list of standard exercises and a syllabus summary.

(b) The content and sequence of the training programme shall be specified in the training manual.

OR. AFTTO.230 Training manual and operations manual

(a) An ATO shall establish and maintain a training manual containing information and instructions to enable staff to perform their duties and to give guidance to students on how to comply with course requirements.

(b) An ATO shall make available to staff and, where appropriate, to students the information contained in the training manual, the operations manual and the training organisation's approval documentation.

(c) The training manual shall state the standards, objectives and training goals for each phase of training that the students are required to comply with.

(d) The operations manual is described in Part 21 (FTOM)

**Additional AMC to subpart GEN :**

*Those additional AMC are supposed to be included in the text.*

AMC3 (bis) OR.GEN.200(a)(7) Management System - AFTTO

COMPLIANCE MONITORING PROGRAMME – AFTTO

1. Typical subject areas for compliance monitoring inspections for AFTTOs should be :

- a. Facilities;
- b. Actual flight and ground training;
- c. Technical Standards.

2. AFTTOs should monitor compliance with the training and operations manuals they have designed to ensure safe and efficient training. In doing so, they should as a minimum, and where appropriate, additionally monitor:

- a. Training procedures;

- b. Flight Safety;
- c. Flight and Duty Time Limitations, Rest Requirements, and Scheduling;
- d. Aircraft Maintenance/Operations interface.

AMC2 to OR.GEN.200(b) Management System AFTTO  
 SIZE, NATURE AND COMPLEXITY OF THE ACTIVITY – AFTTO

1. Small approved training organisations should have a management system that is appropriate to the size of the organisation and complexity of the activity.
2. For this purpose, AFTTO that employ 20 or less instructors should be regarded as a “small organisation”.
3. AFTTO employing more than 20 instructors should be regarded as an “other organisation”.
4. In determining complexity, the following factors should be considered among others:
  - a. number of aircraft types used for training;
  - b. range of training courses offered;
  - c. geographical spread of training activities (e.g. the use of satellites); and
  - d. range of training arrangements with other AFTTO or ATO.

AMC 3 to OR.GEN.215 Facilities – AFTTO

1. The following flight operations accommodation should be available:
  - a. An operations room with facilities to control flying operations;
  - b. A flight planning room with the following facilities:
    - i appropriate current maps and charts;
    - ii current AIS information;
    - iii current meteorological information;
    - iv communications to ATC and the operations room;
    - v. any other flight safety related material.
  - c. Adequate briefing rooms/cubicles of sufficient size and number.
  - d. Suitable offices for the supervisory staff and room(s) to allow flying instructors to write reports on students, complete records, etc.
  - e. Furnished crewroom(s) for instructors and students.
2. The following facilities for theoretical knowledge instruction should be available:
  - a. Adequate classroom accommodation for the current student population.
  - b. Suitable demonstration equipment to support the theoretical knowledge instruction.
  - c. A reference library containing publications giving coverage of the syllabus.
  - d. Offices for the instructional staff.

**Additional AMC to subpart AFTTO :**

*This subpart has to be inserted in the NPA 22 just after AMC to Subpart ATO.*

SUBPART AFTTO – approved flight test training organisations

AMC to OR.AFTTO.010(b) Legal entity and financial resources

*Same contents than AMC to OR.ATO.010(b)*

AMC to OR. AFTTO.015 Application

*Same contents than AMC to OR.ATO.015 except for #11 : “description of aircraft”.*

*In an AFTTO, the number, class or type of aircraft to be used during the course are defined at the beginning but registration and equipment are not known.*

AMC 1 to OR. AFTTO.125 Training programme

*Same contents than AMC to OR.ATO.125*

AMC 2 to OR. AFTTO.125 Training programme – flight test courses - aeroplanes

*Training programmes are already described in CEV's comments on NPA 17. This items are mandatory. They could be completed by others exercises in accordance with customers, to comply with the number of flight hours.*

**1. FIXED WING (CS 25, CS23 jets and Commuters) **CONDITION 1****

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 10 months
- 60 flights including 15 solo flights – 100 flight hours – 5 flight test reports
- 10 different aircraft used
- 400 hours of ground lectures

The theoretical training includes theoretical exams : Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance : Stabilisation-Tower fly-by (Flight test report)
- Performance :Climb twin engine
- Performance : Take Off Turboprop OEI
- Performance : Take Off Turbofan OEI
- Engine : Turboprop limitation and relight envelope
- Engine : Turbofan limitation and relight envelope
- Handling Qualities : HQR and Flight controls characteristics
- Handling Qualities : Longitudinal Handling Qualities
- Handling Qualities s : Longitudinal manoeuvre stability
- Handling Qualities : Take-Off twin turboprop
- Handling Qualities : Take-Off twin turbofan
- Handling Qualities : Lateral-Directional Handling Qualities
- Handling Qualities : Handling Qualities Evaluation (Flight test report)
- Handling Qualities : Variable stability demo flights
- Handling Qualities : Stalls (Flight test report)
- Handling Qualities : Spins
- Handling Qualities : VMCA
- Miscellaneous : High speed certification test
- Systems: Glass cockpit evaluation (Flight test report)
- Systems : EGPWS
- Systems : TCAS
- Final Evaluation Exercise (Flight test report)
- Final in-flight test

**2. FIXED WING (CS 25, CS23 jets and Commuters) **CONDITION 2****

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 5 months
- 35 flights including 8 solo flights – 50 flight hours – 3 flight test reports
- 7 different aircraft used
- 200 hours of ground lectures

The theoretical training includes theoretical exams: Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance : Stabilisation-Tower fly-by
- Performance : Climb twin engine (Flight test report)
- Performance : Take-Off twin turboprop
- Handling Qualities : Longitudinal Handling Qualities
- Handling Qualities : Lateral-Directional Handling Qualities
- Handling Qualities : Stalls
- Systems : Glass cockpit evaluation (Flight test report)
- Systems : Radionavigation instruments qualification and Integrated

Avionics

- Systems : EGPWS
- Systems : TCAS
- Final Evaluation Exercise (Flight test report)
- Final in-flight test

3. **LIGHT AIRCRAFT** (CS 23 excepted Jets and Commuters, CS 22)  
FLIGHT TEST COURSE – **CONDITION 1**

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 5 months
- 35 flights including 8 solo flights – 50 flight hours – 4 flight test reports
- 7 different aircraft used
- 200 hours of ground lectures

The theoretical training includes theoretical exams : Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance : Stabilisation-Tower fly-by (Flight test report)
- Performance :Climb
- Engine : Limitation and relight envelope
- Handling Qualities : HQR and Flight controls characteristics
- Handling Qualities : Longitudinal Handling Qualities
- Handling Qualities s : Longitudinal manoeuvre stability
- Handling Qualities : Lateral-Directional Handling Qualities
- Handling Qualities : Handling Qualities Evaluation (Flight test report)
- Handling Qualities : Stalls (Flight test report)
- Handling Qualities : Spins
- Miscellaneous : High speed certification test
- System s: Glass cockpit evaluation (Flight test report)
- Systems : TCAS
- Final Evaluation Exercise (Flight test report)
- Final in-flight test

4. **LIGHT AIRCRAFT** (CS 23 excepted Jets and Commuters, CS 22)  
FLIGHT TEST COURSE – **CONDITION 2**

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 2 months
- 15 flights – 20 flight hours – 2 flight test reports
- 3 different aircraft used
- 60 hours of ground lectures

The theoretical training includes theoretical exams : Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance :Climb (Flight test report)
- Handling Qualities : Longitudinal Handling Qualities
- Handling Qualities : Lateral-Directional Handling Qualities
- Handling Qualities : Stalls
- Handling Qualities : Spins
- System s: Glass cockpit evaluation (Flight test report)
- Final in-flight test

AMC 3 to OR. AFTTO.125 Training programme – flight test courses - helicopters

*Training programmes are already described in CEV's comments on NPA 17*

*This items are mandatory. They could be completed by others exercices in accordance with customers, to comply with the number of flight hours.*

1. HELICOPTERS (CS 27, CS 29) **CONDITION 1**

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 10 months
- 90 flights including 20 solo flights – 100 flight hours – 5 flight test reports
- 5 different aircraft used
- 400 hours of ground lectures

The theoretical training includes theoretical exams : Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance : Stabilisation
- Performance : Air speed calibration (Flight test report)
- Performance : Hovering
- Engine : Digital engine governing
- Engine : Free turbine engine evaluation
- Handling Qualities : Static stability
- Handling Qualities : Static stability
- Handling Qualities : Manœuvrability (Flight test report)
- Handling Qualities : Dynamic stability
- Handling Qualities : Maniability (Flight test report)
- Handling Qualities : ADS 33
- Handling Qualities : Tethering rotor assessment
- Handling Qualities : Rigid rotor assessment
- Systems : Navigation Management System
- Systems : Auto pilot
- Systems : Night Vision Goggles
- Systems : Glass cockpit evaluation (Flight test report)
- Miscellaneous : Height/Velocity envelope
- Miscellaneous : Category A clear area procedure
- Miscellaneous : Vibrations and rotor adjustments
- Miscellaneous : Autorotations
- Final Evaluation Exercise (Flight test report)
- Final in-flight test

## 2. HELICOPTERS (CS 27, CS 29) **CONDITION 2**

- Bachelor of Science (Pilots) Master of Science (Engineers)
- 1200 flight hours including 400 as a captain, current CPL IR
- duration of the course : 5 months
- 40 flights including 8 solo flights – 50 flight hours – 3 flight test reports
- 4 different aircraft used
- 200 hours of ground lectures

The theoretical training includes theoretical exams : Aerodynamic, Handling Qualities, Engines, Measurements and Flight Test Instrumentation.

Flight Test Techniques and in-flight training :

- Performance : Stabilisation
- Performance : Air speed calibration
- Performance : Hovering (Flight test report)
- Engine : Digital engine governing
- Engine : Free turbine
- Handling Qualities : Static and dynamic stability
- Systems : Glass cockpit evaluation (Flight test report)
- Systems : Autopilot
- Systems : Navigation Management System
- Miscellaneous : vibration and rotor adjustment
- Final Evaluation Exercise (Flight test report)
- Final in-flight test

comment 1215 comment by: Dassault Aviation

**GENERAL**

The DASSAULT AVIATION following comments aim at including in the Authority Requirements and Organization Requirements the need for audits related to Change Management, Change Notification and Standardization Processes.

Note

The Change Management process is a documented process using standardized methods and procedures that provides effective and immediate management of all changes to courseware, hardware, software, firmware, training content and documentation. This process of controlling changes ensures that :

any changes or proposed changes are accountable in each step of the change or revision process;  
a configuration control is maintained and all changes are traceable;  
the training program(s) are protected against improper modification of courseware, implementation and use.

Dassault considers that these topics should also be addressed in the requirements that will be developed for Training Organizations approval.

comment 1293 comment by: Virgin Atlantic Airways

It is very difficult to make comments on this part without having read all of the NPAs related to Ops & FCL.

NPA 2009-02 adds AMCs to these subparts which shows that all NPAs are linked together and a non exhaustive reading may lead to inefficient comments.

All comment periods should be aligned and sufficient time should be left in order to :

- Familiarize with this totally new structure.
- Read every part in detail and find all the links between the different subparts.
- Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating).
- Ask questions to EASA as many parts raise questions.
- Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.

More time and a cooperative way of working are needed.

comment 1341 comment by: KLM

There should be a choice for (currently) separately approved organizations (such as TRTO, AeMC etc) to be part of the general organization approval or not. For clarity, this should be explicitly stated.

Generally, the NPA tries to address both the "single-privilege" organisation (e.g. Operator only) and the multi-privilege organization (e.g. Operator, ATO, AeMC) at the same time, which leads to many inconsistencies in the rules due to the numerous possible organization setups.

comment 1346

comment by: KLM

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard" , we feel there is a need to create one.
- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?
- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.
- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.
- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?
- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance
  - SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope. Compliance clearly is only

a subdivision / one element of Quality.  
QM may "not become a postholder" as this would limit his freedom to think outside the box.

comment by: *BMVBS (MoT Germany)*

There is no need to rush into a bold venture Europe's aviation sector will later regret!

The quality of a regulatory amendment is highly dependent on the level of maturity of the draft as published for consultation. Ideally, the consultation process should help the Agency to perform mainly a fine tuning to optimize the final rule. The Notice of Proposed Amendment (NPA) No. 2008-22, however, is far from mature. It contains major conceptual mistakes, as it relies on an essentially flawed RIA. In consultation with the German aviation industry it has been assessed that the introduction of the proposed amendment would not only undermine aviation safety due to unclear or incomplete requirements, it would also erode the competitiveness of the European aviation industry at large. Some of the proposed authority requirements are considered illegal, as the basic regulation does not contain a mandate for the development of such detailed Authority Requirements which interfere with Member States' sovereignty.

The situation is considered extremely startling and the German government is increasingly concerned about these developments. We do not consider the proposed amendment suitable to support a process that would converge towards a consensus in the Committee phase of the regulatory procedure with scrutiny, and therefore would strongly advise EASA to re-consider the NPA as an "advanced" NPA that would be followed by a second round of consultation once a consensus on the conceptual approach has been reached. It is already clear at this stage, that this NPA will have to undergo substantial modification to an extent that would require a second round of consultation, if the principle of "better regulation" was to be respected.

In order to substantiate the statement that the RIA is essentially flawed and therefore inappropriate to justify the conceptual decisions taken an independent RIA has been performed by our aviation industry which can be found attached. The conclusions on the suitability and advantages of the GERT system (or even its "spirit") are utterly wrong. What is being presented as "readers oriented structure", thereby suggesting the notion of a customer friendly system is perceived by readers as big disarrangement. What could testify more to this fact than the necessity to use an "e-tool" to find the requirements applicable to a specific case in what looks like a confusing "pile" of requirements? To make it clear: The e-tool does not fix the problem! The fact that an e-tool search might in some cases produce incomplete or erroneous results can not be simply addressed by a disclaimer stating that the actual set of rules are relevant and not the search result. This constitutes in our view a major problem that can only be solved by complete restructuring of the whole set of rules. The structure of the set of regulations is not only illogical it has also been found wanting with respects to its numbering system. The numbering system of paragraphs as presented makes it extremely difficult to navigate through the set of regulations.

In our view the proposed amendment not only fails to achieve the objective to base the implementing rules as much as possible on existing JAA material, it

also fails to safeguard the highly important regulatory continuity, thereby creating incalculable risks for affected stakeholders potentially jeopardizing their very existence.

Against this background the Agency would be well advised to apply itself basic risk management principles with regard to the creation of any new regulatory concept based on regulation no. 216/2008. The way and extent in which the Agency is proposing fundamental and far reaching changes is staggering. Any fundamental conceptual change on the regulatory side must take into consideration that there is a real world out there, that has to be able and willing to adjust, otherwise the process will end in disarray.

Due to the extent and complexity of this rulemaking proposal the deadline of 28.05.09 was still insufficient to coordinate a complete response by the German MOT. The German Ministry of Transport therefore generally endorses and supports the comments brought forward by the Luftfahrt-Bundesamt and German aviation stakeholders whose comments could not be collated and reproduced in due time.

And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be

difficult to make a

definition of "hazard" , we feel there is a need to create one.

- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?

- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.

- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.

- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?

- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance

- SMS is intended to go "beyond compliance";

therefore the Quality Manager should not be called and seen as Compliance manager as this would limit his scope. Compliance clearly is only a subdivision / one element of Quality. QM may "not become a Postholder" as this would limit his freedom to think outside of the box.

comment by: *British Airways Safety & Security*

It is quite difficult to comment on NPA 2008-22 (all sections) in isolation from reviewing/commenting NPA 2009-02. It has not been possible, given the size of the NPAs to conduct these reviews together in the timescales provided by EASA, even though the comment periods have been extended, they do not correspond with each other.

We understand that there are some AMCs and/or GM in other NPAs (2009-02, but maybe others) that cross relate to items in NPA 2008-22. If this is the case, then this needs to be made clear in the NPA that is affected by such, especially given the binding nature of AMCs.

comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*

**European Powered Flying Union, or EPFU**, is a recent European Union gathering national powered flying organisations of the following 10 countries : Austria, Denmark, Finland, France, Germany, Norway, Luxembourg, United Kingdom, Sweden, and Switzerland.

Like other European Unions, EPFU will act at all level to defend the powered flying as a private sports and recreational activity. Consequently, the EPFU is mainly involved in PPL(A) flight training and clubs operating non complex aeroplanes for private pilots.

EPFU comments are made in order to support general principles agreed by its members, leaving them to comment directly to EASA their own detailed opinions and remarks.

***Generally speaking, EPFU believes that the NPA 2008-22, in its all, can be considered as an "Advanced NPA", which needs more work, discussions and dialogue, as far as Small training organisations are concerned. The real situation of non commercial, non profit, Small training organisations, seems quite ignored, or not understood by European Authorities from European Commission and European Parliament, to EASA.***

comment by: *Danish Powerflying Union*

Danish Motor Flying Union (DMU) is a non-profit association representing 35 national aeroclubs.

We do not find the proposal of NPA 2008-22 suitable to organisations run by national aeroclubs. It is our opinion that the proposal is made exclusively for the commercial organisations.

Implementing the rules in present form will make it nearly impossible for a large numbers of organisations run by national aeroclubs to continue educational flight training for members. Training which is based on volunteers and on a non-profit basis. It will reduce the number of Private Pilot Licenses (PPL(A)) and decrease the sources of qualified aviation staff for commercial airlines. For many young European Citizens it will be far to expensive to join a commercial flight school to obtain a PPL (A).

A number of pilots build flight hours working as volunteer flight instructor in small aeroclubs and subsequently move to work in the airline industry.

The "Registered Facility" as we known under the JAA today works excellent and we find it necessary that EASA makes a proposal similar to "Registered Facility". The present proposal for a Basic Regulation requirement for approved training organisations is not adoptable to the structure we have today. We need a "light" approved training organisation with no requirements concerning number of instructors and with no regulations for financial results and reporting.

comment by: *Baden-Württembergischer Luftfahrtverband*

### **Introduction**

The Baden-Württembergischer Luftfahrtverband (BWLTV) is the association of the about 200 aviation clubs in the state Baden Württemberg in the south west of Germany. About 160 of these clubs instruct on aeroplanes, sailplanes, micro lights, balloons and parachutes.

The quite high number of clubs which are partially quite small are spread widely across the country and therefore most people interested in flying can find a club close by giving access to flying at very low cost. This is especially

important so that also young people still at school interested in aviation have the possibility to start flying. This offering is only possible because all functions are executed by volunteers.

A big portion of general aviation activity is happening in the context of these clubs. Here pilots are under close observation and exchange lots of information. Aircraft belong to all members and are often not insured against loss. This leads to a quite rigid control between the members. This infrastructure therefore contributes a lot to the safety in aviation.

It is important to maintain this infrastructure and make sure it is supported by the regulations. This importance is also emphasized in the „*An Agenda for Sustainable Future in General and Business Aviation COM(2007) 869*“.

We have structured our comments to the various paragraphs in up to four parts as appropriate:

Full reference to the passage (FCL.nnnn.XX (x)(n)(n))

#### **Wording in the NPA**

Here we repeat the passage from the NPA which we are specifically commenting

#### **Our proposal**

Here we specify how to change the wording of the NPA. This is either:

**Add:** for an addition of a passage

**Change:** changes in the original wording marked in red

**Delete:** delete a passage

#### **Issue with current wording**

A one sentence description of the problem

#### **Rationale**

A detailed reasoning why we think the change is needed or perhaps why we support the proposal in the NPA.

Our following general comments list issues and rationales which apply to many of the rules in this proposal. We therefore gather them here with detailed rationales and will then refer to them in our comments to the individual rules. This avoids repeating the rationales in multiple comments.

### **General Comments**

#### **1. clubs as ATO**

##### **Issue with current wording**

The in the NPA proposed ruling is in many cases not applicable to the special situation of ATOs run by clubs. Already in the very first paragraph (OR.GEN.001) organizations are linked to business which does not reflect the way non commercial clubs operate. Through out the document it appears that organizations operating non profit oriented purely with volunteers are not considered

##### **Rationale**

In the clubs at least in Germany the training of pilots is conducted as part of the activity of the club with no commercial goals. The instructors are not employees of the club but members as all the other pilots too. The instructors volunteer there service. This service is usually credited against the service

contribution that is required from all members. In most of these clubs the following conditions apply:

- There is no plan for a certain number of students. Training is provided is required by the club members. The number of students therefore can vary a lot.
- The training activity does not contribute to the financial situation of the club, this is solely dependant on the member contributions independent if they are students or not.
- Instructors are not employed, neither full nor half time. Since instructors instruct during there free time voluntarily they can not spend that much time. Therefore many instructors are required relative to the number of students
- Club ATOs will mainly focus on training for LPL licenses and to some extent PPL licenses
- The ATO activity can be very small

Clubs implicitly have quite a high safety level due to the fact that the fleet belongs to all members and is often not even insured. Therefore the club members monitor each other quite closely. Also the typically intense communication in the clubs contributes to the safety.

Fore these reasons many of the criteria e.g. for the complexity (AMC to OR.GEN.200(b) ) or the financial resources (AMC to OR.ATO.010(b) do not apply.

## **2. check and training flights required by organizations**

### **Issue with current wording**

Conditions for check flights and training flights required by organizations is not clear

### **Rationale**

Possibly this belongs in the part covered by NPA 2008-17b but it is linked to organizations. Many operations renting out aircraft as well as flying clubs require check and training flights beyond the requirements of the part FCL. E.g. when checking out a new customer or member, a check/training flight at the beginning of each flying season, a check flight/training flight if a pilot has not flown for a certain time or just if the impression occurs that a pilot is unsafe. Of cause also a pilot himself feeling unsafe may require assistance. For flights with instructors in these cases it should be clearly defined:

1. that the instructor is the pilot in command
2. that the instructor can count this time as instruction time e.g. for revalidation of the instructor certificate
3. The flight is appropriately documented in the pilots log book

At least in Germany this was never clearly regulated and led to many discussions and uncertainties.

It benefits safety if pilots have easy access to instructors and instructors are motivated to assist pilots.

## **3. Safety Management in non commercial ATO's**

### **Issue with current wording**

Safety management is over regulated for ATO's for PPL,SPL,LPL especially if non commercial operations are concerned. This is counter-productive and does not follow the principle of subsidiarity ( [www.europa.eu/scadplus/glossary/subsidiarity\\_en.htm](http://www.europa.eu/scadplus/glossary/subsidiarity_en.htm) ).

Issues in consistency are to be expected on small airports not regulated at European level where non commercial ATO typically operate.

#### **Our Proposal**

Safety management in non commercial ATO should not be regulated at European level.

#### **Rationale**

ATO's offering only courses for PPL, SPL or LPL operate on a local basis. Based on the principle of subsidiarity safety management regulation by the EU should be kept to a minimum for these organizations. Over regulating safety management by too many formalities will distract from relevant safety measures. Especially in clubs safety is much better served by ensuring a social culture that supports safety which can not be forced by formal rules. We strongly support making safety the top objective of any organization linked to aviation. But measures must be tailored appropriately. One of the most substantial contributors to safety is personal responsibility. Top down regulation is a killer for personal responsibility. Training and raising of awareness are more important for safety than formalities.

Safety management of an ATO is closely linked to the safety management of the airport. Small airports where non commercial ATO are typically based are currently excluded from regulation at European level. A consistent safety management for non commercial ATO would be difficult to achieve therefore.

#### **4. Registered Facility**

##### **Issue with current wording**

The concept of a registered facility as defined in the JAR-FCL. is missing.

##### **Our proposal**

Adopt the concept for a registered facility from JAR-FCL

##### **Rational**

The concept of the registered facility according to JAR-FCL is adequate to non profit training organizations. Since 2003 the non profit training organizations are operating successfully as RF with a high training and safety standard.

comment by: *ACI EUROPE*

#### **Overall presentation of the NPA**

The precedential impact of the GEN Parts contained in NPA 22 on the regulation of aerodromes lacks of sufficient transparency. The consultation process for the GEN provisions is considerably impeded if GEN provisions that are considered to be equally applicable to other aviation domains, currently not in the scope of EASA, are hidden in an NPA that is obviously only addressed to approved training organizations, aeromedical centres, licensing and medical certification of flight crew. Most airports might not have realized that this NPA

has a considerable impact on the future regulation applicable to them.

The Comments made to this NPA by ACI EUROPE and its members only reflect a small membership due to the fact that it is not clearly outlined by EASA what may be applicable for aerodromes and what not. ACI EUROPE would like to stress that we found it extremely difficult to give statements on the NPA without having a clear outline of what might impact aerodromes in the future.

comment 1796

comment by: ACI EUROPE

### **Documentation**

The draft decision describes documentation requirements on several levels. The Management System shall include the Safety Management Manual (SMM), but in 8.d. it is stated that the SMM may be a chapter in the Organisation Manual. The requirements for an Organisation Manual is defined in GM to OR.GEN.200(a)(6), but here it is stated that the content may be contained in other manuals, e.g. Aerodrome Manual, Operations Manual or Training Organisation Manual. In AMC 1 to OR.GEN(a)(7) a requirement for documentation of a Compliance Monitoring System is described in item 5, but here it is stated that the "relevant documentation should include the relevant part(s) of the Organisation Manual. The documentation structure is not very clear and should be clarified and simplified.

Especially the relationship between the Organization Manual and the Aerodrome Manual needs clarification. With the requirement for an Organization Manual an additional documentation burden is being introduced. This requirement can easily be accommodated by requiring a dedicated chapter on the aerodrome organization in the Aerodrome Manual. ICAO Document 9774 already requires particularities on the aerodrome organization and the aerodrome operators Safety Management System to be described.

comment 1797

comment by: ACI EUROPE

### **Management System**

The requirement for a Management System including safety and compliance monitoring is mainly based on the legacy of airline regulation by the Joint Aviation Authorities and might not be appropriate to aerodrome regulation. The compliance monitoring requirement is mainly a transposition of the Quality Management System (QMS) requirement for aircraft operators according to the existing JAR-OPS 1.035 provisions. The proposed Management System structure aims at adding a SMS component to the QMS component already existing in the former JAA regulated aviation domains.

According to ICAO Annex 14, airports need only have a Safety Management System (SMS). The monitoring of safety compliance is already a part of the airport SMS. It would rather be preferable to expand the compliance monitoring function in the scope of the SMS. An elaboration of the compliance monitoring function into the SMS would avoid the fragmentation of powers in safety oversight in an organization if both a SMS Manager and a Compliance Manager is to be nominated.

comment 1799

comment by: ACI EUROPE

### **Transition measures**

The Transition Measures described in NPA 2008-22a article 44. – 46. does not

take into account the need of aerodrome operators. Transition measures for aerodromes would have to take into account the proposed requirements for structure, systems and documentation that go beyond that of ICAO and many national requirements that could cause significant change to management of aerodromes. The impact on organisational structures, staffing, processes and procedures would have to be analysed and plans for transition and implementation of the new requirements would have to be drawn up. Implementation may require organisational changes, recruitment of staff, development of documents and implementation of new processes and procedures. All changes would have to be managed with regard to safety, and risk analysis would have to be executed as appropriate. Any risk mitigating measures would have to be implemented before the transition is final.

comment 1800

comment by: ACI EUROPE

### **Regulatory Impact Assessment**

The challenges with regard to transition measures give an indication on where the impact must be assessed. The impact assessment must also include increased cost with regard to staffing, documentation and documentation management that is caused by introducing requirements on aerodromes beyond the ICAO provisions.

comment 1802

comment by: AIR FRANCE

There should be a choice for (currently) separately approved organizations (such as TRTO, AeMC etc) to be part of the general organization approval or not. For clarity, this should be explicitly stated. Generally, the NPA tries to address both the "single-privilege" organisation (e.g. Operator only) and the multi-privilege organization (e.g. Operator, ATO, AeMC) at the same time, which leads to many inconsistencies in the rules due to the numerous possible organization setups.

comment 1803

comment by: AIR FRANCE

It is quite difficult to make comments on this part without having read the whole NPAs related to Ops & FCL.  
NPA 2009-02 adds AMCs to these subparts which shows that all NPAs are linked together and a non exhaustive reading may lead to inefficient comments.  
All comment periods should be aligned and sufficient time should be left in order to :

- Familiarize with this totally new structure
- Read every part in detail and find all the links between the different subparts
- Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating
- Ask questions to EASA as many parts raise questions
- Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.  
More time and a cooperative way of working are needed to produce a good regulation.

comment 1806 comment by: *International Air Transport Association (IATA)*

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard" , we feel there is a need to create one.
- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?
- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.
- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.
- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such

as the MOE? In other words: what will the new document structure be?

- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance
- SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope. Compliance clearly is only a subdivision / one element of Quality.

comment by: British Airways Safety & Security

The experience of British Airways is that there is not clarity in the industry on a number of specific topics and, without clear and simple definitions, the rules and regulations are open to misinterpretation and potentially legal challenge. The items that are included in the list of (as far as we have been able to determine) undefined topics are:

Compliance Monitoring  
 Safety Audits  
 Quality Assurance  
 Risk Management  
 Safety Management

This list is not exhaustive though.

comment 1920 comment by: *British Airways Safety & Security*

Our understanding that the principle of having a subpart ATO (and not calling it TRTO) was that the IRs were to cover all training organisations, including maintenance training organisations. There are a number of specific IRs that clearly cover only TRTO requirements. This principle does not appear to have been followed through in this NPA.

comment by: ERA

This NPA is tied with NPAs 2009-01 and 02. The size of these individual NPAs has made it almost impossible to fully understand the changes proposed. In addition the different phraseology used makes it very difficult to carry out comparison between new and old regulations.

For example how can a full review of this NPA be carried out when the additional AMCs to the IRs of this NPA 2008□22 are published in NPA 2009□02. No sound comment can be given before a complete review of all the NPAs has been completed.

In addition it is difficult to make comments without having read the whole NPAs 2009-01 & 2008-17. Therefore, all comment periods should be aligned and sufficient time should be left in order to:

Familiarize with this totally new structure

Read every part in detail and find all the links between the different subparts

Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating

Ask questions to EASA as many parts raise questions

Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.

In many aspects fundamental differences have been introduced compared to EU-OPS. There is no legal basis and no safety justification for EASA to fundamentally alter the EU-OPS requirements.

A co-operative way of working is needed to produce a better regulation. Would it not be an improvement to retain EU-OPS and apply IR changes to the individual subparts over a period of time? This would enable a greater understanding of the proposed changes and reduce confusion.

Generally, the NPA tries to address both the "single privilege" organisation (e.g. Operator only) and the multi-privilege organization (e.g. Operator, ATO, AeMC) at the same time, which leads to many inconsistencies in the rules due to the numerous possible organization setups.

With respect to SMS, the following questions could be raised and observations can be made in support of the general comment:

The "Hazard identification processes" and "Risk assessment and Mitigation processes".

- o What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities?

"Clearly defined lines of safety accountability".

O The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?

SMS: Safety Performance monitoring and measurement:

o iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.

SMS: the Safety Manager.

o Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group?

The Organisation Manual:

o is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE?

"Compliance monitoring" as opposed to Quality Management and Quality Assurance.

o This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance.

§ SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope.

comment by: *CANSO*

We refer to the NPA 2008-22c for a Commission regulation establishing the implementing rules for the competent authorities, including general requirements for approved training organisations, aeromedical centres, licensing and medical certification of flight crew.

CANSO wish to draw the attention to EASA officials that they cannot support if this proposal would be applied for ATM providers in the frame of the future extension of EASA's competence to ATM.

Indeed, Member States (in particular their NSA and the ANSPs) have applied the Commission Regulation(EC) No 2096/2005 of 20 December 2005 laying down Common Requirements for the provision of air navigation services. This Regulation is presently more appropriate for organisations involved in ATM domain. All the Air Navigation Service Providers have been certified based on this Regulation to the satisfaction of the ATM community.

comment by: *Icelandair*

There should be a choice for (currently) separately approved organizations (such as TRTO, AeMC etc) to be part of the general organization approval or not. For clarity, this should be explicitly stated.

Generally, the NPA tries to address both the "single-privilege" organisation (e.g. Operator only) and the multi-privilege organization (e.g. Operator, ATO, AeMC) at the same time, which leads to many inconsistencies in the rules due to the numerous possible organization setups.

comment 2164

comment by: *Icelandair*

It is quite difficult to make comments on this part without having read the whole NPAs related to Ops & FCL.

NPA 2009-02 adds AMCs to these subparts which shows that all NPAs are linked together and a non exhaustive reading may lead to inefficient comments.

All comment periods should be aligned and sufficient time should be left in order to :

- Familiarize with this totally new structure
- Read every part in detail and find all the links between the different subparts
- Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating
- Ask questions to EASA as many parts raise questions
- Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.

More time and a cooperative way of working are needed to produce a good regulation.

comment 2165

comment by: *Icelandair*

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard" , we feel there is a need to create one.

- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?

- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.

- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.

- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?
- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance
  - SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope. Compliance clearly is only a subdivision / one element of Quality.

comment by: *Svenska Ballongfederationen*

General opening comments:

The following comments to this NPA are the official comments of Svenska Ballongfederationen (Swedish version of BBAC).

Almost all Swedish balloonists are organized in Svenska Ballongfederationen, SBF for short. SBF is the national non-profit balloon organization. SBF has through its flight school and training organization performed the main part of training for balloon certificates for thirty-five years.

We see some problems with this NPA which we will address in the following parts. Our main concern is the classification of "small organisation" and "other organisation".

We are more than happy to take part in further discussions about this if you need clarifications on the comments or suggestions on how to solve these problems. Feel free to contact us at [uu@ballong.org](mailto:uu@ballong.org).

comment 2271

comment by: *EAAPS*

The commenting on this NPA must be seen as preliminary because of the interdependencies between this NPA and the NPAs on FCL and OPS. Only a few examples shall highlight the difficulties:

1. The understanding of AMCs and the differentiation between hard law i.e. IRs and soft law i.e. AMCs is unclear with regard to the application in Part FCL. There are syllabi now as IRs in some cases which would require a full rulemaking procedure for a change in a syllabus. This is not acceptable since there is a need to react in a timely manner.

2. The further development of training is not considered as a process in the

document. For some ATOs there is a need to have an approval as a training development organisation similar to the approved design organisation. Suitable prerequisites and requirements for such an approved organisation are not available and must be developed.

3. Any upcoming changes in the related Parts FCL and / or OPS must imply the option to adopt this draft. The necessary involvement of stakeholders in reaction to such changes is unclear.

comment

2282

comment by: *Light Aircraft Association of the Czech Republic*

Light Aircraft Association of the Czech Republic is a competent authority for Certification, Licencing and Operation of microlights in the Czech Republic.

This covers paragliding, powered paragliding, hang gliding, gyroplanes, helicopters, weight shift and aerodynamically controlled microlight.

In this respect it is unique in Europe

It has 6 400 members and registers 7 900 aircraft and 10 000 pilots.

LAA ČR thinks that proposed changes in the present NPA were not what the light aviation community asked for. We asked for a stand-alone European or even Global LSA category (covering all basic four areas of aviation activity - Initial airworthinnes, Maintenance, Licensing and Operations), compatible with LSA category in the United States. That is why it is politically necessary to establish a balanced set of simple regulations , which will be acceptable to their users in different Member states, without detrimental affects on flight safety.

At the same time the Annex II must be protected until this new proposed system will prove that it can be as successfull as the Annex II system.

On the other hand, no bureauticac regulation should be introduced for the sake of harmonisation/standardisation without a serious justification through a proper RIA proces.

Unfortunately RIA process presented in this NPA 2008-22a cannot be considered as proper from the point of view of Sport and Recreational Aviation. This is mainly because no relevant data from our sector of aviation were used.

The document as a whole is in fact unreadable for ATOs for the LSP and SPL, because it is not possible to distinguish material that applies to the LPL and SPL and what not.

**Proposal:**

LAA CR has provided comments in this NPA because we hope that this will allow EASA to understand that the proposals in this NPA 2008-22 are not suitable for the Sports and Recreational Aviation.

LAA CR believes that in this present form NPA 2008-22 is disproportional and not fit in sports and recreational aviation training environment and it should be discharged for Sports and Recreational Aviation.

There is a serious risk that the successful light aviation (represented by the modern microlights) will be killed by the present proposals.

LAA CR would welcome to work with EASA to develop a revised approach to this rulemaking task that will take into consideration the needs of the Sports and Recreational Aviation community.

comment

2297

comment by: *Deutscher Aero Club Landesverband Niedersachsen*

The Deutscher Aero Club Landesverband Niedersachsen (LVN) is the association of about 100 aviation clubs in the state Lower Saxony of Germany and member of the Deutscher Aero Club (DAeC) as roof organisation of air sport in Germany.

Most of the clubs organised in the organisation instruct on aeroplanes, sailplanes, micro lights, and parachutes.

The clubs are spread across the country and are therefore located close to most of the people interested in flying and give access to flying at very low cost. This is especially important to allow young people to start flying to reasonable costs and quality. This is possible because all functions are executed by volunteers.

One goal of regulation should be the protection of the existing successful working structure of aviation and in this case air sport for further development of the market.

It is important to maintain the given infrastructure and to implement supportive regulations. This importance is also emphasized in the „*An Agenda for Sustainable Future in General and Business Aviation* COM(2007) 869“.

## **1. clubs as ATO**

### **Issue with current wording**

The in the NPA proposed ruling is in many cases not applicable to the special situation of ATOs run by voluntary driven air sport clubs.

### **Rationale**

In the clubs at least in Germany the training of pilots is conducted as part of the activity of the club in a non profit orientated organisation. The instructors are not employees of the club and members as all the other pilots too. The instructors volunteer there service. This service is usually credited against the service contribution that is required from all members. In most of these clubs the following conditions apply:

- ∅ There is no plan for a certain number of students. Training is provided as required by the club members. The number of students is highly variable
- ∅ Training does not influence the financial situation or income of the club as it is provided without any fees for the students.
- ∅ Instructors are not employed, neither full nor half time. Since instructors instruct voluntarily the resources concerning time availability are limited. Therefore many instructors are required relative to the number of students. Additionally, bureaucratic burden has to be strictly minimized to ensure concentration on the major requirements of the training in the clubs.
- ∅ Club ATOs will mainly focus on training for LPL licenses and to some extent PPL licenses
- ∅ The ATO activity can be very small

Clubs implicitly have quite a high safety level due to the fact that the fleet belongs to all members. Therefore the club members monitor each other quite closely. Also the typically intense communication in the clubs contributes to the safety.

Fore these reasons many of the criteria e.g. for the complexity (AMC to OR.GEN.200(b) ) or the financial resources (AMC to OR.ATO.010(b) to not apply.

## **2. Safety Management in non commercial ATO's**

### **Issue with current wording**

Safety management represents clearly over regulation for ATO's for PPL,SPL,LPL especially if non commercial operations are concerned. This is counter-productive and does not follow the principle of subsidiarity. ( [www.europa.eu/scadplus/glossary/subsidiarity\\_en.htm](http://www.europa.eu/scadplus/glossary/subsidiarity_en.htm) ).

### **Rationale**

ATO's offering only courses for PPL, SPL or LPL operate on a local basis. Based on the principle of subsidiarity safety management regulation by the EU should be kept to a minimum for these organizations to ensure the further existence and development of these organisations. Over regulating safety management by too many formalities and bureaucratic burden will distract from relevant safety measures. Especially in clubs safety is much better served by ensuring a social culture that supports safety which can not be forced by formal rules. Acceptance of rules and proceedings in aviation is a more promising way to increase safety. We strongly support safety as one top objective of any organization linked to aviation. But measures must be tailored appropriately. One of the most substantial contributors to safety is personal responsibility and top down regulation is a killer for personal responsibility. Training and raising of awareness are more important for safety than formalities.

comment 2336

comment by: *Icelandic CAA*

We are in agreement with the approach used developing the Organizational Requirements drafts presented in NPA 22C. The model used is likely to satisfy industry and NAAs in a productive manner. The merging of the SMS and QMS principles and requirements into a single management system is done in a balanced way.

It is however questionable if it is correct to remove entirely the definition of Quality in relation to compliance monitoring, since compliance monitoring can be seen as a process that fits perfectly well within the scope of a quality management system. It is however noted that 'compliance' has far more weight than 'fitness of use for the end user' in the context of the organizations affected by the regulatory requirements referred to.

comment

2362

comment by: *European Sailplane Manufacturers*

For the European sailplane manufacturers it remains totally unclear how this proposed new regulation will be applied in the world of small and sport aviation.

This Part-OR will be applicable to all types of organisations....?  
So what about design / production / maintenance organisations?  
So what about typical organisations of our sector like clubs and federations?

The regarding competent authority will be the authority of the regarding member state...?

What about multi-national federations?

Why not delegation to the existing national aero-clubs and other air-sport organisations?

All the definitions like management / place of business / action plans / management system / contracting / facilities / record keeping - how could these be applied to clubs consisting of people spending their spare time to go flying?

And last but not least:

All procedures and approvals...

... who is supposed to pay for all these - does anybody realise that here much money will have to be spent without a real benefit for the persons concerned?

The European sailplane manufacturers need a clear statement from EASA and the European commission that this regulation will not be applicable in this proposed form toward the non-profit sector of small and sport aviation in Europe.

comment by: *Holger Scheibel*

Sehr geehrte Damen und Herren,

für den Bereich Ballonfahrt möchte ich gerne einige generelle Hinweise geben, um Schlussendlich eine, in der Umsetzung gerade für diesen von sehr speziellen Rahmenbedingungen geprägten Bereich im Dienste der Sicherheit eine praxisorientierte, Zielsetzung zu ermöglichen.

Der Gesamtmarkt der PPL-D Ausbildungen in der Bundesrepublik Deutschland beträgt gegenwärtig geschätzt ca. 25 Schüler pro Jahr.  
Diese Anwärter verteilen sich auf die gesamte BRD!

Wichtig für deren Ausbildungsbedingungen erscheinen mir besonders folgende für die Ausbildungsdokumentation wichtigen Bedingungen:

Es gibt kein weiteres Luftfahrzeug was nur innerhalb solch enger Betriebsgrenzen hinsichtlich des Wetters betrieben werden kann.  
Ausbildungsfahrten können z.B. unter Meidung der Thermik im Sommer nur in der Zeit von 05:30 bis 07:30 loc bzw. 19:30 bis 21:30 loc stattfinden.

Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen daher nicht möglich. Aus diesen Gründen verteilt sich die Ausbildung zeitlich auf in der Regel wenigstens 12 bis 18 Monate.  
Schüler die sich dieses Hobby noch leisten können haben immer weniger Zeit dazu.

An diesen wenigen Tagen ist dann oft nicht gleich das passende Wetter bzw. ein Wetter das nicht zum jeweiligen Ausbildungsstand passt...

Diese Besonderheiten in der Ballonausbildung führen zu folgender Konsequenz: Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer ca. 1,5 h + der Reisezeit vor dem geplanten Start.

Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Dieses hat natürlich einen erheblichen Einfluss auf die wirtschaftlichen Möglichkeiten beim Betrieb eines solchen Luftfahrzeuges.

Gerade dadurch ergibt sich schon die Notwendigkeit aus Kostengründen unnötige finanzielle Belastungen für Ausbildungsbetriebe für verzichtbare Nachweise und Dokumentationen zu verhindern.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden.

Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung mehr oder weniger ausgerichtet haben.

1. Problem dabei: Für 20 Schüler durch die Republik verteilt findet sich nicht mehr immer ein von der Qualität und den Kosten her guter Lehrgang.

Schon gar nicht gleich zum Wunschtermin...

2. Problem: In der Folge finden sich immer mehr Angebote die aus Wettbewerbsgründen eine immer schlechtere Qualität liefern.

Abhilfe kann hier nur eine klare Vorschrift über Inhalt und Dauer der notwendigen Unterrichtseinheiten schaffen.

Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen ('Organisationen') aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Die Entwicklung zu immer kleineren Ausbildungsorganisationen bedarf deshalb einer stärkeren Kontrolle um den bestehenden Qualitätsanspruch zu erfüllen.

Ziel sind qualifizierte Piloten und deren Entwicklung braucht einen genauen Rahmen, der gerade dieses fördern soll.

Einschränkungen sind aber zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Hier sollte nicht der einzelne Lehrer im Vordergrund stehen sondern die jeweilige Organisation unter deren Führung der Lehrer steht.

Hilfreich erscheint mir dazu die Einführung praktischer Kontrollen der Ausbildung in den Betrieben durch Senior Prüfer vor Ort.

Im Spannungsfeld zukünftig ggf. sinkender Lehrerzahlen und dem erhöhten Prüferbedarf

denke ich müssen die Arbeit und die Zeiten als Prüfer weiter die Lehrberechtigung aufrecht erhalten.

Um eine klare Ebenen der Regelungen für ATO's zur Ballonpilotenausbildung zu schaffen

sollte eine AMC für 'Ballon - ATO's' geben.

Eine Obergrenze für die Anzahl beteiligter Lehrberechtigter/Schüler in einer solchen Ballon - ATO sollte es nicht geben, da einige Vereine viele Ausbilder aber nur wenige Schüler haben. Dadurch haben auch diese Lehrer die Möglichkeit ihre Lehrberechtigung aufrecht zu erhalten.

Daher sollte die Beschränkung der Ausbildung für Ballon - ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglich sein.

I m Ergebnis muss also die Kontrolle und Anleitung der Betriebe durch die Luftfahrtbehörden stehen .

Dieses muss unbedingt einen unwirksamen Berg von Papier/ Dokumentationen und deren Kosten verhindern.

Mit freundlichen Grüßen/ Best regards

comment by: FAA

**General Comment:**

The FAA Certificated Flight Schools (14 CFR part 141) and Flight Training Centers (14 CFR part 142) along with Airline Training Centers (14 CFR part 121) and private instruction conducted by individual certificated flight instructors (14 CFR part 61) provide flight training for a significant portion of EASA Member States' pilots. US training organizations received over 12,000 requests for training from EU Member State pilots in 2008; over 44,000 requests have been received since October 2004.

The EC regulation expanding EASA's competency requires EASA approvals for instructors, simulators, and training organizations located outside the EU. NPA 2008-17, *Implementing Rules for Pilot Licensing*, and NPA 2008-22, *Authority and Organization Requirements*, define the requirements for those approvals. Meeting these requirements could have a significant economic impact on US industry and may not be economically viable for some organizations. Taking up the training load will overburden the current European training system and could compromise safety.

The FAA and EASA have a well established working relationship. However, much work remains to be done to address emerging issues in flight simulators and training organization approvals. We must continue to work together to harmonize requirements where possible and to develop bilateral agreements that will ensure the safe and smooth transition to the new European requirements.

comment

2449

comment by: Norwegian Air Sports Federation, Gliding Section

## General comment:

The Gliding Section of the Norwegian Air Sports Federation agrees with the comments to NPA 2008-22c submitted by the European Gliding Union. The proposed regulations appear to be overly complex and restrictive to apply to non-commercial training organisations, run by clubs on a volunteer basis, as is the case for most sailplane training organisations in Europe.

comment

comment by: CB

In case of commercial air transport, the manual requirements are rather confusing and do not provide legal certainty. We do not see any safety justification for EASA's proposal which is a fundamental departure from EU-OPS. Proposal: realign with EU-OPS

**TITLE PAGE**

p. 1

comment

420

comment by: Federal Office of Civil Aviation (FOCA), Switzerland

## General Comment:

1) The GERT structure chosen by EASA is by far more complicated than the

well structured JAR rules. Most users are not able to cope with the modular approach. The present draft is in conflict with the basic principles of understandable rule setting of the Community and must be changed entirely, in order to be user friendly and more coherent for the regulated organisations and authorities.

2) EASA should base its current rulemaking on the JARs. The proposed rules go much further than what the common market and a level playing field in Europe demands. EASA is not entitled to regulate purely domestic affairs. The IR should not go beyond the necessary minimum which has well been defined by the JARs and needs no further enlargement.

3) The mechanism of AMCs is not based on the basic regulation and, therefore, to be considered illegal and has to be entirely revised or fully abrogated. The present draft would lead to a derogatory situation where industry and NAAs will not know any more what is possible and what is forbidden. The AMC mechanism, therefore, will jeopardise safety and legal security. Furthermore, it will hamper European competitiveness in the global market.

comment

778

comment by: *European Business Aviation Association (EBAA)*

Summary.

In general, the comments (or lack of them) reflect a level of acceptability of the need for SMS as part of continuous safety improvement; however there is real concern about the lack of reference to guidance material. In general, operators would rather have clear, unambiguous requirements that are clearly defined. The definition of a small company is obviously inappropriate and simplistic.

1. Small Operators should not be defined in terms of 20 employees. If there is to be a boundary allowing a simpler means of achieving SMS compliance it should be defined in terms of the complexity of the operation. Operators will want clear definitions in order to comply with requirements.

2. The description of training requirements should be expanded to recommend the inclusion of Human Factors awareness training to align non-operational employees with the safety risks inherent with certain levels of human performance and interaction. Many companies already demonstrate good practice in this area with derivatives of HF training courses aimed at the non-Crew employees.

3. Due to the presentation, layout and lack of references to GM, there **must** be a more user-friendly approach to EASA material. This comment will probably be made repetitively as we go into the next stage. We should push for the development of (intuitive) software applications to aid accessibility of the rules, the AMC's and references to Guidance Material.

4. SMS' are a new arrival. It might be useful to have a diagram to support the rules that adds a pictorial element by means of an introduction of where SMS fits into the whole panoply of Safety management in a small business.

5. Hazard Identification should be preceded by the word "proactive" for Small Operators as with Other Operators and Change Management requirements are especially important and often lacking with Small Operators.

6. It is very important to identify a common set of safety risks to Business Aviation, in the same spirit as the CAA's "airlines significant seven". This would be a worthwhile EBAA/IBAC initiative on behalf of the industry and could feed into the operators SMS' when appropriate.

7. The relationship between the Management Systems, Safety Management System, Quality System and Compliance Monitoring can be confusing. There appears to be overlap between the Compliance Monitoring requirements and the Quality Departments, auditing activities. Once again, in line with the principles of performance based rulemaking, the question of complexity and size of operation should determine how this requirement can best adequately be accomplished and by whom.

comment by: *Royal Danish Aeroclub*

The Royal Danish Aeroclub have a general comment.

Organisations for members only, run by aeroclubs should have the same possibilities as they have today.

It is important to keep the volunteer based clubs and organisations in our society - and not only create rules for the professional run company.

comment

1020

comment by: *Fédération Française Aéronautique*

**FFA general comments on EASA NPA 2008-22c**

All the FFA comments are only related to aeroplanes as defined in subpart A in FCL 010. They do not concern sailplanes or balloons.

The 580 French powered flying aero-clubs or associations, and their 45,000 private pilots, gathering together in the FFA, act as :

Small air operators,

Small ATOs,

Small aerodrome operators,

They are non profit organisations, managed by unpaid volunteers.

FFA strongly supports the concept of non complex aeroplane and ELA, the concept of a Leisure Pilot Licence, and the concept of a LAFI certificate.

But FFA does not support at all the change of "registered training organisations" included in the JAR-FCL1, into "Approved Training Organisations" laying in the Essential Requirements of Basic Regulation. FFA believes that this major change is a real mistake and shows a total ignorance on the real life of thousands of aero-clubs and associations throughout Europe.

FFA thinks that a "Very small training organisations" must be defined in addition to "large ATO" and "small ATO" definitions given in AMC1 and AMC2 to OR GEN 215.

**So, FFA proposes** the following definition of a "**Very small flight training organisation**" : *A non commercial, non profit, flight training organisation, providing training for Basic LPL, LPL, and PPL only, on non complex aircraft, in VFR conditions (night rating or IMC rating included), and possibly managed by volunteers.*

In the following comments, the words "Very small organisation" refers to this

definition.

If an approval is necessary for all flight training organisations, **an adapted and specific "Light approval procedure" must be implemented** for this "Small flight training organisations"

FFA requests that organisations will be offered, for free by EASA, booklets specific to each type of organisation that will contain the whole requirements related to its activity. The E.Tool proposed by EASA seems interesting to work on published NPAs (this point still to be confirmed), but not adapted to a current use in "Very small" or "Small ATO".

FFA asks for clarification about the vocabulary used by EASA. Although this NPA deals with the implementing rules, the text often refers to requirements, which are supposed to be reserved to the Essential Requirements of the regulation (EC) 216/2008.

FFA insists upon adding "Basic LPL" every time a provision deals with "LPL and PPL". For instance, it should read "ATOs providing training for *Basic LPL*, LPL and PPL". The reason is that the Basic LPL is a license by itself and shall not be forgotten. Legal certainty!

The fact that the basic LPL could be considered as a subpart of the whole LPL which in turn could be considered as a subpart of the PPL shall not lead not to consider it as a regular licence, as the others.

(General Comments)

It is quite difficult to make comments on this part without having read the whole NPAs related to Ops & FCL.

NPA 2009-02 adds AMCs to these subparts which shows that all NPAs are linked together and a non exhaustive reading may lead to inefficient comments.

All comment periods should be aligned and sufficient time should be left in order to :

- Familiarize with this totally new structure
- Read every part in detail and find all the links between the different subparts
- Get the missing documents (for example, NPA on TCO, CS-MMEL, CS-Pilot Type Rating
- Ask questions to EASA as many parts raise questions
- Write comments.

This process cannot be fully implemented in the timeframe provided by the Agency.

More time and a cooperative way of working are needed to produce a good regulation.

comment by: TAP Portugal

(General Comments)

From the viewpoint of current Part 145 organisations with respect to SMS, the following questions can be raised and observations can be made in support of the general comment:

- The "Hazard identification processes" and "Risk assessment and Mitigation processes". What the one organisation considers a hazard, the other does not. And that might create huge differences across the board in follow-up and mitigation activities. We sense a non-level playing field. Although it will be difficult to make a definition of "hazard" , we feel there is a need to create one.
- "Clearly defined lines of safety accountability". The question arises as to what the accountability structure will be for organisations under the new concept of certification. For instance, will there be an accountable manager for Part OR? If, under the proposed concept of certification, there is no more accountable manager for Part 145, would then for Part 145 the ultimate accountability for safety rest with the accountable manager of Part OR , or if such a function does not exist, would it rest with the accountable manager for the complete organisation ?
- SMS: Safety Performance monitoring and measurement: iv: safety audits. What is exactly meant here ? Should this not be part of Compliance Monitoring? We need a proper definition.
- SMS: the Safety Manager. Again, is there only one Safety Manager for the complete organisation with all its aviation activities? And is there one Safety Review Board and one Safety Action Group? Or , if there still is an accountable manager for the Part 145, then we assume we will be able to arrange these activities under the Part 145 approval.
- The Organisation Manual: is there only one manual for the complete organisation with all its aviation activities or will there still be documents such as the MOE? In other words: what will the new document structure be?
- "Compliance monitoring" as opposed to Quality Management and Quality Assurance. This NPA also lacks a definition of "compliance monitoring". We feel there is a strong need to properly document the interrelationship between Risk management, Safety management, Compliance monitoring and the current concept of Quality Management and Quality Assurance
- SMS is intended to go "beyond compliance"; therefore the Quality Manager should not be called and seen as Compliance Manager as this would limit his scope. Compliance clearly is only a subdivision / one element of Quality.

Danish Soaring Association has been deeply involved in comments from the Royal Danish Aeroclub and comments from European Gliding Union as well. As these organizations comment on NPA 2008-22 (a,b,c) they express our opinion in all aspects, and we therefore do not intend to repeat what already has been noticed – only that these regulations will not work in a voluntary environment such as gliding among others. They have to be revised in accordance with what is said from national aeroclubs, Europe Air Sport and European Gliding Union.

comment by: *British Gliding Association*

The British Gliding Association is currently the organisation that delivers gliding flight training in the UK. Through its training organisation, managed and staffed almost exclusively by volunteers, the BGA training organisation provides the training required to exceed the requirements of ICAO Annex 1 (glider pilot licencing) and satisfy existing Law.

While the BGA understands the need for standardisation and the need for detailed rules for *commercial air transport and complex aircraft training*, there is no safety case in gliding that would require regulation beyond that which would standardise existing practices across the member states. This will of course require dialogue between EASA and the gliding federations through the European Gliding Union.

The European gliding community, like other air sport communities, finds that safety is increased through the adoption by the air sport of self regulation and

high levels of pilot 'currency'. Prescriptive regulation has an adverse affect on recreational attitudes to safety. The costs associated with regulatory burden reduce the amount of flying carried out by sporting pilots. The long term negative effect on piloting skill and therefore safety is well understood.

The BGA is concerned that the views of the European gliding community and its collective experience, safety data and knowledge were not consulted during the development of the NPA 2008-22 and associated RIA. Indeed, the BGA is disappointed that regulatory proposals which have the potential to adversely affect gliding have been developed without the drafting group understanding the risk that EASA is attempting to mitigate.

The BGA has provided comments in this NPA that it hopes will allow EASA to understand that the proposals with NPA 2008-22 are clearly not written with gliding training organisation in mind. **The following comments within this NPA response are made despite the BGA view that the proposals within NPA 2008-22 in its present form are disproportional, are not based on a measured safety case, do not address the complexity, volunteer nature and specific needs of sport gliding and therefore are not fit for purpose in a gliding training organisation context.** The BGA would strongly welcome the opportunity to work with EASA through the European Gliding Union and Europe Air Sports to develop a revised approach to this rulemaking task that takes into consideration the needs of the European gliding community as well as those of EASA.

comment 685 comment by: *Aero-Club of Switzerland*

Question: Will there be "non-approved" training organisations?  
We think of training organisations for "Annex II" aircraft or training organisations in a transformation phase.

comment 1677 comment by: *CAA CZ*

ATO audit report specimen in Part OR should be added, as e.g. in Part 147 - EASA Form 22 (AMC 147.B.110(a) and Appendix III) and was - JAA Standard Document N° 152 (see AGM/JIP, Section Five, Part 2, Chapter 15).

## **B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN**

p. 4

comment 164 comment by: *DGAC FRANCE*

**General comment**  
In Part OR and specifically OR.GEN.015, the word « approval » means, among other things, certification. In Part AR and specifically AR.GEN.005 (a), the word « approval » used in paragraph 1 doesn't designate the certificates and other attestations and licences, used in 3. This word isn't defined precisely and therefore, only "certification" should be used in PART AR an PART OR, as in the basic regulation

comment 428 comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*

Comment:

The definition of Organisation should be deeper specified. Subpart "Air Operators" is completely missing.

Proposal:

Air Flight Operators should be completely included or completely excluded in NPA 2008-22.

1035

comment by: *European Gliding Union (EGU)*

Page 4

OR.GEN.001

The initial wording of the NPA indicates clearly by using the terminology 'place of business' that this is another paper meant for commercial air traffic applications. The Deutscher Aero Club e. V is a non profit organisation with "activities" i.e. training, maintenance etc. spread all over Germany. The activities are purely performed for the members without any financial interest.

Recommendation: For application with General Aviation and here specifically air sports the term needs to be altered into either "activities" or "interest"

comment

2156

comment by: *EUROCONTROL*

### **Scope**

As stated in the paragraph 23 of the NPA 2008-22a:

*"the objective of the Agency [EASA] was to develop operational rules that would be integrated in a global regulatory system for aviation safety, covering not only airworthiness, but also in the future the safety regulation of air traffic management / air navigation services (ATM/ANS) and aerodromes. All these considerations lead the Agency [EASA] to conclude that changing the way rules are structured and presented could provide for better consistency and facilitate their use by the regulated persons".*

This is the main reason why this NPA is of particular interest to EUROCONTROL.

The EUROCONTROL comments on the NPA 2008-22 are however confined to its possible impact on the development of Implementing Rules (IRs) as part of the extension of EASA responsibilities in the ATM/ANS field.

Moreover, the comments do not prejudice on any future contribution of EUROCONTROL in the Formal Rulemaking Groups which will develop these implementing rules.

Therefore the comments will address only:

- The structure of the EASA Requirements - 2008-22a (pages 10-14).
- the Authority Requirements (2008-22b), subpart GEN (pages 4-11) and associated AMC
- the Organisation Requirements (2008-22c), subpart GEN (pages 4-10) and associated AMC

The comments do not cover all the details, as this will be the work of the Formal Rulemaking Groups.

### Organisation Requirements (2008-22c)

The general requirements of 2008-22c tackle a number of aspects already covered by ESARRs / EC regulations/ directives in the ATM domain. This should not lead to conflicting provisions or departure from original wording. In addition, the way the NPA tackles the requirements for organisations gives the impression of "cherry picking". We always advocate that the extension of EASA responsibilities to ATM/ANS should entail a full transposition of existing safety requirements.

General comments on the ORs.

There are several cases where provisions which are mandatory today in European/international Law (for ATM, mainly Regulation 2096/2005 – CRs - and corresponding ESARR 3, 4 and 6 requirements) are downgraded to AMC level. The approach taken to the drafting and subsequent approval of ESARRs was the "objective based" regulation. The CRs are reflecting this approach as the requirements for SMS are transposed from ESARRs.

Therefore these requirements are already high-level and the balance made by SRC and confirmed when transposing ESARRs into EU Law should be adopted by EASA.

One good example of this downgrading is illustrated by the requirements for Risk assessment and mitigation (RAM).

The provisions for explicit Risk assessment and mitigation are in the AMC to OR.GEN.200.

One organisation, implementing the requirements in OR.GEN can choose to do it by implementing the AMC proposed by EASA or by a different alternative means.

In the case of changes to ATM functional system, one ANSP could choose an alternative means to RAM. However, in the ATM today, the RAM requirements in ESARR 4 and CRs are the means of ensuring that the risks associated with all changes to the ATM functional system are managed within safety levels and they are already EU Law.

The only explicit reference to a Safety Management System – SMS is in the AMC!

Currently, both SES and ICAO require service providers to implement SMS. We would therefore propose that the regulatory approach taken by EASA should reflect the use of SMS, which has been developed and implemented over many years as a central principle of safety in ATM.

More details of the overlap between requirements already covered by ESARRs / EC regulations/ directives and the balance Requirements/AMC proposed in the NPA are to be found in the Matrix between the EUROCONTROL / SES requirements and the EASA Essential Requirements/ proposed AR and OR in NPA 2008-22, as contributed in the framework of the EASA ATM/ANS Group.

comment by: *Royal Danish Aeroclub*

Royal Danish Aeroclub have with big worries read the proposed regulation. We have to underline that we do see the regulation for to much for volunteer based organisations. Implementing the regulations in the suggested form will

be very harmful to the air sports and the privat flying done in clubs.

It is important to keep regulations simple and easy to understand for the volunteer instructor and the volunteer manager.

The suggested regulations do maybe fit big commercial operators - but is not able to help the flying clubs and federations.

Furthermore, we do see regulations suggested in an area where the normal private consumer protection should be enough. There is no reason for EASA to start implementing regulations in the area "financial results and reporting". It is not fair for private operators to have other business demands than other branches. Selling service (flight instruction etc.) should not have special and more demanding regulations that selling service in other areas (i.e. selling diving courses). We do of course support regulations for safe flying, but not for safe business.

comment by: MOT Austria

a. Change the following in (a) (2)

a) For the purpose of this Part, the competent authority shall be:

(2) In the case of Flight Simulation Training Devices (FSTDs):

(i) For FSTDs **the authority designated by the Member State where the training organisation using the FSTD has its principle place of business.**

~~used by training organisations certificated by the Agency, or FSTDs located outside the territory of the Member States or FSTDs located within the territory of the Member States, if so requested by the Member State concerned, the Agency;~~

~~(ii) In all other cases, the authority designated by the Member State where the training organisation using the FSTD has its principle place of business.~~

For FSTDs used by training organisations having their principle place of business located in a third country or FSTDs located within the territory of the Member State, if so requested by the Member States concerned, the Agency;

Justification:

Rewording to make clear, principally the NAA of the MS where the FSTDs are located is the competent authority, the Agency only in specific cases. The competence is adequately regulated in the basic regulation, the text would be not required.

comment

2061

comment by: MOT Austria

OR.GEN.001 last sentence

For the purpose of this Part, principal place of business is intended to means the

**head office of the** organisation site from which the majority of the organisation's management personnel specified in OR.GEN.210 directs, controls or coordinates its operational activities, ensuring that the organisation complies with the requirements of this Part. **within which the principle financial functions and operational controls of the activities approved in line with the relevant articles of the Regulations are exercised.**

Justification:

This should be in line with the basic regulation (EC) 216/2008 and (EC) 1008/2008.

but it is recommended to transfer the definition of "principle place of business" to a generic section definition.

comment 2309

comment by: DGAC FRANCE

The scope of OR should be clearly defined.  
It is understood that OR applies only to "organisations" and not to products or persons. This should be clearly stated. In some paragraph it deals with persons which is contradictory with the title.

The generic part of the OR is very short, and it is wondered why it could not be repeated in specific parts related the specific activities : OPS, ATO, ...

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 1 -  
OR.GEN.001 Competent authority**

p. 4

comment 80

comment by: CAE

OR.GEN.001 (b) The definition of Principle place of Business makes it difficult for a Global Organization with management spread out to define its PPOB.  
Prefer:

"For the purpose of this part, principal place of business is intended to mean the organization site from which the majority of the organizations management personnel specified in OR.GEN.210 directs, controls or co-ordinates its operational activities, ensuring that the organization complies with the requirements of this Part or the organization site from which the majority of the training for EASA students is conducted or Legal Entity is established."

comment 116

comment by: Bristow Academy

Suggest inserting:

(a) (1) (ii) .....country, the Agency, ***who may delegate responsibility to the competent Authority of the most appropriate Member State taking into consideration previous approvals issued and common language.***

The rationale behind this being the retention of the relationship & trust between the National Authority and the ATO which will have taken considerable time to develop and should be retained.

comment 120

comment by: DCA Malta

**OR.GEN001 (a) (2)**

Text is not clear and there can easily be confusion between the use and the operation (provision) of an FSTD, that is, between what is now called 'user approval' and the actual FSTD certification.

comment 163

comment by: DGAC FRANCE

**OR.GEN.001 (a)**

Comment

1. « competent authority » must be defined in AR and not OR. In fact the mention of products (FSTD) in OR is very confusing. Placing the definition of

the competent authority in PART AR will avoid this difficulty

2. « Principle place of business » need also to be defined in AR according to the new definition agreed in the Regulation 1702.

comment 209

comment by: ECA- European Cockpit Association

Comment on paragraph (b): change text as follows:

(b) For the purpose of this Part, principal place of business ~~is intended to mean~~ means the organisation site from which the majority of the organisation's management personnel specified in OR.GEN.210 directs, controls or coordinates its operational activities, **and it carries out the largest part of its flights in or from the Community**, ensuring that the organisation complies with the requirements of this Part.

Justification:

ECA thinks that the phrase 'the PPB is "intended" to mean' is not appropriate. Either it means it or there should be another definition. It is a weak statement and should be strengthened, as the competent authority shall be in all cases that of the place where the airline has the majority of its flights, in order to avoid operators shopping around for the most "lenient" authority to obtain its AOC.

The Commission has stated several times in different regulations that there is a strong link between economic regulation and safety. The proposed text is not clear enough and leaves room for interpretation. In particular, there is a lack of clarity as to what is considered as "operational activity" and when this activity is deemed to be "substantial".

comment 254

comment by: CAE

OR.GEN.001 (a) (1) (ii) Training organizations that have a long history with one member state authority would like to not risk unnecessary change to their operations by changing member state authorities. Prefer:

"for organizations having their principle place of business located in a third country, the Agency, who will have direct oversight using EASA resources or will delegate responsibility to the most appropriate member state taking into consideration previous approvals and common language."

comment 268

comment by: Susana Nogueira

(a)(2)(ii) This paragraph need clarification. We propose the following text:

In all other cases, the authority designated by the Member State where the FSTD **is located**

For example: A FSTD located in France with certification issued by French Authority operated by a FTO/TRTO approved by Spanish Authority. According to the draft text, the competent Authority should be the Spanish Authority, according our proposal the competent Authority should be the French Authority, and this is right in our opinion

comment 269

comment by: Susana Nogueira

(a)(2)(i) change 'used' by '**operated**'

comment

309

comment by: UK CAA

**Page No:**

4 of 33

**Paragraph No:** OR.GEN.001 (a)(2)

**Comment:**

The means of identifying the competent authority for the purposes of FSTD qualification has been changed from that presented previously by EASA. The competent authority for FSTD qualification and issue of the related certificate would more appropriately be that designated by the Member State where the FSTD is located.

**Justification:**

EASA has clearly identified in documented presentations made to the Expert Group and to the wider industry through the RAeS Flight Simulator Conference and other forums that the responsibility for qualifying simulators located in a Member State will be that MS's responsibility. Such a system is appropriate because the qualification and certification of the FSTD equipment on the basis of Certification Specifications is independent from the approval of the ATO that operates the FSTDs. The ATO approval will address the management systems of the ATO and whether there is satisfactory compliance monitoring of all the organisation's FSTDs wherever they are located. Certification of the FSTDs by different competent authorities in no way undermines that approval process.

Responsibilities for certification and approval are different and allocated to the most appropriate competent authority. Cooperation between the competent authorities involved will be necessary, in accordance with AR.GEN.030 (sharing of information) and AR.GEN.355 (activities in more than one Member State), taking into account CAA proposed amendments to those requirements. Specific guidance material on how such cooperation should work with regard to ATO approvals and FSTD qualification / certification would be appropriate.

An FSTD qualified by the state of location to standardised Community regulatory standards will allow better use of limited specialist inspecting expertise, will reduce resource requirements (reduced travel) for the inspectors and associated costs to industry without affecting the qualification standards.

**Proposed Text (if applicable):**

Proposed revised text for OR.GEN.001 (a)(2): -

(2) In the case of Flight Simulation Training Devices (FSTDs):

(i) For FSTDs located outside the territory of the Member States or FSTDs located within the territory of the Member States, if so requested by the Member State concerned, the Agency;

(ii) In all other cases, the authority designated by the Member State where the FSTD is located.

comment

381

comment by: OAA Oxford

Clarification required. OR.GEN.210 refers to the Accountable Manager and 'A person or group of persons'. In the case of a group of company's, this suggests that the geographical location of the company at which the Accountable Manager is based determines the appropriate competent authority.

Is this the intention?

comment 596

981

comment by: Swedish Transport Agency, Civil Aviation Department  
(Transportstyrelsen, Luftfartsavdelningen)

**Comment:**

We support the idea that the management of an organisation must be included in a definition but it cannot be the only requisite. The majority of the management personnel in an organisation might alter from time to time. This could create confusion between different authorities as to whether an authority is competent or not. Therefore, in order to bring more stability into this concept, the head office of an organisation or, if any, its registered office must also be included in the definition. Furthermore we suggest that a freezing period of the principal place of business is introduced for one year. The said is based on an assumption that the head office or, if any, registered office remains in the Member State unchanged. The definition of principal place of business in (b) is also linked to fees and charges in order to finance the different activities of a Competent Authority. A good example of a definition of Principal Place of Business can be found in article 2 (26) of Regulation (EC) No

1008/2008. However, the definition in this Part must be of a more generic nature.

We would also like to emphasize that it is the organisation that primarily has to point out its principal place of business in its application for an organisation approval. The authority that receives the application must evaluate and decide whether it is competent to try the application. If the authority is not competent it has to dismiss the application.

If an organisation's principal place of business is different than the organisation address (registered office) this information should be stated in the application.

**Proposal:**

1. Revise text in accordance with our above comments and use definitions that are already accepted in EC legislation, such as the definition of principal place of business in Regulation (EC) No 1008/2008.
2. Introduce a freezing period of the principal place of business.
3. As regards AOC holders, the definition of "principal place of business" *must* coincide with the definition in Regulation (EC) No 1008/2008.

comment

1064

comment by: *EUROPEAN GLIDING UNION*

OR.GEN.001

The use of the terminology 'place of business' indicates that these rules are written from a commercial perspective. Although gliding federations and their clubs operate using appropriate commercial acumen and good practice in order to exist and thrive, they do not operate as for-profit commercial operations but rather organise activities for their members on a not-for-profit basis. The key distinction is that any financial surpluses in members' clubs are not distributed to 'owners' but are re-invested in the development of the club for members' benefit.

Proposal. Change the wording "business" to "activity".

Relevant text: (b)

Comment: The definition of 'principal place of business' differs from the definition in article 2, sub 26 of EU 1008/2008. Will lead to confusion.

**Proposal:**

In line with the EASA claim that no rule shall appear more than once: refer to 1008/2008 as the first and therefore traditional place where this definition has been made, as a repetition of the definition will lead to **incompatibility with EU ruling principles. No thing must be duplicated ! Under no circumstances ! Never !**

comment 1495 comment by: BMVBS (MoT Germany)

The definition of 'principal place of business' differs from the definition in Regulation No. 1008/2008 (article 2, No. 26). Since this regulation is binding Community Law the definition in the implementing rule shall be adapted accordingly in order to ensure consistency and legal clarity.

Recommended amendment of the text:

~~(b) For the purpose of this Part, principal place of business is intended to mean the organisation site from which the majority of the organisation's management personnel specified in OR.GEN.210 directs, controls or coordinates its operational activities, ensuring that the organisation complies with the requirements of this Part. 'principal place of business' means the head office or registered office of an organisation in the Member State within which the principal financial functions and operational control, including continued airworthiness management, of the organisation are exercised.~~

comment 1570 comment by: bmi

For FSTDs located in a third country, the Agency should as a matter of priority work on establishing bilateral agreement with third country Authorities. The aim should be to avoid duplicated oversight and associated burden for industry and authorities

comment 1892 comment by: *DCAA*

(b) (b) This article includes the 4. definition of "Principal Place of Business" we have seen for the past few months. One common definition should do.

comment 1939 comment by: *IACA International Air Carrier Association*

(a)(1)(i)

This will change the current competency dramatically when applying to Part-21 Design Organisations, since with the creation of EASA, the competence for certification and airworthiness was taken from NAAs and centralised within EASA.

How can an organisation hold a single approval certificate with different competent authorities? e.g. an operator has to deal with the authority of its principal place of business of its air operations but with EASA for its DOA ?

comment 1960 comment by: *Walter Gessky*

a. Change the following in (a) (2)

a) For the purpose of this Part, the competent authority shall be:

(2) In the case of Flight Simulation Training Devices (FSTDs):

(i) For FSTDs **the authority designated by the Member State where the training organisation using the FSTD has its principle place of business.**

~~used by training organisations certificated by the Agency, or FSTDs located outside the territory of the Member States or FSTDs located within the territory of the Member States, if so requested by the Member State concerned, the Agency;~~

~~(ii) In all other cases, the authority designated by the Member State where the training organisation using the FSTD has its principle place of business.~~

For FSTDs used by training organisations having their principle place of business located in a third country or FSTDs located within the territory of the

Member State, if so requested by the Member States concerned, the Agency;  
Justification:

Rewording to make clear, principally the NAA of the MS where the FSTDs are located is the competent authority, the Agency only in specific cases. The competence is adequately regulated in the basic regulation, the text would be not required.

comment 1962 comment by: *Walter Gessky*

OR.GEN.001 last sentence

For the purpose of this Part, principal place of business is intended to mean the

**head office of the** organisation site from which the majority of the organisation's management personnel specified in OR.GEN.210 directs, controls or coordinates its operational activities, ensuring that the organisation complies with the requirements of this Part. **within which the principle financial functions and operational controls of the activities approved in line with the relevant articles of the Regulations are exercised.**

Justification:

This should be in line with the basic regulation (EC) 216/2008 and (EC) 1008/2008.

but it is recommended to transfer the definition of "principal place of business" to a generic section definition.

comment 2050 comment by: *ERA*

For FSTDs located in a third country, the Agency should be able to have bilateral agreement with third country Authorities.

The definition of 'principal place of business' differs from the definition in article 2, sub 26 of EU 1008/2008. Will lead to confusion.

comment 2257 comment by: *Europe Air Sports PM*

Europe Air Sports (EAS) response - it is not necessary to repeat here the introductory details about EAS and its overall comments as shown in the response to NPA22a.

comment 2268 comment by: *Oxford Aviation Academy*

Paragraph (2)(i) would suggest that for FSTDs located on non-EU Member State 'soil' the competent authority is the Agency. If an organisation, with its principle place of business located in a Member State, operates FSTDs as part of its organisational activities in non-EU Member States, we propose that the competent authority for FSTD oversight is that determined by the principle place of business criteria and not the Agency. Oxford Aviation Academy operates over 50 FSTDs in EU and foreign jurisdictions and it would make sense to have one competent authority responsible. We believe there is no safety case to justify otherwise, especially as the devices are operated within the overall ATO approval.

comment 2324 comment by: *FINNAIR*

For FSTDs outside the EU, the Agency should be mandated for co-operation with the applicable Authority; bilateral agreements/approval processes in order to rationalise the work and to lower the costs.

comment 2328 comment by: *FINNAIR*

Relevant text: (b)

Comment: The definition of 'principal place of business' differs from the definition in article 2, sub 26 of EU 1008/2008. Could lead to confusion. Should be lined up.

comment 2439 comment by: *FlightSafety International*

Add "who will have direct oversight using EASA resources or will delegate responsibility to the most appropriate member state taking into consideration previous approvals and common language."

Training organizations who have a long history with one member state authority would like to not risk unnecessary change or disruption to their operations by changing member state authorities.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 1 - OR.GEN.010 Definitions**

p. 4-5

comment 147 comment by: *Civil Aviation Authority of Norway*

The defintions are only related to flight training devices, and should therefore be transferred to Subpart ATO.

4

**Paragraph No:** OR.GEN.010

**Comment:** As noted with respect to paragraphs 27 and 43 of 2008-22a, the lack of definitions for "organisation" and "persons" causes confusion, especially in the area of operations.

**Justification:** Article 3(h) of Regulation (EC) No. 216/2008 (the Basic Regulation) defines an operator as "any legal or natural person, operating or proposing to operate one or more aircraft". In this NPA it seems commercial operators and non-commercial operators of complex motor-powered aircraft are treated as "organisations". However this only becomes evident from reading NPA 2009-02a (paragraph 32). It should be made clear at the very beginning of the general section of OR.GEN – perhaps in the definitions. See also comment against OR.GEN.040

**Proposed Text (if applicable):** "Organisation" includes any commercial air operation and any non-commercial operation of complex motor-powered aircraft".

comment

311

comment by: UK CAA

**Page No:**

5 of 83

**Paragraph No:** OR.GEN.010**Comment:**

Change definition of BITD model to delete reference to "model".

**Justification:**

The definition for BITD has been changed incorrectly from JAR FSTD to add the term "model" which is misleading as the definition is a hardware and software combination. A "model" implies software model only. Additionally the definition is already accepted in the regulatory environment and industry.

**Proposed Text (if applicable):**

Definition of BITD in OR.GEN.010 to read:

*Basic Instrument Training Device (BITD)*

A defined hardware and software combination, which has obtained a BITD qualification.

comment

383

comment by: ALSIM Simulateurs

**Proposed text:**

Qualification Test Guide (QTG).

A document designed to demonstrate that the performance and handling qualities of an FSTD are within prescribed limits with those of the aircraft and that all applicable requirements have been met. The QTG includes both the aircraft and FSTD data used to support the validation.

For FNPT and BITD, it is a document designed to demonstrate that the

performance and handling qualities of an FSTD are representative to those of the aircraft or within the class of the aeroplane and that all applicable requirements have been met. The QTG includes both aircraft and FSTD data, or other sources as deemed necessary by the FSTD manufacturer to support the validation according to the AMC n° 1 to CS-FSTD(A).300.

Comment:

For FNPT and BITD, the source data can come from other sources than a single aircraft datum.  
(In accordance with BOOK 2 SUBPART C – AEROPLANE FLIGHT SIMULATION TRAINING DEVICES AMC No. 1 to CSFSTD(A).300 Qualification basis §1.5.4 page 2-C-2)

The definitions are only for FSTDs. There is a need for more definitions like :  

- Declaration
- Nominated Post Holder

comment 1022 comment by: *Fédération Française Aéronautique*  
Having noted that the text sometimes refers to an "organisation" and sometimes to "a person" and "an organisation", FFA suggests to specify in this paragraph that an organisation may be constituted by one or more persons, and to use only the term "organisation".

comment 1023 comment by: *Fédération Française Aéronautique*  
FFA considers that it is of great importance to precisely define "Small organisations" as "DOA, POA, CAMO, MOA, MTOA, "Small operators" operating ELA 1 / 2 aeroplanes, "Small ATOs" (or "Very small ATOs") for basic LPL, LPL, PPL, BPL and SPL, AeMCs" in reference with the NPA 2008-22a (page 106 table

48).

comment 1024 comment by: *Fédération Française Aéronautique*

FFA asks for a specific definition for "Small operators" because some rules apply to this category of organisations (for instance, AMC 4 to OR GEN 200 a 7, page 32).

comment 1037 comment by: *European Gliding Union (EGU)*

OR.GEN.010

The definition section only reflects on FSTD.

Recommendation: The definition section needs to be covering all definitions used in this Part OR.

The information given in relation to "small" and "other" organisations is not argument based and must be related to present organisations.

The work done at Deutscher Aero Club is based on volunteers. Only very few people are "employed" and those mainly in member service areas. Pilot training and maintenance is done by volunteers with no contractual connections to the German Aero Club at all.

comment 1066 comment by: *EUROPEAN GLIDING UNION*

OR.GEN.010

Only definitions in relation with FSTD are mentioned.

Proposal. All possible and necessary definitions used in this Part OR are provided here. In addition, a precise and justified description of "small" and "other" organisations should be provided.

The terminology "employed" is generally not applicable to air sport organisations as the activity is carried out by their members who are almost exclusively volunteers including instructors and examiners. Some very large clubs employ a few staff members to support the voluntary activities of the members, but without commercial goals.

comment 1148 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)***COMMENTS**

The terms are exclusively defined "for the purpose of this part", while in parallel, no such definition is given for part-AR. Moreover, they might be used in other parts of the IR.

**PROPOSAL**

If the so-given definitions apply both for part OR and part-AR, sentence could be rewritten " for the purpose of part-OR and part AR ..."

If the so-given definitions apply to a wider range, it might be explained in specific part of the EASA regulation framework may contain a comprehensive and exhaustive list of definitions, applicable to the whole EASA regulation.

**JUSTIFICATION**

For instance, "FSTD" is extensively used in part-AR and in part FCL  
See comment AR-GEN-005 :

---

Comments:

*At this step, terms and definitions appear unclear.*

Proposal

*We suggest a specific part of the EASA regulation framework may contain a comprehensive and exhaustive list of definitions, applicable to the whole EASA regulation, which is the best way to have consistent definitions.*

Justification

*This might be a legal issue regarding the scope of understanding and cause problems of reading*

---

*Maintenance organisations regret that definitions only concern operators and not maintenance organizations.*

\*\*\*\*\*

Disclaimer :

*These comments are limited to the part of the proposed article they refer to. Since some articles refer to not yet-published (or even not yet-established) pieces of regulation or are not self-consistent, these comments are also limited to their understanding not considering the regulation as a whole. We reserve our final point of view to the issuance of a consistent and fulfilled framework of regulation. Some additional comments shall arise.*

*The fact this article is commented SHALL NOT BE considered as an acceptance or an acknowledgement of the proposed associated regulation, as a whole or of any part of it.*

*FNAM has requested a delay for commenting and proposed to EASA to settle meanwhile a common and constructive approach between the Agency, the NAAs and the industry in order to identify and discuss the issues of the proposed regulation. comment by: UK CAA

**Page No:**

5 of 83

**Paragraph No:** OR.GEN.015 (b)**Comment:**

This paragraph requires the applicant to submit documentation demonstrating how they will comply with the requirements and associated AMC. This includes the organisational approval, the privilege to operate simulators and the qualification thereof, but gives no guidance as to what is required. It is proposed that EASA introduce some guidance material to this part to help a new applicant prepare an effective submission.

**Justification:**

Experience in company approval activities (Part 145, part 21 and Part M subpart G for example) shows that at least for an initial company approval, the initial submissions from a potential approved organisation are often poor because they are not aware or do not understand what documentation is required or what would be appropriate to submit. This results in a lot of additional time in reviewing and re-iterating documentation, which is not an effective use of regulatory resource. Guidance material would be of great benefit in assisting new applicants in this respect.

**OR GEN 015b)/ OR GEN 030a)**

Do these § deal with the organisation's approval (that is to say the structure of the operator) or with the approval certificate (that is to say AOC)?

If a new approval is created for the organisation of the operator:

- it should be stated clearly.
- is such an approval required for operators that need a declaration?

DGAC doesn't support the new idea of organisation approval.

If this paragraph deals with approval certificate (that is to say AOC):

- it should be stated clearly which operators are concerned with these paragraph.
- OR GEN 040 seems to give all the information an applicant to a declaration is supposed to give to the Authority. Why is there no such paragraph for the AOC?

comment 1025

comment by: Fédération Française Aéronautique

FFA understands that the form to apply for an approval shall be established and provided by the competent authority. Not by EASA.

Conversely, the form provided under AMC to OR ATO 015 reads "application form for approval of a training organisation".

This is an inconsistency which should be clarified.

FFA favours the former, not the latter.

comment 1038

comment by: European Gliding Union (EGU)

OR.GEN.015

The "form and manner of application" for an approval will be set by the C.A.

Only clear requirements can establish a uniform European wide "form and manner of application". Competent Authorities have to be strictly bound to this requirements in order to have the so often mentioned "level playing field" for all participants.

comment 1069

comment by: EUROPEAN GLIDING UNION

OR.GEN.015

"The form and manner of application for an approval will be set by the CA."

Proposal. The application should be guided by clear EU requirements to ensure that CAs do not add requirements to those required by the rules.

This is to ensure that the so-often quoted "level playing field" is not endangered by NAAs, ending up with (again) 27 different systems, such as is

becoming evident with Part M!

comment by: ECA- European Cockpit Association

Comment:

Further text should be developed for each category of approval, such as ATOs, CAT operators and others. This could be done by the inclusion of it in the content of the Operations manual.

This paragraph should be further developed, as it was in the JAR FCL and OPS, where items of the approval required further approval or which ones need only notification to the Authority. Leaving this power to each NAA with each operator they grant approval is not a good procedure for harmonization. ECA requests to maintain the JAR.OPS 1.1040 b) and i) requirements, the associated IEM and its JIPs.

- ADR OR needed explaining the forms and procedures for application  
AMC's needed to support ADR.OR

comment 1497 comment by: *BMVBS (MoT Germany)*

One of the central aspects of the AMC concept is the legally non-binding nature of AMCs. Consequently, applicants have to demonstrate how they will comply with the (legally binding) Implementing Rules. They may use the acceptable means of compliance adopted by the Agency for this task but they do not have to show how they will comply with the AMCs. Therefore, the mentioning of the AMCs has to be deleted here.

Recommended amendment of the text:

(b) Applicants for an initial approval shall provide the competent authority with documentation demonstrating how they will comply with the requirements established in this Part ~~and associated acceptable means of compliance adopted by the Agency.~~

comment 1645 comment by: *CAA CZ*

We recommend to add „and all relevant“:

(b) Applicants for an initial approval shall provide the competent authority with documentation demonstrating how they will comply with the requirements established in this **and all relevant** Parts and associated acceptable means of compliance adopted by the Agency.

comment 1751 comment by: *Norwegian Air Sports Federation*

There is need for an AMC to OR.GEN.015 to ensure equal treatment by all CA's, at least an application form as an Appendix to this part.

OR.GEN.015

"The form and manner of application for an approval will be set by the CA."

EAS would wish EASA to restrict the ability and scope of the CAs to create an overly demanding, bureaucratic and expensive application / approval process for ATOs. No 'gold plating' please!

Proposal

The application should be guided by clear EU requirements to ensure that CAs do not add requirements to those required by the rules.

This is to ensure that the so-often quoted "level playing field" is not endangered by CAs / NAAs, delivering 27 different systems across the EU, or creating a money-making machine at the expense of air sports clubs / federations.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 1 -  
OR.GEN.020 Acceptable Means of Compliance**

p. 5

comment 10

comment by: *Regierung von Oberbayern-Luftamt Südbayern*

Das neue Rechtsinstitut der "Acceptable Means of Compliance (AMC)" soll nach dem Willen der EASA ein flexibles Rechtssystem unter Wahrung der Chancengleichheit, Transparenz und Harmonisierung gewährleisten (Nr. 38). Ein Großteil der Entwürfe NPA No. 17a bis c, 22a bis c besteht daher aus AMC`s. Sobald eine "Organisation", also z. B. eine Flugschule, einen begründeten Vorschlag macht, ein AMC, das Bestandteil der Genehmigung der Flugschule ist, zu ändern, da die Sicherheitsanforderungen der Implementing Rules gewahrt seien, ist die zuständige Behörde verpflichtet, diesen Antrag zu prüfen. Diese Prüfung und Verbescheidung hat nach AR.GEN.020 (c) binnen eines Monats nach Antragstellung zu erfolgen. Soweit die EASA nach Prüfung der Alternative Means zur Auffassung kommt, die Sicherheitsanforderungen seien nicht gewahrt, sind entsprechende Maßnahmen der zuständigen Behörde zu treffen.

Grundsätzlich halten wir es zwar für einen diskussionswürdigen Ansatz, den von den Regelungen betroffenen Organisationen künftig verstärkt die Möglichkeit einzuräumen, sich selbst aktiv am Normsetzungsprozess zu beteiligen. Möglichkeiten zur Änderung der AMC`s sollten in der Tat künftig möglichst flexibel und mit wenig Zeitaufwand gestaltet werden.

Wir halten es jedoch für den falschen Ansatz, die Hauptverantwortung für die Änderung von AMC`s zunächst auf die nationalen Behörden zu delegieren. Damit wird gewissermaßen ein Gesetzesinitiativrecht jeder Luftfahrt-Organisation eingeführt, dem eine Prüfungs- und Verbescheidungspflicht auf Seiten der nationalen Behörde korrespondiert.

Zum einen dürfte es den nationalen Behörden kaum möglich sein, die sicherheitsrechtlichen Erwägungen zu erfassen, die der Gesetzgeber (EASA) im Sinne hatte. Zum anderen erscheint die Prüfungspflicht binnen eines Monats als illusorisch: Zunächst sind etwaige technische oder medizinische Detailfragen zu klären, für die nicht in jeder (nachgeordneten) Behörde der notwendige Sachverstand vorhanden sein wird. Zum Anderen wird auch eine Abstimmung mit übergeordneten Behörden (auf Landes- und Bundesebene) erforderlich sein, um eine einheitliche Verwaltungspraxis zu gewährleisten.

Offentlichtlich wurde übersehen, der EASA auch eine Prüfungspflicht der vorgelegten AMC`s binnen einer bestimmten Frist aufzuerlegen.

Letztlich kann dieses System dazu führen, dass in den verschiedenen EASA-Mitgliedstaaten unterschiedliche alternative AMC`s gelten, was auch bei den betroffenen Organisationen und Piloten für Verwirrung und Rechtsunsicherheit sorgen dürfte.

Folgende Gestaltung des Rechtsinstituts der AMC`s würden wir daher für praktikabler und im Sinne einer Harmonisierung zielführender halten:

Die nationale zuständige Luftfahrtbehörde prüft die von der Organisation

vorgeschlagenen AMC`s auf ihre Sicherheitsrelevanz und übermittelt einen Entscheidungsvorschlag an die EASA. Diese prüft den Vorschlag anschließend und trifft dann eine Entscheidung über die Einführung eines neuen AMC. Erst wenn dieses veröffentlicht und damit allgemeinverbindlich ist, darf es von der Organisation (und allen anderen Organisationen in den Mitgliedstaaten) umgesetzt werden. Damit wäre einer drohenden Rechtsunsicherheit und Rechts-"Zersplitterung" vorgebeugt.

comment by: *Luftamt Nordbayern*

Die "Acceptable Means of Compliance (AMC)" sollen nach dem Willen der EASA ein flexibles Rechtssystem unter Wahrung der Chancengleichheit, Transparenz und Harmonisierung gewährleisten (Nr. 38). Ein Großteil der Entwürfe NPA No. 17a bis c, 22a bis c besteht daher aus AMCs. Sobald eine "Organisation", also z. B. eine Flugschule, einen begründeten Vorschlag macht, ein AMC, das Bestandteil der Genehmigung der Flugschule ist, zu ändern, da auch mit dem alternativen AMC die Sicherheitsanforderungen der Implementing Rules gewahrt seien, ist die zuständige Behörde verpflichtet, diesen Antrag zu prüfen. Diese Prüfung und Entscheidung hat nach AR.GEN.020 (c) binnen eines Monats nach Antragstellung zu erfolgen. Soweit die EASA nach Prüfung der "Alternative Means" zur Auffassung kommt, die Sicherheitsanforderungen der Implementing Rules seien nicht gewahrt, sind entsprechende Maßnahmen der zuständigen Behörde zu treffen.

Grundsätzlich halten wir es zwar für einen guten Ansatz, den von den Regelungen betroffenen Organisationen künftig verstärkt die Möglichkeit einzuräumen, Verbesserungsvorschläge und Anregungen einzubringen. Die AMCs sollten in der Tat künftig möglichst flexibel und mit wenig Zeitaufwand fortgeschrieben werden.

Problematisch ist aus unserer Sicht aber der Ansatz, dass die nationale Behörde über die Abweichung binnen eines Monats nach Antragstellung entscheiden soll (AR.GEN.020 (c)) und diese dann direkt angewendet wird. Dies führt dazu, dass die Abweichung bei positiver Entscheidung der nationalen Behörde sofort angewendet wird. Damit gelten in einzelnen Mitgliedsstaaten zunächst abweichende Regeln, ohne dass dies anhand der Rechtsvorschriften transparent für den Bürger erkennbar wäre. Entscheidet die EASA schließlich nachträglich, dass diese Abweichung nicht mit den Sicherheitsanforderungen der Implementing Rules vereinbar ist, so stellt sich das Problem wie die Personen zu behandeln sind, die zwischenzeitlich von der vorläufigen Ausnahme Gebrauch gemacht haben. Wenn die Abweichung ein Sicherheitsrisiko darstellt, so wäre es geboten nachträglich den Ausbildungsabschnitt entsprechend den Implementing Rules zu wiederholen. Andererseits besteht insoweit ein gewisser Vertrauensschutz der Betroffenen. Die Rücknahme der gewährten Ausnahmen mit ex tunc Wirkung dürfte erhebliche rechtliche Probleme in den Mitgliedstaaten aufwerfen und bei den betroffenen Luftfahrern zur erheblichem Unmut und Schadensersatzforderungen führen.

Letztlich wird dieses System auch dazu führen, dass in den verschiedenen EASA-Mitgliedstaaten immer wieder unterschiedliche alternative AMCs angewendet werden, was auch bei den betroffenen Organisationen und Piloten für Verwirrung und Rechtsunsicherheit sorgen dürfte. Das vorgesehene System (Gewährung einer Abweichung von den AMCs und nachträglicher Einholung der Entscheidung der EASA) sollte daher überdacht werden.

Folgende Gestaltung des Verfahrens zur Abweichung von den AMCs würden wir daher für praktikabler und im Sinne einer Harmonisierung von Rechtsvorschriften und der Einheitlichkeit der Rechtsordnung innerhalb der EU für geeigneter halten:

Die nationale zuständige Luftfahrtbehörde prüft die von der Organisation vorgeschlagenen AMCs auf ihre Sicherheitsrelevanz und übermittelt einen Entscheidungsvorschlag an die EASA. Diese prüft den Vorschlag anschließend zeitnah (z.B. innerhalb eines Monats) und trifft dann eine verbindliche Entscheidung über die Einführung eines neuen AMC. Erst wenn diese veröffentlicht und die AMC entsprechend aktualisiert sind, darf der Vorschlag inhaltlich umgesetzt werden. Damit wäre einer drohenden Rechtsunsicherheit und nicht transparenten unterschiedlichen vorläufigen Ausnahmen vorgebeugt. Dieses Vorgehen dürfte auch im Interesse der Betroffenen Piloten sein, die nicht Gefahr laufen Ausbildungsteile nachträglich wegen Nicht-Konformität mit den Sicherheitsanforderungen der Implementing Rules wiederholen zu müssen. Angesichts des Gewinns an Rechtssicherheit für die betroffenen Luftfahrer dürfte die hierdurch eintretende Verlängerung der Verfahrensdauer (z.B. maximal 4 Wochen bei der nationalen Behörde bis zur Vorlage bei der EASA und maximal weitere 4 Wochen bis zur Letztentscheidung der EASA) nicht erheblich ins Gewicht fallen.

Letztlich werden nur transparente Rechtsvorschriften und AMCs Akzeptanz bei den Luftfahrern finden. Es wäre einem Laien nicht vermittelbar, wenn neben den geschriebenen und veröffentlichten AMCs noch eine Reihe von zeitlich nicht nicht erkennbar befristeten und inhaltlich nicht nachvollziehbar schriftlich fixierten alternativen Verfahren existieren würde.

Comment on paragraph (b): change text as follows:

(b) Subject to ~~notification~~ **the approval** by the competent authority, as prescribed in AR.GEN.020(c), the organisation may implement these alternative means of compliance.

Justification:

As stated in AR.GEN.020, only when the approval from the authority has been received, the alternative AMC can be used. As it is written right now, it could be understood that only the notification would be required prior to implementation. In order to avoid misinterpretation to the rule, the term "approval" should be used instead of "notification".

**Page No:**

5 of 83

**Paragraph No:** OR.GEN.020 (a)**Comment:**

This part requires the presentation of "a safety assessment demonstrating that the safety objectives set out in the implementing rules are met." In respect of the ATO and FSTD at least, the implementing rules do not give a clear definition of what might be termed "safety objectives" in any specific case. Propose alternative text as below.

**Justification:**

The intent must be to show how any proposed new AMC complies with the implementing rules (e.g. by equivalence as defined in AMC to AR.GEN.020(c)) because compliance with the implementing rules in their entirety is mandatory. This is the only reference that can be found to Safety Objectives in Part OR and so can be seen as inconsistent terminology.

**Proposed Text (if applicable):**

Proposed text for OR.GEN.020 (a) (proposed amendments italic and underlined).

When an organisation wishes to use alternative means to establish compliance with the implementing rules other than those adopted by the Agency it shall, prior to implementing them, provide the competent authority with a full description of the alternative means of compliance, including any revisions to manuals or procedures that may be relevant, as well as a safety assessment *demonstrating how the proposed alternative means of compliance satisfy the implementing rules.*

Is there any guidance as to what the Safety Assessment should contain?  
Provide guidance as to how the Safety Assessment required in this section be prepared and presented

comment

613

comment by: *Air Berlin Technik*

Declaring AMCs binding is nothing else than giving EASA the right to create laws "through the backdoor", especially because the way for organisations to "suggest" alternative AMCs is by far too complex and bureaucratic (takes too long, without legal certainty in the meantime). An authority creating law is in contradiction with one of the basic principles of democracy: the separation of powers.

comment

614

comment by: *Air Berlin Technik*

The current concept of AMCs should be left as it is - informational only. It works well, while keeping the bureaucratic burden to a minimum. We do not see the need for declaring AMCs binding, nor are we convinced that this would constitute more legal certainty or ease in standardisation, because, after all, AMCs are - as the regulations/requirements - also only just LANGUAGE which can ALWAYS be interpreted differently (this does not even embrace problems resulting from individual translations from the AMC language English into member state language).  
So, in our opinion, the envisaged change of AMCs regarding their legal status (problematic enough) does not create any benefit, neither for authorities nor for organisations. Only a bureaucratic monster will be set up.

Based on the changes proposed in AR.GEN.020 the following changes are proposed in OR.GEN.020:

Proposal:

(a) When an organisation ~~wishes~~ **proposes** to use ~~alternative~~ means to establish compliance with the implementing rules other than those adopted by the Agency, it shall, ~~prior to implementing them~~, provide the competent authority with a full description of the ~~alternative~~ **proposed** means of compliance, including any revisions to manuals or procedures that may be relevant, as well as a safety assessment demonstrating that the safety objectives set out in the implementing rules are met.

(b) ~~Subject to notification by the competent authority, as prescribed in AR.GEN.020(c),~~ ~~the~~ organisation ~~may~~ **shall** not implement these alternative means of compliance

**before the notification by the competent authority, informing that the Agency has notified that it has been demonstrated that the safety objective set out in the implementing rules are met, has been received.**

comment

738

comment by: CAA-NL

Comment

The implementation of alternative means of compliance should not be subject to notification, but to acceptance.

Text proposal

"(b) Subject to acceptance the organisation may implement these alternative means of compliance."

comment

829

comment by: AEA

There should not be a requirement to publish AMCs by competent Authority (which could be a blocking point) since this might be used to delay publishing?

The proposed two step approval process involving first the Competent authority (CA) and thereafter EASA is completely unacceptable to AEA since it will become self-blocking.

In case EASA does not approve the alternative-AMC, it raises significant questions on who will pay for the damage. The organization - based on the CA approval - will already have invested a significant amount of money to implement the alternative AMC.

We therefore strongly believe "notification" of the alternative AMC to EASA should be sufficient

comment

1150

comment by: FNAM (*Fédération Nationale de l'Aviation Marchande*)**(a)****COMMENTS**

The aim of the BR is to enforce a certain level of safety (BR, Art. 2, Objectives).

The process for applying alternative AMC seems very subjective and complex. In no way, any of the proposed AMC states a comprehensive quantification or assessment of any level of safety.

**PROPOSAL**

We request the alternative AMC safety assessment process to be defined and documented in part-AR / OR, including ways of recourse.

An AMC to AR.GEN.020 "AMC", defining precisely the process to submit (for organizations), to assess (for Competent authorities) and to validate (for EASA), may be elaborated.

Guidelines shall be given to both parties to assess the required level of safety. A working group, consisted of NAAs and Professionals representatives may assist EASA in conducting this work.

**JUSTIFICATION**

Homogeneous treatment amongst the Member states, in order to obtain a level

playing field.

Complexity or subjectivity may not prevent organizations to use alternative AMCs

comment 1224 comment by: *Swiss International Airlines / Bruno Pfister*

There should not be a requirement to publish AMCs by competent Authority (which could be a blocking point) since this might be used to delay publishing. The proposed two step approval process involving first the Competent authority (CA) and thereafter EASA is against the Basic Regulation and other EU law, which requires a clear demarcation of responsibilities of central and national bodies. The two-step approval violates the principle of subsidiarity. On top, in case EASA would not approve the alternative-AMC, it raises significant questions on who will pay for the damage. The organization - based on the CA approval - will already have invested a significant amount of money to implement the alternative AMC.

We therefore strongly believe that, as a maximum, a "notification" of the alternative AMC to EASA is allowed to be required. Even better, we think that an ex post control of any member state national AMC approval process through the tool of Standardisation is anyway more appropriate, gives legal certainty to the applicant, and fully achieves the intended objective.

**Proposal:  
Eliminate the ex ante alternative-AMC review through EASA.**

comment by: *Ornulf LIEN*

*Comment:*

This OR.GEN introduces the term "safety assessment".

*Proposal:*

Replace "safety assessment" with "risk assessment" in this IR and in the corresponding AR.

*If that is not accepted, alternative proposal:*

Develop AMC/GM for development of a "safety assessment" and for analysing it for the Authorities.

*Justification:*

The only other instance of the term I have found in the regulation is in the associated AR.GEN. I have found no definition or guidance on "safety assessment". It is similarly mentioned in the RIA of 2.7 Performance based rule-making, but no further details are given there either.

ICAO SMM uses the term Safety assessment and gives guidance in Chapter 13. There it appears to be a top level process associated with change management within the operator, with only subtle differences from risk management.

My view is that it should be considered if "risk assessment" could be used instead to demonstrate that the safety objectives are met. This would have the benefit that it is used throughout the new regulation and some AMC/GM is already included in this NPA and in NPA 2009-02. If there should be a conscious intention of asking for something more (or less, or different) than what you could get from a risk assessment, that could be added in plain text in the IR. E.g. .., as well as a risk assessment demonstrating that ..... are met, and.... (if something else is required).

One example is OPS.COM.270 that asks for development of SOPs based on a risk assessment, and the Explanatory memorandum to PART-OPS item 83 seems to indicate that risk assessment is what is required here to justify an AMC.

comment

1711

comment by: *AEI*

**AEI propose a change in text to:**

**(b) Subject to the approval by the competent authority and the Agency, as prescribed in AR.GEN.020 (c), .....**

AEI refer to their response to NPA 2008-22b AR.GEN.020.

AEI believes that the potential advantages of EASA assessing and approving all AMC's will considerably enhance harmonization and uniformly improve standards. While not only maintaining EASA's "level playing field" for all member states, by being the final arbitrator in all applications. Agency control at the beginning of the process will prevent the prospect of having retrospectively prohibiting a NAA approved AMC which is allowed to be put into practice. Such incidents could lead to protracted and expensive legal

proceedings against EASA/ NAAs.

comment 1712 comment by: *NFO Technical Committee*

NFO believe the text should be ammended to include approval by the Agency.

**(b) Subject to approval by the competent authority and the Agency, as prescribed in AR.GEN.020 (c),**

Agency control of these approvals will equalize standards between member states and improve the standard of Flight Safety within EU.

comment 1941 comment by: *IACA International Air Carrier Association*

IACA has concerns with the proposed processing of alternate means of compliance for its complexity and inconsistency with the flexibility provisions of the Basic Regulation.

BR 216/2008 art.14 "Flexibility provisions" requires EASA to issue a recommendation within two months after notification of a Member State's intention granting an approval derogating from Implementing Rules. Within one month from EASA's recommendation the Commission shall notify its decision to all Member States. Hence the operator applying for another means to comply with the rules (= alternate Means of Compliance!) will have an answer within two months, while other EU operators will know within three months.

The OR.OPS.GEN.020 proposal feeding all alternative MoCs into the Rulemaking process for adoption as EASA AMC, will stall the RM Process due to the enormous associated level of effort. The lengthy RM process (3 months consultation + 3 months Comments Response Document + 2 months adoption = 8 months) does not provide stakeholders with legal certainty, since an operator may have to withdraw his alternate MoC eight months later, should the outcome of the RM Process be negative.

The proposal is also not consistent with the spirit of art.14 of the BR. How can EASA propose a process providing flexibility in deviating from AMCs (soft law) that is more complex than the BR flexibility deviating from IRs (hard law) ? Even if EASA proposes as "fast track" procedure, it will still remain complex and expert-intensive. A more efficient procedure may be a simplified RM process: EASA will publish the alternate MoCs only with and based on the "conformity checks" made by EASA within two months, i.e. the "recommendation" as required per art.14 of the BR.

Additional to the comments above, IACA airlines are increasingly concerned as to the "binding" nature of AMCs. From an applicant's point of view, in practice, there is little to no difference between IR and AMC. Without the too complex and bureaucratic process of an alternate means of compliance, AMCs are part of the approval process and therefore become binding. Both IR and AMC are therefore experienced as binding.

Implementing Rules do not always provide for a same level playing field as they may be interpreted different by Authorities, AMCs are often more detailed but not always the only way to provide safe operations. With all the knowledge available after ten years of JAR OPS and one year of EU OPS, EASA could have introduced AMCs with more options like JAR OPS had in the Fuel Policy. Operators would suffer less from the "bindingness" of the AMCs, while they would still provide for a level playing field. For the same reasons, several AMCs could be downgraded to GM.

comment 1972 comment by: *Arbeitsgemeinschaft Deutscher Verkehrsflughäfen e.V.*  
AMC or GM needed to specify how safety assessments need to be conducted

comment 2014 comment by: *Walter Gessky*

OR.GEN.020

Change the following:

(a) When an organisation ~~wishes~~ **proposes** to use ~~alternative~~ means to establish compliance with the implementing rules other than those adopted by

the Agency, it shall, ~~prior to implementing them,~~ provide the competent authority with a full description of the ~~alternative~~ **proposed** means of compliance, including any revisions to manuals or procedures that may be relevant, **and when appropriate** ~~as well as~~ a safety assessment demonstrating that the safety objectives set out in the implementing rules are met.

~~(b) Subject to notification by the competent authority, as prescribed in AR-GEN.020(c),~~ ~~The~~ organisation may implement these alternative means of compliance **when approved by the competent authority.**

Justification:

The concept of alternate MOC is not supported.

comment 2039

comment by: Avinor AS

The requirement to demonstrate that safety objectives set out in the Implementing Rules are met, opens up for a wide interpretation by the national authorities. There will therefore be a strong requirement to specify in AMC or GM the acceptable methodology as well as risk acceptance criteria.

comment 2053

comment by: ERA

ERA members understand that one of the important aims of the Basic Regulation is to enforce a certain level of safety (BR, Art. 2, Objectives). Therefore, it is of concern that it would appear that none of the proposed AMCs state a comprehensive quantification or assessment of any level of safety. ERA members recommend a comprehensive description of the expected level of safety set against the compliance with applicable AMCs.

A similar comment is applicable to Sec AR-GEN-020

ERA is concerned that the proposed processing of alternate means of compliance is complex and inconsistent with the flexibility provisions of the Basic Regulation that requires EASA to issue a recommendation within two months after notification of a Member State's intention granting an approval derogating from Implementing Rules.

Within one month from EASA's recommendation the Commission shall notify its decision to all Member States.

The operator applying for another means to comply with the rules will have an answer within two months.

Other EU operators will know within three months.

However, the OR.OPS.GEN.020 proposes feeding all alternative MoCs into the Rulemaking process for adoption as EASA AMC, and this will stall the RM Process due to the enormous associated level of effort.

The lengthy RM process (3 months consultation + 3 months Comments Response Document + 2 months adoption = 8 months) does not appear to provide stakeholders with legal certainty, since an operator may have to withdraw his alternate MoC eight months later, should the outcome of the RM Process be negative.

ERA members are concerned as to the "binding" nature of AMCs. From an applicant's point of view, in practice, there is little to no difference between IR and AMC. Without the too complex and bureaucratic process of an alternate means of compliance, AMCs are part of the approval process and therefore become binding.

With all the knowledge available after ten years of JAR OPS and one year of EU OPS, EASA could have introduced AMCs with more options like JAR OPS had in the Fuel Policy. Operators would suffer less from the "bindingness" of the AMCs, while they would still provide for a level playing field. For the same reasons, several AMCs could be downgraded to GM.

comment by: *FlightSafety International*

Publication of alternative AMC's might disclose proprietary issues and these should be covered under separate regulation.

For changes to procedures, organizations spent time and money to gain competitive advantages. These will not be made, and thus safety will not be advanced, without an option to keep these issues proprietary. This will inhibit investment into new technology and process improvement by negating competitive advantage.

EASA will be the Competent Authority for organizations outside the EU.

The process for this has not been defined. How will they assign second party responsibility? Who will arbitrate disagreement?

1. It seems that the current structure of two types of flight training entities (Registered Facilities, and Flight Training Organisations) is being replaced by one entity, the Approved Training Organisation. It would help if this was made clear, in the beginning of the document.
2. At the moment, it is clearly understood that a Registered Facility provides basic training (up to PPL, including night qualification), and an FTO provides advanced training. However, the ATO seems to have no equivalent structure. It is therefore unclear whether there will be effectively two types of ATO – one for basic training, and one for advanced. This seems a logical separation, and has worked satisfactorily for many years.

3. The title "Approved" training organisation suggests that criteria will be applied, to grant or deny the approval. What are the uniform criteria? Will it still be the case that ATOs who wish only to conduct basic (PPL) training, will not be inspected by the Authority, whereas the ATOs who conduct advanced training will be inspected? This is important to know, since PPL-only ATOs would be seriously disadvantaged if they now had to pay for Authority inspections.
4. It seems that the only categorisation within an ATO is to define "small organisations", as a separate entity. For the reasons stated above, it would be appropriate to split ATOs into "basic" and "advanced". The Authorities could then provide this information on their websites, making it far more efficient for prospective students to identify the group of ATOs that serve their particular needs.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 1 -  
OR.GEN.030 Changes to the organisation's approval**

p. 5

comment 55

comment by: *British Gliding Association*

The NAA's are becoming increasingly mindful of costs. For example, in the UK, the UK CAA charges a fee for ANY change to an approval. It would be helpful if this part identified that the notification is the important issue and that approval amendment or change can occur at a future date if necessary. This would permit, for example, a number of minor developments to be published as single change and associated single NAA fee.

Proposal. OR.GEN.030 a. '...enable the competent authority to determine continued compliance with this Part and to amend in due course if necessary the organisational approval certificate.'

comment 149

comment by: *Civil Aviation Authority of Norway*

Comment to (c); This may be very difficult to accomplish, as an ongoing operation can not be backdated. Additionally, a backdated revocation of an approval would lead to severe and expensive consequences for an organisation, as this would invalidate all work/service performed by that organisation, which again would create enormous consequences for a lot of third parties. As an example, an operator who has used an ATO for type ratings would be dramatically affected if the ATO's approval were revoked and all training and type ratings issued were invalidated because the ATO's approval was backdated.

The same applies to maintenance organisations, a backdated revocation or suspension would lead to a situation where a number of aircraft would have to be grounded, just because the maintenance organisation failed to notify the Authority of a change in their organisation.

We suggest the following; *Failure to inform the competent authority of such changes may result in suspension or revocation of the applicable approval certificate.*

comment 166

comment by: *DGAC FRANCE*

**Comment : OR.GEN.030**

1) OR.GEN.030 (a) The organisation is responsible for the continued compliance of the organisation to the applicable requirements.

2) OR.GEN.030 (b) : With the implementation of an operators's SMS, the operator is fully responsible for managing major changes affecting its organisation's approval. Therefore, the operator has to demonstrate to the authority that the changes do not affect its compliance with this Part and the applicable regulation.

3) OR.GEN.030 (c) deals with the authorities requirements. It is dealt in AR.GEN.345 et AR.GEN.350. In addition, it is not possible to backdate a certificate.

Modification :

**OR.GEN.030 Changes to the organisation's approval certificate**

(a) An ~~approved~~ **certified** organisation shall notify the competent authority of any proposed change to the organisation that affects the ~~approval~~ **certificate** before any such change takes place, in order to enable the competent authority ~~to determine continued compliance with this Part and to amend, if necessary, the organisation approval certificate.~~

~~(b) The competent authority may prescribe the conditions under which the organisation may operate during such changes, unless the competent authority determines that the organisation approval shall be suspended.~~

**(b) Before such changes take place, the organisation shall carry out a risk assessment and mitigation process.**

~~(c) Failure to inform the competent authority of such changes shall result in suspension or revocation of the organisation approval certificate backdated to the actual date of the changes.~~

Too strong rule.  
This will not be accepted in a court case.

comment 1151 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**Specific to maintenance industry**

« An approved organisation shall notify the competent authority of any proposed change to the organisation that affects the approval before any such change takes place, in order to enable the competent authority to determine continued compliance with this Part and to amend, if necessary, the organisation approval certificate. »

There is no processing time demand by competent authority. Some changes

can take place very quickly and ask for a strong reactivity in order to maintain operations. There is no way that treatment process from authority prevents organization from working efficiently otherwise it would cause financial non negligible effects.

« Failure to inform the competent authority of such changes shall result in suspension or revocation of the organisation approval certificate backdated to the actual date of the changes»

Organizations reorganize for various reasons depending on their will or not. Necessity to notify the competent authority before reorganization can lead to heavy financial consequences. Regulation CE 2042/2003 allows more flexibility : 145.A.85, Changes to the organization, « except that in the case of proposed changes in personnel not known to the management beforehand, these changes must be notified at the earliest opportunity».

### **OR.GEN.030 – Changes to Organisation Approval**

**Comment**

The requirement to notify the competent authority in advance of any changes takes no account of requirements of an immediate nature that could potentially affect flight safety. Operators need the flexibility to take immediate action in order to ensure the ongoing safety of the operation.

**Proposal**

(a) The approved organisation shall, *where possible in advance*, notify the competent authority of any proposed changes to the organisation....

(c) Failure to inform the competent authority of such changes *may* result in

.....

(d) Changes to the organisation's approval issued in response to an immediate safety requirement shall be notified to the competent authority within 24 hrs.

OR.GEN.035  
Time limited approvals gives the Authority more power to solve difficulties and to convince an organisation to follow the rules.

comment 168 comment by: DGAC FRANCE

**OR.GEN.035 (a)**

Comment :

OR.GEN.035 (a) makes an obligation for the authorities ; remove it to AR.GEN.310 (b)

**Validity of the certificate :**  
Although it can be very useful for a NAA to limit the duration of a certificate in order to put more pressure on a large operator, we do not oppose to an unlimited validity for organisations. However, it is important to balance this useful means of pressure with the harmonisation.  
But this should not apply to individuals whose certificate should be limited in time.

Modification :

**OR.GEN.035 Continued validity**  
~~(a) An organisation's approval shall be issued for an unlimited duration. It shall remain valid subject to the certificate not being surrendered, suspended or revoked.~~  
(b) Any person authorised by the competent authority shall be granted access, from the organisation, to any facility or document related to its activity, whether it is contracted or not.  
(c) Upon revocation, the certificate shall without delay be returned to the competent authority.

comment 182 comment by: DGAC FRANCE

**OR.GEN.035(a) and b)**

a) We support totally the approach of unlimited duration approval for organisations  
b) The access of the authority should be balanced with the necessary respect of private property

**a) ...provided that the intervals in AR.GEN.305 are changed**

**b) see with EASA legal advisors that it is not going to far to permit access without limits**

comment 213 comment by: ECA- European Cockpit Association

Comment:  
A provision for transfer of activity from one competent authority's scope to another (i.e. change of country) should be added.

Justification:

It is not specified whether an organisation has to re-apply fully in the case of a change in principal place of business, or if continued validity is applicable with some provision.

comment 258 comment by: ECA- European Cockpit Association

Delete, replace and add words:

OR.GEN.035 ~~Continued~~ validity

(a) An organisation's approval shall be issued for an ~~unlimited duration~~ **period of 3 ye ars rene wable**. It shall remain valid **until the expir ation date** subject to the certificate not being surrendered, suspended or revoked.

(b) Any person authorised by the competent authority shall be granted access, from the organisation, to any facility or document related to its activity, whether it is contracted or not.

(c) Upon revocation, the certificate shall without delay be returned to the competent authority.

JAR required maximum 3 years. The change is not justified

comment 273 comment by: Susana Nogueira

No unlimetd duration.

Time limited approvals gives authority more power to order the organization to follow rules

comment 316 comment by: UK CAA

**Page No:**

5

**Paragraph No:** OR.GEN.035

**Comment:** Comparison with Parts 21A.159, 145.A.90, and 147.A.155 reveals some disparities, notably that validity of the relevant organisation approvals is dependant on continued compliance with the relevant regulations. OR.GEN.035 does not have this clause.

**Justification:** Comparison with existing regulations to facilitate subsequent integration, unless a substantive change is intended in which case the reasoning behind it should be explained.

**Proposed Text (if applicable):** Consider rewording in similar format to Part 21A.159.

comment 317 comment by: UK CAA

**Page No:**

5

**Paragraph No:** OR.GEN.040

**Comment:** Given that this Part is titled Part Organisation Requirements the inclusion of requirements for "persons" seems out of place.

**Justification:** See earlier UK CAA comments. It is not clear which persons

this refers to nor how person is expected to know that a Part titled Part Organisations also covers "persons". This does not seem in keeping with Paragraph 43 of 2008-22a, which notes that Community legislative acts must be precise, leaving no uncertainty in the mind of the reader.

comment

Comment:

The operator has no say over the facility of a (sub)contractor.

Proposal: "*in case of contracting the operator shall arrange for access* ....." etc.

Note: see previous comment, we believe this paragraph does not match with the "continued validity" title

comment 974 comment by: Luftfahrt-Bundesamt

We do not agree with an AOC's unlimited duration. With regard to unclear penalty requirements and enforcement measures due to the AMC concept which appears to be in contradiction with German jurisdiction (please refer to our general comment and the comment on AR.GEN.020 and AR.GEN.350), a limited duration of an AOC seems to be the only effective way to enforce compliance with the implementing rules.

comment 984 comment by: Swedish Transport Agency, Civil Aviation Department  
(Transportstyrelsen, Luftfartsavdelningen)

**Comment for (b):**

We support the proposal in general but would like to add the right to inspect aircraft in this requirement. It is not correct to place this right to inspect an aircraft in an AMC (AMC.OR.GEN.035).

This requirement also suffers from the problem of understanding and defining the "appropriate competent authority". Does it refer to the competent authority of the Member State where the activities are performed, or only to the certifying competent authority?

**Proposal for (b):**

Add "aircraft" to the text.

Clarify which competent authorities shall be granted access to the company (and its aircraft).

**Proposal:**

"in case of contracting the operator *shall arrange* for access ..."

Note: see previous comment, we believe this sub-paragraph does not match with the paragraph title "continued validity"

comment 1499 comment by: *BMVBS (MoT Germany)*

We do not agree with the unlimited duration of an AOC as the standard case. Based on positive experience with AOCs of limited duration in Germany we strongly recommend to give the competent authority the possibility to decide whether a limited or unlimited duration of the AOC is appropriate.

There is no relation between the title of the Rule and the contents of Paragraph (b). Moreover, the organisation which contracts activities to a third party has no domestic authority over this party. Therefore, the terms of access for personal conducting oversight duties have to be rewritten.

Recommended amendment of the text:

**OR.GEN.035 Continued validity and oversight**

(a) An organisation's approval shall be issued at the decision of the competent

authority for a limited or an unlimited duration. It shall remain valid subject to the certificate not being surrendered, suspended or revoked.

(b) Any person authorised by the competent authority shall be granted access, from the organisation, to any facility or document related to its activity, ~~whether it is contracted or not.~~ In case of contracting the operator shall arrange for access.

The title of this article does not cover sub b (or vice versa).

comment 2340 comment by: FINNAIR

(b) Any person authorised by the competent authority shall be granted access, from the organisation, to any facility or document related to its activity, whether it is contracted or not.

Comment:

The operator's role in case of the facilities of a (sub)contractor should be reconsidered;

Proposal: "*in case of contracting the operator shall arrange for access .....*" etc.

Note: see previous comment, we believe this paragraph does not match with the "continued validity" title

comment 2373 comment by: Europe Air Sports PM

EAS concurs with and welcomes the proposal for an ATO approval to have continued validity.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 1 -  
OR.GEN.040 Declaration**

p. 5-6

comment 2 comment by: *CHC Europe EASA Ops Team - representing 550 pilots across Europe*

I cannot find the mentioned Appendix

Initials: DJ-CHC

comment 122 comment by: *DCA Malta*

**OR.GEN.040 (a)(1)**

There is no Appendix 1

comment 169 comment by: *DGAC FRANCE*

**Comment : OR.GEN.040**

Those informations are already defined in PART AR.

Requirements on persons should not be included in PART OR ; **that should apply only to organi sations.** This proves again that the structure is not appropriate or at least not mature enough

Modification :

**OR.GEN.040 Declaration**

(a) When required to declare its activity to the competent authority, ~~a person or~~ an organisation shall:

(1) provide the competent authority with the relevant information, ~~using the form established in Appendix I to this Part ;~~

(2) maintain compliance with the applicable requirements and with the information given in the declaration;

(3) grant access to the competent authority to determine continued compliance with the applicable requirements;

(4) notify the competent authority of any changes affecting its activity and its declaration through submission of an amended declaration.

(b) The organisation ~~or person~~ shall notify the competent authority when it ceases all operations.

comment 183 comment by: *DGAC FRANCE*

**OR.GEN.040**

The scope of this provision is not clear

It should be stated clearly that a person or organisation is required to declare its activity on the basis of a EU regulation

1) Add when required to declare its activity **by another a pro vision of the European community regulation**

2) Sum up for information in one document all the activities which are required

to declaration : GMP, non commercial activity with complex aircraft”

- comment 214 comment by: *ECA- European Cockpit Association*  
 Comment:  
 A provision for transfer of activity from one competent authority's scope to another (i.e. change of country) should be added.  
 Justification:  
 It is not specified whether an organisation has to re-apply fully in the case of a change in principal place of business, or if continued validity is applicable with some provision.
- comment 274 comment by: *Susana Nogueira*  
 (a)(1) Appendix 1 is missing
- comment 276 comment by: *Susana Nogueira*  
 (b) Section 2 (management) is applicable to the persons?
- comment 319 comment by: *UK CAA*  
**Page No:**  
 6 of 83  
**Paragraph No:** OR.GEN.040(a)(1)  
**Comment:** Refers to Appendix 1 to Part OR. The appendix is missing from the document.

- comment 835 comment by: *AEA*  
**Relevant text:** (a) When required to declare its activity to the competent authority, a person or an organisation shall:.....  
**Comment:** This sub (a) is vague. Under which circumstances does an operator have to declare? Is this up to the CA? Please specify. In our opinion commercial operators should not be subject to declaration when operating non revenue flights.
- comment 985 comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

This section does not seem to have corresponding requirements in Part-MED or Part-AR, at least not for persons. As this section also covers persons and not only organisations it should be moved to a more general regulation, or be duplicated in each Part (FCL, MED, OPS, etc.).

Point (1) refers to a form established in Appendix I to this Part. We believe that forms should normally not be included in the requirements.

**Proposal:**

1. Duplicate requirements in relevant parts/subparts to make them applicable to persons.
2. Delete the proposed Appendix 1 as we see no need for developing the form mentioned in the text. The information required in a declaration should be specified in the relevant paragraph.

**Comment for (a) (3):**

As regards granting access, the paragraph lacks precision. It does not specify the organisation site, aircraft, facilities etc.

**Proposal for (a) (3):**

Add "aircraft, organisation site" to the text.

comment

1026

comment by: *Fédération Française Aéronautique*

FFA recommends removing this rule from this subpart GEN and inserting it in a new dedicated subpart because it is misleading, at least for ATOs to which this rule shall not apply. All ATOs are required to be approved in compliance with the Essential Requirements.

It is clear that some organisations shall not need an approval but shall have merely to declare their activity. So, the rule is of interest, but it shall not concern the whole organisations.

To a certain extent, this shows the limitation of the GERT structure, since this rule shall not apply to all "organisations/readers".

Additional complexity will come up with the introduction of rules related to airworthiness, to operations, to aerodromes, to ATM/ANS, reducing the initial advantages of the proposed structure.

comment

1027

comment by: *Fédération Française Aéronautique*

Should an organisation be defined in OR GEN 010 as proposed above, FFA suggests deleting the words "a person" all along this rule.

p. 6

comment

170

comment by: DGAC FRANCE

**OR.GEN.045 (a) et (b)** should be removed to AR GEN.345 Findings and corrective actions – organisations (a) because it obliges the authority to take into account this classification for the findings

comment

211

comment by: ECA- European Cockpit Association

An AMC about corrective action periods for Level 1 and Level 2 findings is missing.  
See Part 147.B.130 and AMC 147.B.130(b) Findings  
Are these the only level 1 findings?  
Request the use of the proposed AMCs.

comment 212 comment by: ECA- European Cockpit Association

Comment on paragraphe (b): change text as follows:

(b) A level 2 finding is any non-compliance with the applicable requirements of the Basic Regulation and its implementing rules, with the organisation's procedures and manuals or the terms of an approval or certificate **which could lower the safety standards or possibly hazard flight safety.**

Justification:

EASA regulation is a safety regulation. Non-compliance with any of the BR or IR must be understood as lowering the safety standards (that is why the requirements are there for, to defend safety in any way; otherwise they wouldn't exist). EASA cannot leave its own responsibility of the interpretation of any infringement affecting safety or not to any other body.

comment 275 comment by: Susana Nogueira

(a) Delete paragraphs (1) and (2).

Are only examples.

comment 320 comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045(a)

**Comment:** Query use of "hazards flight safety".

**Justification:** Hazard has a particular meaning in Safety Management Systems, which is generally something that has the potential to cause harm. Its use here is inappropriate.

**Proposed Text (if applic able):** "which decreases safety standards and adversely affects flight safety".

comment 321 comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045(a)

**Comment:** It is unclear whether more examples of level 1 findings should have been included.

**Justification:** There is an "or" after (2).

comment 322 comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045

**Comment:** The Agency should include the ability for competent authorities to make recommendations to operators for items that do not justify a Level 2 finding. These recommendations should be cross-referred to in AR.GEN.345(b). Reference to recommendations is already made in AMC2 to AR.GEN.305.

**Justification:** To limit reports solely to adverse findings does not always facilitate the sharing of information in what is a good, recordable format. For example, an aerodrome may carry out the prescribed minimum number of runway inspections but this proves not to be sufficient for its level of operation; recommendations by the competent authority would provide safety good advice for the regulatee.

comment

323

comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045(a)(1)

**Comment:** The need for two written requests for access to have been refused before raising a level 1 finding does not align with Part 21 (one written request).

**Justification:** Refusal of access should be treated as a significant issue, two refusals of written requests is overly generous. Additionally comparison with existing regulations to facilitate subsequent integration.

**Proposed Text (if applicable):** ...operating hours after one written request.....

comment

324

comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045(b)

**Comment:** "hazards flight safety".

**Justification:** Hazard has a particular meaning in Safety Management Systems which is generally something that has the potential to cause harm. Its use here is inappropriate.

**Proposed Text (if applicable):** "which decreases safety standards and adversely affects flight safety".

comment

325

comment by: UK CAA

**Page No:**

6

**Paragraph No:** OR.GEN.045(b)

**Comment:** The definition of a level two finding is overly complex. Consider

similar wording to Part 21. Current NPA definition is dependant on "lowering safety standards" etc, surely non-compliance with the regulation is sufficient without any further caveats?

**Justification:** Clear statement that any non-compliance with the regulations results in a finding.

**Proposed Text (if applicable):** A level 2 finding is any non-compliance with the applicable requirements of the basic regulation or its implementing rules, not classified as a level 1 finding.

comment 368 comment by: *Aero-Club of Switzerland*

Question before commenting: What happens if a country does not accept the newest edition of the Basic Regulation as this is the case with Switzerland with 216/2008?

comment 388 comment by: *Civil Aviation Authority of Norway*

Comment to (a);  
These two conditions can not be considered as a serious hazard the flight safety, as this only affects the administrative condition of the organization. A lack of a nominated person itself does not necessary constitute a flight safety hazard.

comment 389 comment by: *Civil Aviation Authority of Norway*

Comment to (b);  
The definition of a level 2 finding is identical to a level 1 finding, except for the word "significant" used in the level 1 definition. This may be interpreted differently by member states, and some guidelines should be provided.

comment 425 comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*

Comments:

The lack of an ACM or nominated PH shall lead to a level 1 finding.

This paragraph is formulated much too incisive. This paragraph shall be formulated much more liberal.

Proposals:

The operator must have a competent person replacing the missing postholder until a new PH can be nominated.

An operator shall not be punished with a level 1 finding if one of the management staff leaves the company without prior announcement (or by accident).

comment 429 comment by: *FlightSafety International*

**Comment**

The word "or" at the end of the sentence implies the following section (b) is also a Level 1 finding

**Proposal**

Delete the word "or" at the end of (a)(2)

**Impact to FlightSafety**

Inclusion of the word "or" implies that Level 2 findings are also Level 1 findings, thus causing confusion to the reader. The elimination of the word "or" clarifies the categorization of findings much more clearly

comment 600

comment by: *Heliswiss AG, Belp*

OR.GEN.045 (a) (2)

Due to the increasing number of regulations, training and experience requirements, it is becoming ever harder to find qualified personnel. If e.g. the resignation of a postholder is a Level 1 finding, an organisation is pressured not to take the best applicant for the job but the first one. Furthermore, it should be possible to find transitional arrangement until another qualified person can be nominated.

"(2) the lack of an accountable manager or nominated persons" should be moved to a level 2 finding

comment 1153 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**See also comments AR.GEN.345**

---

Comments

"Level 1 findings" and "level 2 findings" are defined in OR.GEN.045 and not in Part AR.

Proposal

We suggest a specific part of the EASA regulation framework may contain a comprehensive and exhaustive list of definitions, applicable to the whole EASA regulation, which is the best way to have consistent and non-redundant definitions.

Justification

Non-consistent, redundant or with a limited-applicability field definitions, might be a legal issue.

It might be a source of misunderstanding and cause problems of reading.

It does not comply with the objective of the Agency not to repeat the same things in different articles.

Please also note "level 1 findings" and "level 2 findings" are (at this stage) repeated in OR.GEN.045 and part-145 ( Regulation (EC) N° 2042/2003, Annex II/ Part 145, Findings 145.A.95, page 58)

\*\*\*

**COMMENTS**

We understand of the wording of AR.GEN.345 (a) that any other findings than explicitly specified in (a)(1) or/and (a)(2) **and** not lowering the safety standards according to (a) shall not be considered as level 1 findings.

**PROPOSAL**

If our understanding is correct, please clarify sentence in (a):

"The following **and only the following** shall be **additionnaly** considered as level 1 findings".

**JUSTIFICATION**

Clarity and understanding.

comment 1174 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

### **COMMENTS**

To a global extend, **planned** audits, surveys, inspections shall be noticed by the Competent authority to an organization with a 'sufficient' delay.

### **PROPOSAL**

A minimum thoughtfulness delay shall be precised for Competent authorities to notify **planned** audits, surveys, inspections to an organization  
Such a delay shall be of 4 weeks.

### **JUSTIFICATION**

This would be consistent with the 4-week delays and other similar delays stated elsewhere in part-OR (for instance AMC OR.GEN.030/035/040).

\*\*\*

### **COMMENTS**

A response delay for organizations shall be notified in this article.

\*\*\*

### **Specific to maintenance industry**

« After receipt of notification of findings, the organisation shall define a corrective action plan and demonstrate corrective action implementation to the satisfaction of the competent authority within a period agreed with that authority. »

There is not uniformly defined response period (which is the case in current legislation) . This allow more flexibility but for a same finding found in two different states, the entry into progress period of the corrective action may be different, so favoring one of the organizations. We regret that there is no harmonization preventing a favoritism of states towards their organizations.

\*\*\*\*\*

comment 1314 comment by: *Ryanair*  
**OR.GEN.045 – Findings**  
**Comment**

The references appear to relate to a competent authority's oversight (AR) rather than Organisation Requirements (OR)

The current wording allows for an individuals' non-compliance, rather than a company non-compliance, being raised as a level 1 finding.

**Proposal**

(a) A level 1 finding is any *approved organisation's* significant non-compliance with the applicable requirements of the Basic Regulation and its implementing rules or the terms of an approval or certificate which lowers the safety standards and seriously hazards flight safety.

(a)(2) Remove second 'OR'(typo?)

(b) A level 2 finding is any *approved organisation's* non-compliance with the applicable requirements of the Basic Regulation and its implementing rules or the terms of an approval or certificate which could lower the safety standards or possibly hazards flight safety.

comment 2412 comment by: *FlightSafety International*

Repetitive nature is not specified. Is this defined by the Member State or EASA? What is the time frame for a decision under this rule? Since a Member State only can issue an Article 14 (4) Exemption, for ATOs outside a member state whose competent authority is EASA, how can there be a level playing field?

Requests from ATOs and airlines are often time critical, so a maximum time frame should be established.

Premise for the rule-making process is a level playing field however this puts non European based ATOs at a distinct disadvantage.

comment 2455 comment by: *Iberworld Airlines*

About NPA 2008-22C OR.GEN.045 FINDINGS, OR.GEN.200 and AMC OR.GEN.200, several inconsistencies are found:

1. "Finding" and "non-compliances" are the words used in OR.GEN.045 but in the corresponding AMC other words are used "deviation report" and "management evaluation report" that are not defined previously. Would be much better to use defined words ("finding report", etc.)

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 2**

p. 7

comment 156

comment by: DGAC FRANCE

**Comment to OR.GEN 200 to 220**

All requirements of AR.GEN.200, AR.GEN.205 and AR.GEN.220 are complied with under ISO continued certification. Additional requirements by EASA would require additional work and resources for both the authority and the Agency without any additional value.

**Add an AMC to AR.GEN.200 - ISO Certification**

**ISO successful initial and renewal certification of the competent authority is an equivalent to paragraph AR.GEN.200, AR.GEN.205 and AR.GEN.220.**

comment 289

comment by: Susana Nogueira

This section is a mix of JAR-FCL requirements for FTOs and TRTOs. This text must be reviewed completely.  
Rule is too binding.  
Some parts might be better placed in AMC

comment 1030

comment by: Fédération Française Aéronautique

FFA highlights that the essential requirements call for a safety management system and a quality management system. Besides, the Agency proposes to set them up under proportionate rules (see NPA 2009-22a page 62 "Executive summary").

FFA fully supports this important principle.

So, FFA proposes to change the title of this section into "Safety and Quality management".

comment 2031

comment by: EPFU is the European Union of national powered flying organisation from the 10 main European countries

**EPFU** believes that this section is particularly not adapted to non commercial, non profit small organisation as aero-clubs and associations. Implementation of this section will add unnecessary and unrealistic burden to those small organisations.

So EPFU thinks that Section 2 requirements must apply to "other/large organisation" only.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 2 -**

p. 7

<b>OR.GEN.200 Management system</b>
-------------------------------------

comment 65 comment by: *British Gliding Association*

Gliding training in member states currently takes place under the oversight of gliding federations. Almost without exception, the training is non-commercial and not for profit in nature and delivered by volunteers. The gliding federations have in place management systems that provide adequate quality and safety management. All deliver the training 'product' through the clubs. Clearly EASA FCL requires a standardised approach. but standardisation should not be used as a tool to add bureaucratic and economic burden on gliding and its participants. The BGA welcomes the comment at OR.GEN.200 (b), but notes that in fact the detail within NPA 22 does not appear to consider the 'nature and complexity' of gliding.

Most of the following comments reflect on this important point.

comment 93 comment by: *Keven BAINES - MD Baines Simmons Limited*

Para. (a) (5) this suggests that hazards are reactive, in that the organisation has experienced an occurrence. The very essence of Safety Management is that we identify potential hazards by proactive means, this could be by a 'near-miss' reoport (i.e. something that has been identified as a result of a human error that had not resulted in an occurrence, but is left unaddressed might. the aim of taking corrective action in such a case is to minimise the likelihood of or simply to reduce the risk of occurrence. Suggest a that this be amended accordingly. We feel that the essence of SMS is to capture hazards in a proactive or even predictive manner.

**FAA presentation to EC AST (March 12, 2009): SMS International Collaboration & Industry Outreach Program**

**NPA 2008-22(a): 2.3.3.2 Non consistent rules for AR**

Comment :

**OR.GEN 200 Management system**

The name « Management System » can be understood as the management system of the whole organisation (including financial, industrial strategy, human resources, etc.)

There is a risk that the Safety and Compliance Monitoring functions will not be independent from the Accountable Manager.

The functions Safety Management and the function Compliance Monitoring System are not clearly stated, nor is their relationship.

There is a risk that function of Safety Management would be reduced to a Compliance Monitoring exercise.

The paragraph and its AMC are not consistent with ICAO framework and

guidance for SMS. The ICAO framework is based on 4 principles: Safety policy and objectives, Safety risk management, Safety assurance, Safety promotion. Other operators (ATM and Airports) who will be under the Agency scope have already implemented and certified SMS according to those ICAO principles.

The new scheme proposed by the Agency would be detrimental and a burden for operators that have already started to implement a SMS based on ICAO requirements. A lot of guidance and training courses have already been published and offered (including ICAO; ESSI / ECAST, FAA, Eurocontrol) that refer to those principles. The Agency has not provided any argument to justify divergence from the rest of the world's best practices.

The FAA through FAA/TCCA/EASA "SMS collaboration working group" has informed that one agreement was that "Use ICAO framework as the foundation; deviations need to be thoroughly explored, documented, and explained". EASA should be mindful of those international collaboration issues.

This paragraph is not consistent with the AMC OR.GEN.200.

This paragraph concerns other systems than the safety management system. This paragraph appears to cover quality management system but does not say so explicitly.

The concept of merging Quality management and Safety Management is based on the history of airlines reporting systems, quality systems and safety management systems. This is not consistent with other domain state of the art. For aerodromes, the reporting culture is not developed and there is no regulated quality system. For ATM, there is a strong reporting culture and maturing SMS but no regulated quality systems. For Maintenance organisation, the reporting culture (on operational events, not technical issue) is being developed through recent part 145 human factors requirements.

Therefore the proposal runs the risk of difficult and varying implementation issues for the various mentioned domains when the Agency is fully responsible for those. The expected harmonised result is highly improbable under those circumstances.

In addition it is impossible to assess the impact of IR OR and AR for aerodromes and ATM without the corresponding IR.

For all these reasons, it is strongly recommended to adhere as much as possible to ICAO requirements.

MODIFY Paragraph **OR.GEN 200**: Title **Management OF SAFETY**

The title of OR GEN 200 shall be changed as : "management of Safety"

a) An organisation shall

OR.GEN.200 Management system

(a) An organisation shall ~~establish and maintain a management system that includes:~~ be managed, taking into account safety at the highest level.

In order to do so, it shall manage safety by implementing the functions of SMS as defined by ICAO and a function to monitor compliance with the relevant safety requirements.

~~(1) a safety policy;~~

~~(2) a process for identifying safety hazards and for evaluating and managing the~~

~~associated risks;~~

~~(3) clearly defined lines of safety accountability throughout the organisation, including a direct accountability for safety on the part of senior management;~~

~~(4) personnel trained and competent to perform their tasks;~~

~~(5) a process for reporting and analysing hazards, incidents and accidents and for taking corrective actions to prevent their recurrence;~~  
~~(6) an organisation manual containing all management system processes, including a process for making personnel aware of their responsibilities and an amendment procedure;~~

**1. Safety policy and objectives**

**1.1 – Safety policy**

**1.2 – Management commitment and safety accountabilities**

**1.3 – Appointment of key safety personnel**

**1.4 – Coordination of emergency response planning**

**1.5 – SMS documentation**

**2. Safety risk management**

**2.1 – Hazard identification**

**2.2 – Safety risk assessment and mitigation**

**3. Safety assurance**

**3.1 – Safety performance monitoring and measurement**

**3.2 – The management of change**

**3.3 – Continuous improvement of the SMS**

**4. Safety promotion**

**4.1 – Training and education**

**4.2 – Safety communication**

~~(7 5) a function to monitor compliance of the management system **organisation** with the relevant **safety** requirements and adequacy of the procedures. Compliance monitoring shall include a feedback system of findings to the accountable manager to ensure corrective action as necessary; and~~

~~(8 6) any additional requirements that are prescribed in this Part.~~

~~b) The **management of safety** ...(keep the rest of the paragraph )~~

comment by: DGAC FRANCE

**Additional comment to support ou proposal in comment n°154  
 OR.GEN.200 Management system (a)(5) a process for reporting...**

Ref. EU-OPS 1.037

**Regulation 2003/42/CE (June 2003)**

Reporting and analysing accidents TO PREVENT THEIR RECURRENCE is consistent with the "accident and serious incident investigation" process. However analysing hazards, incidents TO PREVENT THEIR RECURRENCE is against all known principles for incident analysis. The objective of incident and operational events analysis is not to prevent the reoccurrence of the same event. The objective is to understand the circumstances, functioning of safety barriers and improve their efficiency to ensure safety. This is done on a large scale level (large number of event investigated). Additionally preventing occurrence of DANGERS is a totally unrealistic requirement since dangers are an inherent part of any high risk industry such as aviation. Both processes are necessary and complementary. This paragraph is unclear and misleading.

**See general comment on OR.GEN 200 for proposed modifications**

comment

171

comment by: DGAC FRANCE

**OR.GEN.200(a)**  
**OR.GEN.200.(a)(3)**  
**OR.GEN.210(b)**  
**NPA 2008-22(a) – article 39**  
**NPA 2008-22(a) – 2.3.1**

There is a nominated manager to verify compliance in OR.GEN.210(b) and AMC 1 to OR.GEN.200(a)(7).

However the nomination of the Safety Manager mentioned in AMC 2 to OR.GEN.200(a)(3) is nowhere mentioned.

The safety manager has a compliance monitoring function (AMC2 OR.GEN.200.A.3).

The function of safety manager and responsible for the compliance monitoring programme is not defined at OR level.

Those functions are vague in the AMC (AMC OR.GEN.200 (a)(3) and AMC OR.GEN.200 (a)(7).

It follows that there is a discrepancy in the nomination process between the safety manager (in AMC) and the other managers (in the rule).

It also follows that there is confusion between the role of the manager of the compliance monitoring system and that of the safety manager who both have compliance monitoring functions.

Additionally there is no reference to a manager responsible for the "Management System".

comment by: DGAC FRANCE

**Additional comments to OR GEN 200**

1. We support strongly the idea in OR GEN 200 b) that the management of safety shall be adapted to the size, nature and complexity of the activities.

Nevertheless, we consider that the criteria of 20 persons (proposed by EASA in AMC) is arbitrary, not adapted and should be more flexible. The AMC is too prescriptive. The SMS should be flexible and adapted to the size, nature and complexity of the activity. However there are only 2 options: small and other organisations. The requirements for "other" organisations cover a wide variety of operators that do not have the same resources. The cost to industry is largely underestimated in the RIA

We consider that the main criterias to define a small organisation should be defined in the Implementation rules and not in AMC for it is very important to have the same level of standards in the EU.

2. Thus, for small structures, a progressive enter into force should be organised in the transitional measures. An entry into force in one time is too burdensome for small organisations

**Develop transitional measures which could be based on the following scheme (e.g) :**

**1er year :**

**An organisation shall establish Safety policy, Management commitment and safety accountabilities, Appointment of key safety personnel**

**Second year :**

**An organisation shall establish Coordination of emergency response planning, SMS documentation (Safety risk management, Hazard identification ...)**

comment 188

comment by: DGAC FRANCE

**AMC1 to OR.GEN.200 200 (a) (2)**

The AMC requires operators to develop hazard identification, risk analysis and mitigation processes "in a simplified manner". There are no guidance or acceptance criteria to guide those operators on what is acceptable. "simplified manner" is not a regulatory concept. This will lead to non uniform implementation throughout Europe and between operators. This is a safety risk.

The Agency should develop guidance for small operators in the form of GM. The deliverables of ESSI / ECAST / SMS – Safety culture working group does not address small operators hazard identification, risk analysis and mitigation processes and does not contain operational examples which might help small operators comply with the requirement.

This is also an issue for the competent authority since no criteria exists to support oversight.

**Add GM to OR.GEN.200.  
Develop GM for small operators.**

comment 190

comment by: DGAC FRANCE

**AMC to OR.GEN.200 (a) (5)**

This AMC is not clear regarding EU Directive 2003/42

There is no reference to applicable European regulation for incidents reporting systems.

The scope of the scheme is not clear as §2. mentions "relevant" incidents/accidents, §3. gives a definition that reads "occasions where routine procedures have failed", and §4. talks about "occurrences". Does the scheme also cover confidential reporting systems?

**Develop transitional measures**

comment 215

comment by: ECA- European Cockpit Association

A reference to confidentiality of reporting information, Flight Data Monitoring, etc. should be added.

comment 259

comment by: ECA- European Cockpit Association

Add new paragraph:

**(8) The compliance monitoring system shall include procedures designed to verify that all operations are being conducted in accordance with all applicable requirements, standards and procedures.**

(89) any additional requirements that are prescribed in this Part.

**Justification:** Clarity  
**Proposed Text (if applicable):** Additional text: 'An organisation, except as specified in OR.AeMC.200, shall establish...'

comment 327 comment by: *UK CAA*  
**Page No:**  
7  
**Paragraph No:** OR.GEN.200 (a)  
**Comment:** Paragraphs (a) 1 to 5 and their corresponding AMCs do not align with the ICAO framework and its four principal headings in ICAO DOC 9859:  
Safety Policy and Objectives  
Safety Risk Management  
Safety Assurance  
Safety Communication  
Though the content of the rule and the AMC appears to reflect the ICAO content, by reinventing and changing headings this is likely to cause confusion.  
**Justification:** This may cause confusion in terminology and make demonstrating compliance with ICAO requirements difficult. This will also create difficulties for those organisations that have already developed SMS against the ICAO requirements laid out in ICAO Doc 9859 especially for Aerodromes and Air Navigation Providers.  
**Proposed Text (if applicable):** The rule and the corresponding AMC should be laid out in line with the ICAO Framework as detailed below.  

1. Safety policy and objectives
  - 1.1 – Management commitment and responsibility
  - 1.2 – Safety accountabilities

comment by: *Heliswiss AG, Belp*

The Organisational Management should not only include the SMS but all the organisational requirements that are scattered over the OPS Manual of the commercial flight ops, the Training Manual and the Operations Manual of the ATO, the CAME and the Maintenance Operations Manual. For an organisation working with all parts, this is a nightmare. All the organisational procedures of the company should be described in the Organisational Manual and the according Manuals should be relieved of these parts. This would give a clear picture of how the company really works and who has which function in the company.

Proposition:

3. The SMS and the organisational Parts of Training Manual, Operations Manuals, Maintenance Operations Manual and CAME may be included in the Organisation Manual.

Text proposal

(8) any additional requirements that are prescribed in this Part and other applicable parts.

comment

780

comment by: *European HF Advisory Group***Page No: 7****Paragraph No: OR.GEN.200 (a)**

Comment: Paragraphs (a) 1 to 5 and their corresponding AMCs do not align with the ICAO framework and its four principal headings in ICAO DOC 9859:

Safety Policy and Objectives

Safety Risk Management

Safety Assurance

Safety Communication

Though the content of the rule and the AMC appears to reflect the ICAO content, by reinventing and changing headings this is likely to cause confusion.

**Justification:** This may cause confusion in terminology and make demonstrating compliance with ICAO requirements difficult. This will also create difficulties for those organisations that have already developed SMS against the ICAO requirements laid out in ICAO Doc 9859

**Proposed Text (if applicable):** The rule and the corresponding AMC should be laid out in line with the ICAO Framework as detailed below.

1. Safety policy and objectives
  - 1.1 – Management commitment and responsibility
  - 1.2 – Safety accountabilities
  - 1.3 – Appointment of key safety personnel
  - 1.4 – Coordination of emergency response planning
  - 1.5 – SMS documentation
2. Safety risk management
  - 2.1 – Hazard identification
  - 2.2 – Safety risk assessment and mitigation
3. Safety assurance
  - 3.1 – Safety performance monitoring and measurement
  - 3.2 – The management of change
  - 3.3 – Continuous improvement of the SMS
4. Safety promotion
  - 4.1 – Training and education
  - 4.2 – Safety communication

(v) Balloon training often takes place in the student's own balloon or a balloon borrowed for the purpose. It would be excessive to inform the Authority every time a different balloon was used for a training flight.

Can we simply say any airworthy balloon for balloon training?

comment

789

comment by: *David COURT*

There needs to be a clear distinction between training for private flying carried out by volunteers for no fee or a nominal fee in non commercial training organisations and commercial training by large commercial organisations.

Item a is contradicted by item b.

If the systems are to be proportional for small volunteer/non commercial training organisations who train only for LPL, PPL, BPL and SPL then there should not be a requirement for:

"clearly defined lines of safety accountability throughout the organisation"  
 "a process for reporting and analysing hazards, incidents and accidents"  
 "manual containing all management processes and a process for making personnel aware"  
 "monitor compliance with the management system"  
 "feedback system of findings"

Pilots often volunteer to give training without charge for the sheer joy of seeing a student progress to become a competent, safe pilot.

They will not volunteer to fill in a huge paperwork trail to prove they are doing what they are already doing. All these procedures will add to the cost of training.

They will also cause a reduction in the number of Instructors and students.

Training Organisations will need to recruit administration staff to deal with all these procedures. Less Instructors + more Administrators = less training + more costs.

However proportional the rules are made, the fact they are to be audited by NAAs will ensure they are not proportional. It will depend on how pedantic each NAA wishes to be.

We cannot rely on all NAAs to apply a "light touch" to the rules as they are written here. Light rules must be written by EASA so that different NAAs do not interpret them differently. We were promised a level playing field. We do not want to go shopping round Europe for the lightest touch NAA to operate our ATO under.

It is not satisfactory to list complicated procedures and then qualify them by saying apply these proportionally according to the complexity of the operation.

The rulemakers should write proportional rules not leave them for others to interpret.

A proportional management system for non commercial training organisations would be:

- 1 A Safety Policy
- 2 A process for identifying hazards and managing the risks
- 3 One person accountable for safety
- 4 Personnel trained and competent to perform their tasks
- 5 A record of hazards, incidents and accidents
- 6 A method of informing staff and students about hazards, incidents and accidents.
- 7 On organisational diagram
- 8 A list of responsibilities.

OR.GEN.200 Management system

**(a) An organisation shall establish and maintain a management system that includes:**

**(1) .....**

.....

**(5) a process for reporting and analysing hazards, incidents and accidents and for taking corrective actions to prevent their recurrence;**

**(6) an organisation manual containing**

**Comment**

comment 840

comment by: AEA

**Comment:** note that the organizational manual might be divided into the different activities (e.g. CAT, MRO, ATO) of the organization

comment 841

comment by: Frank Schweppe

Like so often in this EASA exercise, it is assumed that any form of instruction or operation will be in the form of an 'organisation'. I am concerned with ballooning, which is an activity which is usually conducted by individuals, not organisations with multiple personnel. That also goes for instruction: usually there is just the instructor, giving instruction part-time or even infrequently, to one or a few students (usually one at a time). Usually there are no formal office premises; the instruction room for theory will be just a room at the instructor's home or a table in a local restaurant (best case: a small rented conference room). So 'senior management' and 'personnel' will more often than not be the same single person, and thus 'lines of responsibility' become non-existent. All responsibility lies with that same single person.

It would seem useful to allow single-person training 'organisations' to have very limited procedural paperwork, as obviously there is not really any need for 'management' to explain to 'personnel' how to go about their work, if those are one and the same person.

comment 848

comment by: NATS

(a)(3) This appears to imply that safety accountabilities exist for "senior management" whereas the AMC 2 to OR.GEN.200(a)(3) implies only the "accountable manager" has safety accountabilities and key personnel have safety responsibilities. Thus there is a potential contradiction in the intent of the IR and associated AMC.

(a)(4) This does not read correctly "An organisation shall establish and maintain a management system that includes personnel trained and competent to perform their tasks." Personnel are entities and cannot be part of a management system; rather the requirements for their use can be defined by the management system (i.e. trained and competent). Thus there is a potential contradiction in the intent of the IR and associated AMC.

(a)(4) This is a very broad scope and could be interpreted as including those in an organisation that are not involved directly in the service delivery (i.e. safety significant) as their tasks (e.g. finance) requires training and competency but would not be in a MS requirement as it pertains to safety regulation. AMC 2 to OR.GEN.200(a)(4) refers to those having safety responsibilities and those with SMS duties being trained which is not the same as being trained to perform their primary task (e.g. air traffic control). Thus there is a potential contradiction in the intent of the IR and associated AMC.

(a)(4) AMC 2 to OR.GEN.200(a)(4) also includes communication on safety matters that is not sourced from OR.GEN.200(a)(4). Thus there is a potential contradiction in the intent of the IR and associated AMC.

(a)(4) AMC 2 to OR.GEN.200(a)(4) does not elaborate on the competency need from OR.GEN.200(a)(4).

(a)(6) This appears to be all encompassing; an organisation has many management system processes (e.g. finance) which would not be expected to be within scope of this IR. AMC to OR.GEN.200(a)(6) does not address requiring a process for making personnel aware of their responsibilities (presumably safety responsibilities). Thus there is a potential contradiction in the intent of the IR and associated AMC.

(a)(7) There is a "shall" in OR.GEN.200(a) and a "shall" in (a)(7) leading to a requirement within a requirement and the clarity of the requirements would benefit from only having one requirement at a time thus removing any ambiguity.

(a)(7) There is a reference to the "adequacy of the procedures"; however the procedures themselves have not been defined previously so which procedures are they ((a)(6) refers to processes)?

(a)(7) It is not clear if compliance monitoring confirms that procedures have been complied with (see AMC to OR.GEN.200(a)(7) 2.) e.g. a particular document has been produced as required by a particular procedure or whether compliance monitoring also assesses if that document is fit for purpose i.e. complies with the procedure and is fit for purpose (it is possible to produce a document that complies with a procedure that is not fit for purpose).

(a)(8) Does this mean that OR.GEN.001, OR.GEN.010, OR.GEN.205, OR.GEN.210, OR.GEN.215 and OR.GEN.220 are to be included in the Management System (as they all have "shalls")? Does the use of the term Part mean the subpart in which this appears (i.e. Subpart Gen) or Part OR in its

entirety?

(b) AMC to OR.GEN.200(b) considers size and complexity but not hazards and associated risks as required by OR.GEN.200(b).

(b) AMC 1 to OR.GEN.200(b) considers size but not nature, complexity, the hazards and associated risk as required by OR.GEN.200(b).

comment by: Boeing

OR.GEN.200  
Para (a)(5)  
page 7

Safeguarding of this information is required to avoid safety data being used as evidence in criminal cases ("criminalization"). Therefore, we request that the following text be added to the end of subparagraph (a)(5): *"This information will not be made public."*

**JUSTIFICATION:** To avoid criminalization of the data submitter and thus diminish the input into this process.

comment 907

comment by: INAER

Management system requirements should use EN ISO 9000:2000 vocabulary and also as much as possible EN ISO 9001:2008 requirements, to provide legal certainty to the stakeholders (e.g. in vocabulary: process, procedure, top management, manual, management / assurance system, records vs forms, ...)

### Argument:

Legal certainty is a general principle of Community law (see case C-308 /06). As GM 1 to OR.ATO.300 (paragraph 8) "General" recognizes, many ATOs or Operators are ISO 9001: 2008 certified. Many organizations are also EN ISO 9110:2006 (ISO 9001 applied to aeronautical maintenance organizations), EN ISO 14001: 2004 and OHSAS 18001 certified, which share most of the vocabulary and some requirements.

European Commission has already required for the EU regulation to integrate with international recognized standards. (see note 1)

The same way, Part OR should integrate ISO 9001: 2008 concepts where possible, in order to:

- Benefit from the knowledge which relies in an international standard
- Clarify concepts
- Avoid different approaches to the same problem
- Reduce administrative papers and procedures to the operators and

ATOs

Nevertheless, part OR does not recognize an integration with ISO 9000:2000 vocabulary, or with its requirements.

**Note 1:** See the EU Eco-Management and Audit Scheme (EMAS), which is a management tool for companies and other organizations to evaluate, report and improve their environmental performance, available since 1995 (Council Regulation (EEC) No 1836/93 of 29 June 1993).

In 2001 EMAS was amended by Regulation (EC) No 761/2001 of the European Parliament and of the Council of 19 March 2001, integrating EN/ISO 14001 as the environmental management system required by EMAS;

See also Commission Regulation (EC) No 196/2006 of 3 February 2006 amends Annex I to Regulation (EC) No 761/2001 of the European Parliament and of the Council taking account of the European Standard EN ISO 14001:2004.

comment

908

comment by: INAER

**OR.GEN.200 "Management System", Paragraph (1) :  
"a Safety Policy"**

Suggested: *"a management system policy, including the safety and compliance commitments, which provides a framework for the safety objectives"*.

Argument:

a) As the title of the paragraph is "management system" (for a total system approach), covering both SMS, CMS and Organization Manual, it is suggested that the policy covers any system under the management system:

The system policy should refer to any management system that is developed in the organization (SMS and CMS, and optionally ISO 9001, OSHAS 18001 and EMAS), covered by the organizational Manual, to facilitate one simple and powerful message to employees related to the top management commitments and framework for the system objectives. (In safety, customer, Health and Safety and Environment areas)

b) As an AMC develops the legal requirements stated in OR.GEN.200 "Management System", OR.GEN.200.a.1 should reference the need for establishing safety objectives, so that AMC to OR.GEN200 (a) (1).2.c is really a means of compliance.

comment

909

comment by: INAER

**1) OR.GEN.200 "Management System", Paragraph (2)  
"A process for identifying safety hazards..."**

Suggested:

*"A documented procedure for identifying hazards..."*

Argument:

The term "process" is internationally defined in EN ISO 9000:2000 (3.4.1), and is clearly something different from a procedure, which is defined in EN ISO 9000:2000 (3.4.5).

A management system should promote a process approach, as done by EN ISO 9000, but in case the documented process should be required, it should be part of the documented procedure.

It should also contain the term "documented", as many procedures can be part of a company, without being required to be written (See Note 1, part 3.4.5 EN ISO 9000:2000)

comment 910

comment by: INAER

**OR.GEN.200 "Management System", Paragraph (3):**  
**"... for safety on the part of senior management"**

Suggested:

**"... for safety on the part of top management"**

Argument:

The term "top management" is defined in 3.2.7 EN ISO 9000:2000 and used in ISO 9001:2008

comment 911

comment by: INAER

**OR.GEN.200 "Management System", Paragraph (5):**  
**"a process for reporting and analyzing hazards..."**

Suggested: **"A do cumented procedure for r eporting and an alyzing hazards..."**

Argument:

The term "process" is internationally defined in EN ISO 9000:2000 (3.4.1), and is something different from a procedure, which is defined in EN ISO 9000:2000 (3.4.5).

A management system should promote a process approach, as done by EN ISO 9001, but in case the documented process should be required, it should be part of the documented procedure.

It should also contain the term "documented", as many procedures can be part of a company, without being required to be written (See Note 1, part 3.4.5 EN ISO 9000:2000)

comment 912

comment by: INAER

**OR.GEN.200 "Management System", Paragraph (5):**

**"... for r eporting and analyzing hazards, incidents and acci dents, and for taking corrective actions to prevent their recurrence"**

Suggested **"... for reportin g, investigating and an alyzing h azards, incidents and accidents in order to take corrective actions to prevent their recurrence, recording them in a safety data base, and performing a data analysis"**

Argument:

An essential part of the SMS is the investigation of the incidents (which is something which goes further to an analysis), and analysis of trends in the "performance based approach" (see paragraph 56 NPA 2009-02a). The relevant part of this requirement is not the "Occurrence Reporting Scheme", as indicated in AMC to OR.GEN.200.a.5, but performing an investigation and

analyzing the trends, from the data gathered in the safety data base.

comment

913

comment by: *INAER***OR.GEN.200 "Management System", Paragraph (6):**

**"An organisation manual containing all management system processes, including a process for making ..."**

Suggested

**"An organisation manual containing :**

- **The scope of the system**
- **The documented procedures established for the management system, or references to them, including an amendment procedure, and a procedure for making personnel aware of their responsibilities, and**
- **A description of the interaction between the processes of the management system.**

Argument:

Integration of 4.2.2 EN ISO 9001:2008 in the regulatory process of a management system.

comment

914

comment by: *INAER***OR.GEN.200 "Management System", Paragraph (6):**

**"An organisation manual containing all management system processes, including a process for making personnel aware of their responsibilities..."**

Suggested:

**No mention to the awareness procedure in the manual, or just a statement: "..., including a reference to a process for making personnel aware of their responsibilities".**

Argument:

The content of the manual, and the minimum required procedures should be specified in an AMC.

By the other hand, the Manual is a top hierarchy document, and therefore it has not to include the process for making personnel aware, but it has to be included in a procedure (2<sup>nd</sup> level management system document).

comment

915

comment by: *INAER***OR.GEN.200 "Management System", Paragraph (7):**

**"A function to monitor compliance of the management system with the relevant requirements and ..."**

Suggested:

**"An organizational structure to monitor compliance ...."**

Argument:

As it can be read in the AMC and GM, that function will be developed by at least following persons:

Safety Manager (see AMC 2 to OR.GEN.200 (a) (3) 2.b.xii

A Compliance monitoring Manager (see AMC 1 to OR.GEN.200 (a) (7)

Auditors. (GM1 to OR.ATO.300, paragraph 28)

Representative. (GM1 to OR.ATO.300, paragraph 28)

In OR.GEN.210 (b) it states that "a person or group of persons shall be nominated with the responsibility of ensuring that the organization is always in compliance with the applicable requirements"

Therefore, there is not just one function, but a complete structure to monitor compliance, which affects Part OR, and Part OPS, as well as Part M for safety purposes. If there has to be a person that takes that responsibility of quality assurance, it should be the Safety Manager the nominated function.

comment 916

comment by: INAER

**OR.GEN.200 "Management System", Paragraph (7):**

**"A function to monitor ... and adequacy of the procedures"**

Suggested:

**"An organizational structure that assigns responsibilities to:**

**a) monitor compliance of the management system with the relevant requirements, and**

**b) Monitor adequacy of the procedures."**

Argument:

Two functions are assigned to the same role in the structure, and there is no objective reason why it has to be this way.

Monitor compliance implies auditing requirements assurance, while monitoring adequacy implies analysis of the whole management system, and processes, maybe as a result of an incident, accident, or efficiency complaints. The adequacy of the procedures has to deal with organizational analysis, technology systems, and internal processes, and a company has to have the ability to decide for itself how it has to be organized, and decide whether it will be one or two different persons who develop those functions.

The system adequacy can be performed by the top management, the safety manager, a contracted external consultant, or a corporate manager.

comment by: Swedish Transport Agency, Civil Aviation Department  
(Transportstyrelsen, Luftfartsavdelningen)

**Comment:**

The ICAO standard (Annex 6 chapter 3.2.4) contains also pro-active requirements that an SMS should include potential risks. The proposed requirement does not explicitly require this.

**Proposal:**

Add requirements on pro-active parts of SMS as per ICAO Annex 6 proposed standard.

comment 1031

comment by: Fédération Française Aéronautique

Taking into consideration the above mentioned consideration on "Section 2 – Management", FFA recommends changing the title of this paragraph into "Safety and Quality management system".

comment 1040

comment by: European Gliding Union (EGU)

OR.GEN.200 Management system:

(b)

Again the requirement that MS shall correspond to the size, nature and

complexity of the activities and the possible hazards/risks inherent in these activities.

This requirement needs firm fixation in the regulation and has to be a constant challenge to each principle or regulation taken aboard. A lot of the requirements to obtain an approval are totally over the top and completely unsuitable for the environment of an air sport club working mainly with volunteers.

comment 1072

comment by: EUROPEAN GLIDING UNION

OR.GEN.200 Management system:

(b)

It is identified here that the MS shall correspond to the size, nature and complexity of the activities and the possible hazards/risks inherent in these activities.

This principle is challenged throughout this NPA. Many of the proposed requirements will be impossible to implement in a gliding or air sport volunteer club environment. The list of requirements is far too prescriptive and pays little recognition to the in-built safety-conscious culture of gliding clubs without having to fill in long daily check lists. The days are not long enough nor the number of people available and willing to do all this support activity! The proposed SMS would be a challenge for any large commercial operation, but for gliding clubs it would be "the straw that breaks the camel's back."

Proposal:

A set of appropriate requirements dedicated to air sport clubs/organisations, to be developed between EGU and EASA during the next review stage.

comment 1154

comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

### **COMMENTS**

Any additional verification activity, as compared to the current situation, shall be at no additional cost for operators.

### **JUSTIFICATION**

The aim of BR is to improve safety level and not to increase survey charges.

\*\*\*

### **COMMENTS**

Requirements and relationship between SMS and existing Quality Assurance departments are not documented. Does SMS (for airlines, ATO and others):

Substitutes to quality Assurance ?

Adds to Quality Assurance ?

Supersedes Quality Assurance ?

**COMMENTS**

The FRMS is included now in Annex 6 of ICAO.

**PROPOSAL**

This part shall clearly refer to this so and integrate ICAO issues.

**JUSTIFICATION**

obvious

\*\*\*

**QUESTION**

( what happens to OPS 1.035 ?)

*OPS 1.035*

***Quality system***

*(a) An operator shall establish one quality system and designate one quality manager to monitor compliance with, and adequacy of, procedures required to ensure safe operational practices and airworthy aeroplanes. Compliance monitoring must include a feed-back system to the accountable manager (see also OPS 1.175 (h)) to ensure corrective action as necessary.*

*(b) The quality system must include a quality assurance programme that contains procedures designed to verify that all operations are being conducted in accordance with all applicable requirements, standards and procedures.*

*(c) The quality system and the quality manager must be acceptable to the Authority.*

*(d) The quality system must be described in relevant documentation.*

*(e) Notwithstanding subparagraph (a) above, the Authority may accept the nomination of two quality managers, one for operations and one for maintenance provided that the operator has designated one Quality Management Unit to ensure that the quality system is applied uniformly throughout the entire operation.*

-Requirement to have a management system does not seem to cover the ICAO intention for a safety management system à Safety Management System requirement would be more precise

- requirement for organisation manual is not necessary for aerodromes since items are already included in Aerodrome manual

- compliance monitoring function should not be requested from aerodromes since it would by far exceed capabilities of smaller aerodromes, furthermore compliance verification should be a core function of the competent authority

comment

1442

comment by: Unique (Zurich Airport)

- Contradicting requirements on third parties must be avoided - e.g. requirements by airline operators on ground handling agents must not contradict requirements put on ground handling agents by aerodrome operators - this does not seem to be foreseen in the NPA

- 5.a Management of Change: internal and external change must be specified since in the case of aerodrome operators the scope needs to be clear - aerodrome operator vs aerodrome and external change may affect other aerodrome users with similar requirements in the envisaged

Part OR, Part GEN

- "Adverse effect on safety" must be specified or changed into "unacceptable effect on safety"

differences between safety management manual, organisational manual and aerodrome manual (as per ICAO) needs to be clarified for aerodromes - justification for the organisation manual is not clear

- 2. scope of compliance monitoring function by far exceeds capabilities of smaller aerodromes and duplicates some of the requirements described under "Training and communication on Safety"

Relationship/link to existing quality management systems is unclear

comment 1485 comment by: Deutsche Lufthansa AG  
related to sub (a)(6)

1. The scope of "management system processes" is not clear: Accounting processes for payments to staff? Procurement processes for office material? Approval processes for duty travels?
2. Existing manual structures are not addressed.

**Proposal:**

1. Provide a clarification, e.g. "*safety relevant* management system processes".
2. Add "The information might be contained in other manuals." taken from AMC 2 to OR.GEN.200.(a)(6)

comment 1487 comment by: Deutsche Lufthansa AG  
**Comment:** note that the organizational manual might be divided into the different activities (e.g. CAT, MRO, ATO) of the organization

comment 1501 comment by: BMVBS (MoT Germany)

The whole concept of the management system lacks the necessary judicial justification and does not conform to the standards of standards of legal certainty. Moreover, we see problematic contradictions between this management system concept and the proven concept of JAA organisation principles (system of postholders and quality management system) on the one hand and the ICAO SMS concept on the other hand.

Some examples of the missing characteristics are:

The proactive character of a SMS is not incorporated.

The safety assurance component (including the continuous improvement aspects) of the SMS is missing.

The directing reporting line between the person responsible for the SMS implementation and the accountable manager is not stipulated.

The consequence is a high amount of effort which has to be invested by the organisations in order to comply with this requirement without yielding any improvement in terms of safety. Therefore, we strongly recommend redrafting this rule completely based on the proven JAA principles (postholders and quality system) and incorporating the ICAO SMS provisions. Preferably, this redrafting should be done by a group of experts incorporating the experience of the stakeholders. If these provisions remain in the opinion sent to the EASA

committee, a positive vote to the proposal would be impossible for Germany since this requirement would complicate the compliance with ICAO standards.

Recommended amendment of the text:

~~(a) An organisation shall establish and maintain a management system that includes:~~

~~(1) a safety policy;~~

~~(2) a process for identifying safety hazards and for evaluating and managing the associated risks;~~

~~(3) clearly defined lines of safety accountability throughout the organisation, including a direct accountability for safety on the part of senior management;~~

~~(4) personnel trained and competent to perform their tasks;~~

~~(5) a process for reporting and analysing hazards, incidents and accidents and for taking corrective actions to prevent their recurrence;~~

~~(6) an organisation manual containing all management system processes, including a process for making personnel aware of their responsibilities and an amendment procedure;~~

~~(7) a function to monitor compliance of the management system with the relevant requirements and adequacy of the procedures. Compliance monitoring shall include a feedback system of findings to the accountable manager to ensure corrective action as necessary; and~~

~~(8) any additional requirements that are prescribed in this Part.~~

(complete redrafting necessary)

OR.GEN.200 (a) (5) page 7

This information should be protected to remove the threat of criminalization. The reporting of hazards and incidents will be reduced if the reporter fears legal repercussions. Prefer the following sentence be added:

"This information will not be made public or result in enforcement action"

comment 1753 comment by: *Norwegian Air Sports Federation*

(b)

It is identified here that the MS shall correspond to the size, nature and complexity of the activities and the possible hazards/risks inherent to these activities.

The AMC material provided in this NPA does not reflect any differences corresponding to nature and complexity. The AMC material provided is written for commercial organisations. Most of the AMC material is NOT applicable to air sports organisations.

comment 1766 comment by: *DFS Deutsche Flugsicherung GmbH*

OR.GEN.200(a)(4) This is a very broad scope and could be interpreted as including those in an organisation that are not involved directly in the service delivery (i.e. safety significant), as their tasks (e.g. finance) requires training and competency but would not be in a MS requirement as it pertains to safety regulation.

AMC 2 to OR.GEN.200(a)(4) refers to those having safety responsibilities and those with SMS duties being trained, which is not the same as being trained to perform their primary task. Thus there is a potential contradiction in the intent of the IR and associated AMC.

AMC 2 to OR.GEN.200(a)(4) also includes communication on safety matters that is not sourced from OR.GEN.200(a)(4). Thus there is a potential contradiction in the intent of the IR and associated AMC.

OR.GEN.200(a)(6) This appears to be all encompassing; an organisation has many management system processes (e.g. finance) which would not be expected to be within scope of this IR. AMC to OR.GEN.200(a)(6) does not address requiring a process for making personnel aware of their responsibilities (presumably safety responsibilities). Thus there is a potential contradiction in the intent of the IR and associated AMC.

OR.GEN.200(a)(7) There is a reference to the "adequacy of the procedures"; however the procedures themselves have not been defined previously so which procedures are they ((a)(6) refers to processes)?

OR.GEN.200(b) AMC to OR.GEN.200(b) considers size and complexity but not hazards and associated risks as required by OR.GEN.200(b).

AMC 1 to OR.GEN.200(b) considers size but not nature, complexity, the hazards and associated risk as required by OR.GEN.200(b).

The Management System should fully align with the ICAO 4-component SMS framework and related terminology.

Rationale/Justification:

EASA should not be the only authority in the world not harmonizing its SMS framework and terminology with ICAO SMS Framework. It would add much value, avoid a lot of re-work at air operators level, and avoid misunderstanding and confusion, if EASA could align with ICAO 4-component SMS.

The proposed EASA framework is more difficult to understand and there is repetition/overlap and confusing terminology.

comment

2023

comment by: Avinor AS

Our understanding is that the requirements proposed in NPA 2008/22 will be applicable only to the aerodromes that are inside the "scope" of aerodromes to be covered by the amendment to the basic regulation 216/2008. Hence, the specific distinction between *small organisations* and *other organisations* in the AMC makes it necessary to provide a definition of "small" in this regard. No such definition is offered in the draft decision.

To separate between *small organisations* and *other organisations* for ATM/ANS providers is not relevant.

It should be allowed to combine the tasks of the Safety Manager and the Compliance Manager so that they may be covered by one person. It is, however, necessary to better define the relationship and interaction between the Safety Manager and the Compliance Manager (AMC to OR.GEN.200(a)(7) Management System, Compliance Monitoring System – General 3.a.-d.) since there appears to be overlapping accountabilities and tasks.

comment

2024

comment by: AIRBUS

The point (5), "a process for reporting and analysing hazards, incidents and accidents and for taking corrective actions to prevent their recurrence" is in fact a sub-activity of the point (2), "a process for identifying safety hazards and for evaluating and managing the associated risks".

Safety reporting is simply one way to perform Hazard Identification.

The point (5) should be either deleted or explicitly integrated into point (2) with more detailed explanations of the content.

comment by: ETF

**ETF General comment to Management System AR and OR**

The additional safety level by a Safety Management System is most welcome.

Despite the good European safety records in aviation over the past decades, the increase in traffic will by numbers lead to more incidents and accidents. According to Dekker and Woods 'The high reliability organizational perspective' of an organisation is usually unable to change its model of itself unless and until overwhelming evidence accumulates that demands revising the model. They put forward that the failure in aviation today is not really the result of individual or components. Instead it is related to the ability of the industry to effectively adapt to and to absorb variations, changes, disturbances, disruptions and surprises.

They suggest that a number of safety dimensions are looked at. One dimension is the commitment of management to balance the acute pressure of production with the chronic pressures of protection.

Other important factors are

- Preparedness/ Anticipation. This implies picking up evidence of developing problems
- Opacity/Observability. That is active monitoring of safety barriers and analysis of how close to the edge the organisation is as well as evaluating degraded defences. An active feedback to all levels in the organisation is recommended.
- Flexibility/Stiffness. Evaluation of how the organisation adopts to change, disruptions and opportunities.

In particular when the production pressures are intense or rising an analysis of the impact on the organisation should take place.

The above recommendations could be included as GM to the Management System.

comment by: *Europe Air Sports PM*

OR.GEN.200 Management system:  
(b)

It states here that the MS shall correspond to the size, nature and complexity of the activities and the possible hazards/risks inherent in these activities.

This principle is challenged by EAS throughout this NPA. Many of the proposed rules will be incapable of implementation in an air sports club environment involving primarily volunteers. The detailed rules are far too prescriptive and pay little regard to the in-built safety-conscious culture of the vast majority of air sports clubs. The days are not long enough nor the number of people available and willing to do all this check list ticking and support activity.

The proposed SMS would is totally inappropriate and impractical for air sport

and recreational flying clubs.

Proposal:

A set of appropriate rules dedicated to air sport clubs/organisations, to be developed between EAS and EASA during the next review stage.

comment 2269 comment by: *Oxford Aviation Academy*

Large and complex organisations would normally have a corporate (organisation) manual which makes a reference to both processes that relate to aviation compliance, and processes that relate to business best practice. The manual would not necessarily contain all the processes themselves because 'ownership' is at the relevant functional/department level within the organisation. We propose item (6) is amended to read "an organisation manual making reference to the management system processes, including a process for making personnel aware of their responsibilities and an amendment procedure".

comment 2289 comment by: *Light Aircraft Association of the Czech Republic*

Aviation training in Member states currently takes place mostly under the oversight of National Aeroclubs and national Sports Associations. By its nature the training is mostly non-commercial in nature and delivered by volunteers. The aeroclubs and associations have in place management systems that provide adequate quality and safety management. Most of the training is delivered through the clubs.

LAA CR understands that EASA wants a standardised approach. We appreciate comment at OR.GEN.200(b), but unfortunately it is difficult to see through this NPA 2008-22c that EASA has taken into consideration "the nature and complexity of the" sports and recreational activities.

Proposal:

Please take in account the nature and complexity of the sports and recreational activities. Instead of difficult and complicated rules use what is already working. Do not write derivatives of rules for commercial sector and realize that there is sector which is using flying as a form of relaxation and fun rather the money making.

comment 2352 comment by: *FINNAIR*

The scope of the management system processes is not defined.-

Proposal: add "The information might be contained in other manuals" taken from GM 2 to OR GEN 200 (a) (6).

In case of AOC holder the management system should be described in OM-A, chapter 1.

**GM to OR.GEN.200(a)(6) Management System ORGANISATION MANUAL**

The organisation manual is the top level document in the organisation. It is not required to duplicate information in several manuals. The information may be contained in other manuals, e.g. aerodrome manual, **operations manual** or training organisation manual.

comment 2355 comment by: *FINNAIR*  
 Comment: note that the organizational manual might be divided into the different activities of the organisation in case of multiple approvals.

comment 2379 comment by: *Klaus HARTMANN*

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 – 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden.

Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne

Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freie Ballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freie Ballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manualls' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini - ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.**

**Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's**

**jeweils für die Theorieausbildung und die Praxisausbildung so I  
möglich sein.**

comment 2429 comment by: *Nordic Airways*

The compliance monitoring system described in (a)(7) should instead be called "Quality Assurance System" and its manager "Quality Assurance Manager".

The Management system described in OR.GEN.200 is the same as a Quality System. That wording was also used in EU-OPS. It does not matter what this Management/Quality system is called, however the Quality Assurance System described in (a)(7) is NOT a "compliance monitoring system" but a "Quality Assurance System". The wording "compliance monitoring" implies that the system only monitors that the documented procedures in company manuals comply with regulations and that the procedures are complied with. However, a big part of the system is the monitoring of "adequacy of the procedures" as described in (a)(7).

It is my experience that many companies and NPHs unfortunately focus on "copying" text from authority regulations into company manuals without thinking how to best implement the procedures in their organization. A "compliance monitoring system" would then easily show compliance with all regulations but the company may still have a very low quality. The "compliance monitoring system" would thereby not increase safety - on the contrary it might actually decrease it!

As an example, the training syllabus in OM-D might be identical to Part-OPS for crew and the training certificate might state that the training included all items in Part-OPS and the written test might be passed but that doesn't help if the instructor was very bad and the written test was a multiple choice questionnaire with only two options where the incorrect alternative was obviously incorrect.

The Quality Assurance System is correctly described in AMC 1 to OR.GEN.200(a)(7), but the name of the system should also reflect this fact.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart GEN - Section 2 -  
OR.GEN.205 Contracting and purchasing**

p. 7

comment 123 comment by: *DCA Malta*

**OR.GEN.205(b)**

It should be clear that before subcontracting an organisation needs the approval of the competent authority.

comment 216 comment by: *ECA- European Cockpit Association*

ECA requests clarification about this article. Is there a transfer of responsibility to the contractor? Or is this only an administrative procedure? What are the changes compared to the present situation? In which cases this article applies, only to the ones in the AMC/GM or are there any other cases the contractor may like to subcontract?

comment 265 comment by: *ECA- European Cockpit Association*

Sentence to be moved to OR.GEN.200

(c) Confidential reporting systems should be based on established human factors principles including an effective feedback process.

Justification

Para 1 d is not effective as an AMC, the protection of the reporter can only be assured if this is upgraded to IR

comment 277 comment by: *Susana Nogueira*

(b) Text as such is too open and leaves too much flexibility

comment 329 comment by: *UK CAA*

**Page No:**

7

**Paragraph No:** OR.GEN.205

**Comment:** It is considered important that contracted organisations should have an acceptable safety management system.

**Justification:** It is important that SMS is integrated with contracted services for a total systems approach and this should be a prerequisite for contracting services.

**Proposed Text (if applicable):** add para c to OR.GEN.205: Contracted organisations shall have an acceptable safety management system in place appropriate to the size, nature and complexity of the contracted activity.

comment 394 comment by: *Civil Aviation Authority of Norway*

Comment to (b);

Reading this paragraph, it may seem that an organisation can contract unauthorized organisations to perform services on behalf of the approved organisation. This must be clearly specified as to apply only to work/services that doesn't require a special authorization, or has no direct affect on the flight safety performance.

comment 851 comment by: *NATS*

(a) & (b) It has been assumed that AMC to OR.GEN.205 is meant to address

OR.GEN.205 (a) and (b). AMC to OR.GEN.205 only addresses contracting and not purchasing as required by OR.GEN.205. It also appears to be limited to services and not to products as required.

comment 989 comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

We support the general idea of the requirement but there are some ambiguities and loopholes in the text that need to be addressed, especially in paragraph e) of the AMC. There might be a risk that the requirement in conjunction with EASA's AMC opens up for misuse of contracting out services to organisations that does not have the necessary approvals. Therefore it must be built into the text/wording a limitation in order to hinder an indirect expansion of the activities.

**Proposal:**

Build into the text/wording a limitation to hinder an indirect expansion of the activities. Basically this means that a contracted organisation may not perform an activity that requires an approval even if the contracting party has an approval.

comment 1032 comment by: *Fédération Française Aéronautique*

Considering this rule completely unrealistic and not adapted to for "Very small organisations" (see our proposed definition in the FFA comment on NPA page 1 above), and "Small organisations", FFA requests to delete this rule or to keep it only for "other/large organisations".

comment 1431 comment by: *Unique (Zurich Airport)*

- Contradicting requirements on third parties must be avoided - e.g. requirements by airline operators on ground handling agents must not contradict requirements put on ground handling agents by aerodrome operators - this does not seem to be foreseen in the NPA

-this is even more relevant when aerodromes are held accountable for the safety performance of the aerodrome acc to the essential requirements in the Basic Regulation, Annex Vb1f (pending)

comment 1625 comment by: *British Airways Safety & Security*

This section, as proposed, extends to activities that are outside the jurisdiction of EASA and could include purely commercial contracts. The wording should be changed in section (a) from **or purchasing any part of its activity**, to **or purchasing any part of its activity under this approval**,

comment 842 comment by: *Frank Schweppe*

In ballooning, the organisation may consist of just one individual instructor working from home.

Amend

c)

The organisation shall have sufficient appropriately qualified staff for the planned tasks and activities.

To read 'The organisation shall have sufficient appropriately qualified staff for the planned tasks and activities. For BPL instruction, this may be just a single instructor.

comment 853 comment by: *NATS*

There does not appear to be an AMC or GM to this IR. Is this intentional? If it is how is compliance with OR.GEN.210 to be agreed and demonstrated?

(b) There is a potential contradiction here as a person or group of persons being nominated with regard to compliance with the applicable requirements as AMC 1 to OR.GEN.200(a)(7) 3. c. ii. precludes a nominated post holder from being the designated manager for compliance monitoring.

comment 919 comment by: *INAER*

**OR.GEN.210 "Personal Requirements" (e):**

**"The organization shall ensure that all staff is aware of the rules and procedures relevant..."**

Suggestion:

**"The organization shall ensure that all staff is aware of the legal and regulatory requirements and procedures relevant to the exercise of their duties"**

Argument:

The internal rules are already contained in the procedures. Therefore, it is redundant to specify "Rules and procedures", if refer to internal rules. If refer to external rules, it should clearly specify "legal and regulatory requirements

comment 991 comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

It is the organisation that nominates the persons that are responsible for a certain task. The text need to be more precise.

**Proposal:**

The words "by the organisation" should be added after the word "nominated" in the first sentence of the paragraph in order to get more precision.

comment 1033 comment by: *Fédération Française Aéronautique*

Considering this rule non adapted and unrealistic for "Very small organisation"

(see our proposed definition in the FFA comment on NPA page 1 above) and "Small organisations", FFA requests to delete this paragraph or to keep it only for "other/large organisations".

comment 1041 comment by: *European Gliding Union (EGU)*

OR.GEN.210 Personnel requirements

The requirements in OR. GEN.200(b) again are made for commercial organisations.

To nominate an "Accountable Manager" is in the club/federation environment difficult as in sport organisations the elected board is taking the responsibilities. Additionally we have to take care of the different legal systems in the member states in regard to non-profit organisations. Considering an umbrella training organisation driven by the air sport associations, the respective tasks are performed already by volunteers in the majority of cases.

comment 1076 comment by: *EUROPEAN GLIDING UNION*

OR.GEN.210 Personnel requirements

In reference to OR. GEN.200(b) the requirements must fit with the nature of the organisation.

Again, there exists a big difference in the structure and the way the management is done in a commercial company and non-profit air sport clubs/organisations.

Nominating an "Accountable Manager" in a club/federation environment can be difficult where the elected board or club governing committee members share the associated responsibilities under national law, which have different requirements within a number of member states.

Comment: In case of AOC holder's this is not specific enough. Is it limited to post holders or if the responsibilities are covered adequately is there need for 4 postholders (large operator/CAT) or may there be 10 post holders?

Proposal: write more specific text.

comment 2379  comment by: Klaus HARTMANN

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:  
Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 – 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf

Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freie Ballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freie Ballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte**

**Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.**

**Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.**

comment by: ECA- European Cockpit Association

OR.GEN.215 Facility requirements

The organisation shall have adequate:

(a) facilities for all planned tasks and activities.

(b) office accommodation for the management of all planned tasks and activities.

Justification:

The use of "adequate" is not in line with language requirements by EU law which require clear and unambiguous regulation that does not leave doubts in the mind of the reader

comment 687

comment by: Royal Danish Aeroclub

OR.GEN.215 (b)

Today a lot of organisations do not have accommodation - and this should not be a demand. With modern computer technology, management do often just need

a portable computer. Freedom to do the work wherever wanted should be kept. Accommodation can be anything from not existing to a large office facility. The important thing is, that the management work is done properly.

The paragraph (b) should be deleted.

comment 843

comment by: *Frank Schweppe*

Under b) note that for BPL instruction, due to the nature of ballooning, there is often no fixed office accommodation (balloons usually do not operate out of airfields and many balloonists, including instructors, operate from home, the 'office' being their kitchen or living-room table or at best a small room converted to a home office. The office may be just a file folder and a laptop computer carried in the retrieve vehicle, and a mobile phone to call weather services and ATC.

5) Any record used within the Compliance monitoring System shall be kept for at least 5 years

comment 36

comment by: *George Knight*

Again this rule is not proportionate for small clubs.

- (d) "...accessible to the competent authority" implies on-line to the authority. Presumably this should mean 'on request'.

comment 370

comment by: *Aero-Club of Switzerland*

Please add under (c) the desired data storage duration!

Justification: The same duration must be valid for all organisations.

comment 854

comment by: *NATS*

This is a very broad scope and could be interpreted as including records in an organisation that are not involved directly in the service delivery (i.e. safety significant) as the records (e.g. finance) need to be retained but should not be a MS requirement as it pertains to safety regulation.

(d) This implies some form of direct access to organisations records by the competent authority, rather it would be more sensible if records were made accessible (available) upon request.

comment 921 comment by: INAER

**OR.GEN.220 "Record Keeping" (b):**

"The format of the records shall be specified in the organizations procedure"

Suggestion:

**"When applicable, the format of the records shall be referenced in the organizations procedure and be part of the system documentation"**

Argument:

First, not all records must have a format for it. (e.g.: objectives setting and compliance monitoring, inputs to management review or output to management review ...). Forms are a help, but not an obligation in a management system (see definition of record in 3.7.6 ISO 9000:2000).

Secondly, the format has not to be specified in the procedure, but it is enough that it is referenced in the procedure. Moreover, it is highly recommended that the documentation is modular in its design (see GM 1 to OR.ATO 300, point 18 "modular procedures"), and the documents are internally hierarchied, so that the manual is the highest level document, then the procedures, followed by SOPs, Technical instructions, forms and guides.

OR.GEN.220 sub a  
It's not clear whether a system of record keeping means one overall system or separate systems per organization part (such as TRTO, AeMC etc).

## B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO

p. 9

comment 203 comment by: DGAC FRANCE

Creation of Subpart AFTTO  
*This subpart has to be inserted in the NPA 22 just after Subpart ATO.*

**SUBPART AFTTO – approved flight test training organisations**

**OR.AFTTO.005 Scope**  
This Subpart establishes the additional requirements to be met by an organisation to qualify for the issue or continuation of an approval to provide flight test training for pilots.

**OR.AFTTO.010 Legal entity and financial resources**  
(a) An AFTTO shall be an organisation or part of an organisation registered as a legal entity.  
(b) An AFTTO shall demonstrate to the competent authority that sufficient financial resources are available to conduct flight test training to the approved standards.

**OR.AFTTO.015 Application**  
(a) Applicants for an initial approval shall provide the competent authority with:  
(1) the following information:  
(i) name and address of the organisation;  
(ii) date of intended commencement of operations;  
(iii) personal details and qualifications of the flight instructors;  
(iv) name and address of the aerodromes from which the training is to be conducted, and the name of the aerodrome operator;  
(v) list of category of aircraft to be used for training,  
(vi) description of the training that the organisation wishes to provide, and the corresponding theoretical knowledge and flight instruction syllabi.  
(2) the flight test operational manual.  
(b) In the case of a change to the approval, applicants shall provide the competent authority with the relevant parts of the documentation or manuals referred to in (a).

*Comment: For flight test purpose, specify the category of aircraft is sufficient to comply with the need of flight test training. For example : rather than*

*introducing in the list of aircraft "Falcon 20 F-WGAD", "Twin jet-engines 10tons class" is sufficient*

**OR.AFTTO.110 Personnel requirements**

(a) A Head of Training (HT) shall be nominated. The HT's responsibilities shall include ensuring that the training provided is in compliance with Part-FCL requirements. The head of training must have extensive experience in the flight test activity as a test pilot in the relevant flight test category.

(b) The ground instructors shall have appropriate knowledge and experience in aviation and flight testing in particular.

(c) The flight test rating instructors shall hold the qualification required by Part-FCL and have experience in the flight test category for which they are demonstrating or monitoring any specific type of flight tests.

*Comment: "Flight test rating instructor" is defined in comments on NPA 17 (PART FCL).*

**OR.AFTTO.120 Record keeping**

(a) The following records shall be kept for a period of at least 5 years:

(1) details of ground, flying, and simulated flight training given to individual students;

(2) detailed and regular progress reports from instructors including assessments, and regular progress flight tests and ground examinations; and

(3) information of the qualifications of the students, including the expiry dates of medical certificates and ratings.

(b) The training records shall include a written report by the student for any flight performed including, where applicable, data processing and analysis of recorded parameters relevant to the type of flight testing.

**OR.AFTTO.125 Training programme**

A training programme shall be developed for each type of course offered.

**OR.AFTTO.130 Training aircraft and FSTDs**

An AFTTO shall have access to a fleet of aircraft or FSTDs containing an adequate number of aircraft and appropriately fitted with flight testing instrumentation.

**OR.AFTTO.135 Aerodromes**

An AFTTO shall use aerodromes or operating sites that have the appropriate facilities and characteristics to allow training of the manoeuvres relevant, taking into account the training provided and the category and type of aircraft used.

**OR.AFTTO.140 Prerequisites for training**

An AFTTO shall ensure that the students meet all the prerequisites for training established in Part-FCL.

comment

comment by: DGAC FRANCE

We would like to ask if the agency aim to include the training organisation related to air traffic controlers and PART 66 personnel in that subpart, in this case this subpart will have to be review in totality (scope...)

comment

811

comment by: Light Aircraft Association UK

This is a significant, and possibly prohibitive, undertaking for the one-man organisation. The LAA has concerns that the proposals will strongly discourage organisations from gaining this approval.

comment 870

comment by: NATS

Whilst not directly commenting upon subpart ATO - Approved Training Organisations due to this being directly and solely related to flying training, NATS wishes to point out that there are significant differences between flying training and air traffic control training in terms of the nature, method and requirements. Any future work on air traffic control training should take this into account - the proposed rules and AMCs for flying training will, in many cases, not be directly transferable to air traffic control training.

comment 2020

comment by: AOPA-Sweden

In the RIA (appendix IV to NPA22-a) it is declared that about 5% of the current simplest pilot training organizations (registered facilities) the new structure of rules will be relevant. AOPA-Sweden cannot find a word in the whole NPA 2008-22c about this fact. AOPA-Sweden requires a clarification in this subpart about which type of training organizations are excluded or which organizations required to follow the subpart ATO.

comment 2288

comment by: FAA

**OR.ATO.015 Application (a) 1 (iii)** Appears to request details and qualifications of all instructors employed in the ATO where as the associated AMC material only request this information for the management instructor staff. Other than establishing basic qualification for the general instructor cadre, is there a need to provide detail qualifications of all instructors?

**Recommendation:** It would appear that the AMC specification is more practicable than the OR wording and requirement and therefore the wording in the OR section should be modified to that contained in the AMC document.

comment 2388

comment by: European Sailplane Manufacturers

ATO - requirements for approved training organisations

In gliding the majority of training is done in clubs and federations which are non-profit organisations and where the personnel consists of the club/federation members spending their spare time without payment.

Any approach taken to supervise / regulate / approve such organisations like fully professional and commercially operating organisations is simply inadequate and not reasonable.

To the knowledge of the European sailplane manufacturers the diverse and different European systems of pilot traing have not led to a safety problem in gliding.

As the manufacturers have contact into all European member states the really can say with reason that no single member state has a problem stemming from poor or inadequate pilot training.

From this it can be deduced that no safety improvement can be expected by

introduction of a new system like the Subpart ATO.

On the other side many requirements of ATO will result into enforcement of changes to existing training organisations.

All organisations will be forced to understand / apply / adhere to the new rules and get the regarding approvals - with associated effort and costs but without an expected safety benefit.

Therefore the sailplane manufacturers oppose direct application of this regulation to the small and sport aviation sector.

The only fitting approach can be legislation which allows the existing systems to proceed and allow all sport and recreational pilots in Europe to continue their flying activities without national borders.

## B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 1

p. 9

comment 680

comment by: *Aero-Club of Switzerland*

The subpart ATO is made for commercial ATO. Over 90% of the glider schools in Switzerland are club-based "Registered Facilities (RF)" managed by volunteers. Also the flight instructors are volunteers.

Proposal: "Light ATO" or "Registered facilities" (RF) should be created for all non-commercial training organisations.

Justification: A gliding club with an integrated flight training organisation offers the training for the members only. The costs are an important factor, especially for young people. The requirements in this subpart ATO are too complicated, they are cost -drivers for the gliding community and are hindering the future development. Today's RF requirements are fully sufficient.

comment 1052

comment by: *European Gliding Union (EGU)*

General comment / proposal:

This document on ATOs is definitely written with the commercial operators in mind and we ask to create a level of ATO suitable for the non commercial, club based, voluntarily run non-profit ATO.

We recommend to use the following structure:

1. Commercial ATO
  - "small" - with a clear definition of what is "small"
  - "other"
2. Non-profit ATO

comment 1762

comment by: *Swiss Power Flight Union*

The subpart ATO is made for commercial organisations. The most of the flying schools in Switzerland are club-based "Registered Facilities" (RF), managed by volunteers and also the flight instructors are volunteers.

Proposal: A "Registered facility" should be created for all non-commercial

training organisations.

Justification: A flying club with an integrated flight training organisation offers the training for the members only. The costs are an important factor, especially for young people. The requirements in this subpart ATO are too complicated and cost -drivers.

We need not more complicated requirements, that the RF-requirements valid today.

comment 2359

comment by: FAA

**OR.ATO.110 Personnel requirements (a)** Would imply that the title for this person must be "Head of Training" which is very descriptive instead of specifying the overall duties and responsibility of the person in that position. By being this specific, it may require that many operators needlessly amend there structure and all associated documentation to incorporate the "Head of Training" title.

**Recommendation:** The use of a general title with the specific duties and responsibilities for that position spelled out would accomplish the same end result without the necessary change of the structure of existing operators.

comment

2377

comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*

EPFU believes that this section 1 - General, which applies to all training organisation is not adapted to Small non commercial, non profit training organisation.

EPFU request that a new section1 will be implemented to take into account the real situation in that category of Small organisations. In particular, OR.ATO.010 "Legal entity and financial resources" (b) is completely unrealistic and impossible to implement for that category of training organisation.

comment 84

comment by: *phil mathews*

Flying schools working solely on PPL activities are in many case small. The amount of regulatory paperwork required of these schools should be kept to a minimum. Use of the UK CAA RTF form is more than adequate to cover the requirement of the Authority knowing which scools are providing flying training in this area.

comment 101

comment by: *DC-AL*

I believe the European Aviation Safety Agency and the Authorities should not be involved in financial regulation.

comment 104

comment by: *Peter Kynsey*

The requirement for all providers of training to be approved cannot be justified by any safety case, EASA has provided no such justification. In the UK providers of PPL training are only required to register with the CAA. For small

organisations this is an entirely practical way to operate and has not caused a deterioration in training standards in the UK. EASA'S proposals are only relevant to organisations providing training for professional licences but are excessively onerous for the PPL market. The requirement for proof of financial resources will be a paperwork exercise proving nothing, EASA itself admits it is not good enough to provide consumer protection so what is its purpose? In summary EASA is trying to impose on the PPL training world, requirements relevant only to operators in the commercial flying training world, in the same way that it imposed part M on light aviation when part M was suitable only for commercial aircraft maintenance.

EASA is providing another nail in the coffin of General Aviation when the establishment of EASA gave a unique opportunity to reduce regulation in Europe and make training providers here able to compete with those abroad, for example in the USA. Sadly EASA never seized this opportunity.

comment 107

comment by: *Flintshire Flying School Ltd*

ATO 005 a

All FTO would now seem to be included as ATO; there is no provision for Registered Facilities as currently.

To attain ATO status will require considerable back office effort and time by both the FTO and the regulatory authority. Will the ATO authorisation have to be also a physical inspection/audit of the defined facilities, even for FTO offering only LPL & PPL training? Anything other than a procedural audit will become a burden on the ATO and if required regularly it is difficult to understand how the regulatory authority will be able to staff this requirement, let alone the ATO.

(c)(3) Delete this paragraph.

Is included in part FCL as a licence

comment 695

comment by: *Maarten*

Hello,

Why do I take the time to invest time in this complicated text?? It's for my (and thus for others) safety. Why? I am just a simple PPL pilot with about 300 hours. When you are flying VFR you generally get to your destination aerodrome. But a couple of times for the return flight it would have been better to have returned under IFR flight-rules. So for safety purposes I want to get a IFR qualification. So I need to find a good and not too much money costing ATO to pass the qualification.

Now first general conclusion remarks on this text;

- What is the end purpose of this future ATO and FSTD regulations? That there are more and save pilots in Europe for a reasonable cost?? If the answer is no, just stop reading and adopt this text. If yes, then "you" have to make a considerable attitude change. Why? This ATO project is apparently made for big commercial ATO's with complicated FTSD. The small commercial ATO's and non-profit ATO's (flying-clubs) will simply disappear because the "back-office" regulations are just too complicated and expensive!! But maybe that's the hidden agenda??

- This ATO project is not made for small commercial ATO's and non-profit ATO's with "simple" FSTD's. So there has to be an exception for them.

- I propose that by simple statements in the text it says: "except for small ATO's".

- "Small ATO's" are small commercial ATO's (with a limited number of planes and instructors (20??), and all non-profit ATO's (flying clubs).

- In this project the ATO's backoffice requirements are too heavy. The CMS/CMC request/proposal is completely a pilot and flying killer; with this pilots and instructors will stay on the ground and will not be flying or instructing!! The same remark can be made to all the checks and auditions asked for the FTSD.

I will continue in the perspective of a flying club to give detailed remarks in the text. Thank you and have a good day and let me/us fly!!!!

comment by: *European Gliding Union (EGU)*

OR.ATO.005 Scope

This paragraph mentions a number of different kinds/types of training courses; no differentiation is made in regard of commercially organised training (where training is a business goal of the company) or non-profit organisation where training is given on behalf of the members without any commercial goal.

We propose – as already said – to make a clear distinction between commercial

and non commercial organisations. The legal status of the organisation is the ultimate factor.

comment 1077 comment by: *EUROPEAN GLIDING UNION*

**OR.ATO.005 Scope**

This article describes a number of different types of training, but no differentiation is made in regard of commercially organised training (where training is a business goal of the company) against a not-for-profit organisation where training is provided by and on behalf of the members without any commercial goal.

Proposal.

There is a need to make a clear distinction between commercial and not-for-profit organisations. The legal status of the organisation may be the determining factor.

comment 1099 comment by: *EUROPEAN GLIDING UNION*

General remark and proposal

As this document relating to ATOs is written from the commercial training viewpoint, the EGU proposes to create an alternative type of ATO: a "not-for-profit ATO" with relevant and proportional requirements.

This indicates that the following structure is required:

1. Commercial ATO

It is up to these organisations whether if it necessary to make a distinction between "small" and "other".

2. Not-for-profit ATO

For all the air sport clubs/federations educating and training their members in their chosen sport and, further, the work is done primarily by the members-volunteers.

Proposal:

The EGU is prepared to work with the Agency to develop not-for-profit ATO requirements relevant to and acceptable to EASA and the sport of gliding across all member states.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 1 - OR.ATO.010 Legal entity and financial resources**

p. 9

comment 33 comment by: *Robert McPhee*  
 How does this statement affect flying clubs which are currently Registered Training Facilities and are run by military personnel on a military station under the ultimate authority of the station commander and therefore the Ministry of Defence? Will they have to be broken out from such control and become companies in their own right or will the military association be considered "Legal entity"?

comment 37 comment by: *George Knight*  
 -(a) This (inadvertently perhaps) may prevent a national sporting body, such as the UK's BGA, which is a federation of self governing member clubs, each of which is a separate legal entity, from being an umbrella ATO overseeing training in its member clubs.  
 The issue could be resolved by changing the wording to "(a) An ATO shall be an organisation, a part **of or a member** of an organisation registered as a legal entity."

comment 38 comment by: *George Knight*

-(b) This does not consider the case of non-profit making, charitable, members' clubs that by their very nature have negligible financial resources or other assets, yet in many cases have operated successfully, achieving excellent standards, for many decades by use of volunteers.

It is not for the authority to approve club's financial affairs – only ensure that they achieve appropriate technical standards.

comment

66

comment by: *British Gliding Association*

To date, gliding training in the UK has been conducted within a integrated structure that comprises both the national gliding association (BGA) and all clubs.

The BGA is responsible for the overall definition and development of the training system and the oversight of training operations; training operations are directly managed by clubs. Similar process takes place within most member state gliding federations.

The system works extremely well, it ensures coherence in all aspects of the training system; allows for the rapid dissemination of new practices; and, reduces overhead and administration costs.

The fundamental performance of the system is attested in the excellent quality of trained pilots and overall safety levels.

We strongly suggest, therefore, that it should be possible to meet this requirement through a coherent gliding federation of clubs rather than requiring each club to become an individually approved training organisation.

comment

86

comment by: *James Carrie*

Does this imply that an individual cannot be an ATO? I teach flight theoretical knowledge from my home. I am a registered facility. I earn only a small amount of money at it. What possible benefit can there be to my customers making me form a legal entity (Limited Company in the UK I presume)? Will this improve flight safety, the quality of my training or the enjoyment of my students. NO in every case.

An Individual should be allowed to register as an ATO.

comment

141

comment by: *Aero-Club of Switzerland*

The Aero-Club of Switzerland has some questions:

Who will define what will be a "sufficient funding"? And: At what time this proof has to be delivered, on what base: An annual report? A quarterly report?

Is the Agency aware of the fact that a very high percentage of all training in aviation is given on a voluntary base in clubs?

If the answer to all these questions is "yes", the proposed text can be accepted. If the answer is "no" we ask the Agency to better define all relevant key-words.

- comment 217 comment by: *ECA- European Cockpit Association*
- Comment on paragraph (b):  
The paragraph should be deleted or reworded to link it with safety requirements and extended to all organisations.
- Justification:  
There should not be a link between financial resources and safety levels. Financial robustness to ATOs should also be applied for operators and AeMCs. What is recognized here for the ATOs is also valid for operators or AeMCs.
- 
- comment 281 comment by: *Susana Nogueira*
- Question to EASA  
Is not possible to establish any kind of ATO by an individual person? For example for LPL training
- 
- comment 334 comment by: *UK CAA*
- Page No:**  
9 of 83
- Paragraph No:** OR.ATO.010 (b)
- Comment:** The requirement for ATOs to demonstrate sufficient financial resources has no clear safety justification and any related obligation given to the competent authority to check or approve such a demonstration would expose it to claims from students of failed ATOs.
- Justification:** Despite the claim in the AMC to OR.ATO.010(b) that the requirement is not a consumer protection measure the safety justification is not established. Including the requirement in this measure would place inappropriate burdens and liabilities on competent authorities with safety oversight responsibilities. In this respect CAA notes that there are no similar requirements in this NPA or NPA 2009-02 for other organisations to demonstrate to the safety authorities that they have sufficient financial resources.
- Proposed Text (if applicable):**  
**Delete sub-paragraph (b)**
- 
- comment 426 comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*
- Comment:
- ATO: Does this include all RF's according today's JAR-FCL? In this case this could become a heavy burden for small flying clubs as well as for the authority. RF's at present do not have to demonstrate sufficient financial resources.
- Proposal:
- In OR.ATO.010 should be clarified that RF's are excluded from this requirement.*

- comment 681 comment by: *Aero-Club of Switzerland*
- Nearly all gliding schools ins Switzerland are club-based ATO's.  
Proposal: Please add:
- (c) A non-commercial ATO may be managed by a club which is not a legal entity.
- Justification:
- Most gliding clubs in Switzerland work on a voluntary basis, and also the training is conducted on a voluntary basis. These clubs are organised in the form of club ("Verein"). Swiss law provides that a club may only be registered (as required by OR.ATO.010, lit a) in the commercial register if and when it operates commercially. This new requirement from OR.ATO.010, lit a) would thus force clubs in Switzerland to either not perform training anymore or to perform it commercially.
- 
- comment 696 comment by: *Maarten*
- What are sufficient financial resources? This is not clear. One euro or one million euros? Gives this the Authority a power means to close or refuse a ATO because no apparant resouces available? How are flying-clubs to do this? Is the qualification and the quality of the student pilot not the ultimate proof?? If you can't give a standard, scrap this section.
- 
- comment 844 comment by: *Frank Schweppe*
- The obligation to be a legal entity (thus, a registered company) seems over the top for BPL instructors who usually have a personal instructor's rating and give instruction on a part-time or even voluntary basis, taking on one or two students per year. The same goes for the financial resources. Habitually, in ballooning, students provide the aircraft (they bring their own balloon) and any additional equipment required; often the instructor travels to the location or area where the student is situated, bringing some personal items, logbook, paperwork and an overnight bag if training flights are planned during a weekend at a fair distance from the instructor's home. This requires very limited financial resources (basically, the students need the financial resources, not the instructor).  
I would suggest an exemption of a) and b) for single-person instructor 'organisations' for the BPL.
- 
- comment 847 comment by: *Aero-Club of Switzerland*
- OR.ATO.010 shows a lot of problems for non-commercial organisations.
- Proposal: Delete the requirements of OR.ATO.010 for all non-commercial organisations.
- 
- comment 1036 comment by: *Fédération Française Aéronautique*
- OR ATO 010 (b)  
Considering this rule completely unrealistic and not adapted to "Very small" (see our proposed definition in the FFA comment on NPA page 1 above), and for "Small organisations", FFA requests to delete this paragraph, or to keep it

only for "other/large organisations".

FFA points out that this rule is not directly safety related and goes beyond the scope of this NPA and the EASA remit.

comment 1043 comment by: *European Gliding Union (EGU)*

OR.ATO. 010 Financial resources (b)

The Approved Training Organisation (ATO) is required to prove it is financial sound.

We ask to delete this element.

In a sports club / federation environment this is an irrelevant request. Clubs /federations have to be financially sound in order to maintain their status according to most national laws in Europe. The financial management again is put into the hands of volunteers who are personally eligible for any fraud. The members are funding the planned activities of the club/federation and thereby very much involved in the day to day financial dealings.

comment 1079 comment by: *EUROPEAN GLIDING UNION*

OR.ATO. 010 Financial resources

In item (b), the ATO is requested to prove its financial status. In an air sports club/federation environment this request is irrelevant. Of course clubs/federations need adequate financial management but this is built up from a completely different approach than that required in a commercial organisation. Air sports club members fund the planned activities of the club/federation.

The Agency should not be concerned with 'consumer protection' through economic regulation as it is not within the scope of the Agency. Requiring financial resources to be adequate and verified for an ATO can only be interpreted as a 'consumer protection' measure, and is therefore unacceptable, particularly in the gliding and air sports worlds.

Proposal: Delete this requirement.

comment 1714 comment by: *Baden-Württembergischer Luftfahrtverband*

OR.ATO.010(a)

**Wording in the NPA**

(a) An ATO shall be an organisation or part of an organisation registered as a legal entity..

**Our proposal**

**Change:**

(a) An ATO shall be an organisation or part of an organisation registered as a legal entity **or a club.**

**Issue with current wording**

We can not tell if the notion "legal entity" covers clubs

**Rationale**

Most ATO for private pilot licenses and glider licenses in Germany are integrated into flying clubs. We can not tell if the notion "legal entity" used

here applies to clubs and therefore request clubs to be specifically mentioned.

comment 1715 comment by: *Baden-Württembergischer Luftfahrtverband*

OR.ATO.010(b)

**Wording in the NPA**

(b) An ATO shall demonstrate to the competent authority that sufficient financial resources are available to conduct training to the approved standards.

**Our proposal**

**Change:**

(b) A **commercially operated** ATO shall demonstrate to the competent authority that sufficient financial resources are available to conduct training to the approved standards.

**Issue with current wording**

This requirement does not apply to non commercial clubs.

**Rationale**

The financial situation of a club is based on the contributions of the members. Training is provided as needed by volunteer instructors. The ability to conduct training is not related to its financial resources. Commercial criteria can not be applied.

comment 1757 comment by: *Norwegian Air Sports Federation*

This is not applicable to aero clubs. OR.ATO.010 should be deleted or moved to section 2 where it might be relevant.

comment 1778 comment by: *Swiss Power Flight Union*

If EASA create a "Registered facility" for non-commercial flights, the demonstrate of "the sufficient financial resources" is not necessary.

comment 2290 comment by: *Light Aircraft Association of the Czech Republic*

This requirement (b) shows that EASA does not fully understand the nature of Sports and Recreational Environment. Most of the clubs are non-profit volunteer organisations and such requirements are absolutely not necessary and we strongly reject them. It is simply not possible to make income forecasts supported by statement of the bank as requested in AMC to OR.ATO.010(b) -see page 39. We do not see any reason for such excessive requests.

comment 2301 comment by: *Deutscher Aero Club Landesverband Niedersachsen*

**Wording in the NPA**

(b) An ATO shall demonstrate to the competent authority that sufficient financial resources are available to conduct training to the approved standards.

**Our proposal**

(b) A **commercially operated** ATO shall demonstrate to the competent authority that sufficient financial resources are available to conduct training to the approved standards.

**Issue with current wording**

This requirement does not apply to non commercial clubs.

**Rationale**

The financial situation of a club is based and ensured by the contributions of the members. Training and infrastructure is provided as needed and related to the number of students. Commercial criteria can not be applied.

OR.ATO. 010 Financial resources

In item (a) the ATO is required to be an organisation or part of an organisation registered as a legal entity.

Many air sports and recreational flying clubs are unincorporated members' clubs and as such, in several Member States, are not required to have a formal legal status under national law. Therefore EAS is concerned to understand the implications for clubs of this requirement and whether it will lead to the need for members' clubs in certain States to be reconstructed as 'legal entities'. If so there could be adverse consequences, in particular in relation to taxation, liability issues and administrative / compliance costs, of such imposed changes.

In item (b), the ATO is requested to prove its financial status.

The Agency should not be concerned with 'consumer protection' through economic regulation as it is not within the scope of the Agency. Requiring financial resources to be adequate and verified for an air sports ATO constitutes 'consumer protection', and is therefore totally unacceptable, particularly in the air sports world. Apart from this, the draft rules are intrusive and would create an unnecessary and unjustified burden on clubs, particularly the requirements in respect of banks' confirmation of facilities.

In an air sports club/federation environment this request is irrelevant. Of course clubs/federations need adequate financial management but this is built up from a completely different approach than that required in a commercial organisation. Air sports club members fund the planned activities of the club/federation.

Proposal:

Reconsider the need for registration as a 'legal entity'.

Essential to delete this requirement for financial monitoring and compliance.

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter

wohnen in der Regel gleichmäßig verteilt über Deutschland.  
Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 – 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Hauptverbot darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig

ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiflightführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberichter aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freiflightführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Freiflightbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Freiflightgruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportflarten / Flarten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini - ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.**

**Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglich sein.**

Comment

Large training organisations that have the privilege to conduct commercial air transport or an ATO having a specific arrangement with a commercial air transport operator could have a large fleet of aircraft from which to choose for aircraft training. Listing the registration details of all these aircraft and keeping it accurate will be administratively difficult.

Proposal

Such organisations are allowed to refer to the Airline's AOC approval (or equivalent) and the relevant fleet type as a means of satisfying the requirement in this Part.

(v) list of aircraft to be used for training, including their group, class or type, registration, owners and category of the certificate of airworthiness: A training organisation that has the privilege to conduct commercial air transport or an ATO having a specific arrangement with a commercial air transport operator may quote the Airline AOC reference number and state the relevant fleet.

comment by: *George Knight*

Again this rule has not been framed with small organisations in mind and not proportionate.

-(a)(1)(iii) Many gliding clubs have 40 or more volunteer instructors. As long as all instructors are appropriately qualified the authority only needs to know the details of the head of training (CFI). Having to notify the authority of every change of instructor or instructor's status is not a reasonable burden, is not proportionate and has no safety benefit.

comment

40

comment by: *George Knight*

-(a)(1)(iv) By their nature gliding clubs often mount expeditions to other gliding clubs, other airfields which are not gliding clubs or even to farmers' fields which are used for only a few days a year. It should only be necessary to provide details of the main airfield not all places that may be visited from time-to-time.

comment

41

comment by: *George Knight*

-(a)(1)(v) For gliding organisations training for non-professional licences it is common to borrow or hire-in aircraft from members, other clubs or the UK

BGA for short periods. This is particularly common when operating as guests from another club's site. The provision of a list of aircraft normally used should not preclude an ATO from using other aircraft on a temporary basis without the need to notify, or seek permission from, the authority.

comment 42 comment by: *George Knight*

-(b) For non-professional licences this should not be required.

comment 76 comment by: *ETPS CI*

**OR.ATO.015 Application**

*(a) Applicants for an initial approval shall provide the competent authority with:*

*(1) the following information:*

*(v) list of aircraft to be used for training, including their group, class or type, registration, owners and category of the certificate of airworthiness;*

**Comment 1** . ETPS utilises a pool of aircraft for the majority of its flying training and various visiting aircraft for a minority of its flying training. It would be impossible to provide registration and owner[S1]ship of all of the aircraft likely to be used on during training. It would be easier to specify a group/class/type with alternatives. ETPS will seek AMC under OR.GEN.020 of this document.

comment 97 comment by: *NFLC*

This refers only to initial approvals. Currently, PPL training within the UK can be conducted by 'Registered Facilities' which are flying clubs/schools which have supplied the information listed at OR.ATO.015 (a) (1) to the UK CAA but do not receive a formal 'approval'. What is the position for existing UK Registered Facilities? How will existing organisations providing training for PPL become 'approved'? The application form given at AMC to OR.ATO.015 appears to be for ATOs providing training for other than LPL, PPL, BPL, SPL in that there is a requirement for Operations and Training manuals and a note to say if the answers to all questions are incomplete then alternative arrangement must be provided. What are they?

comment 102 comment by: *DC-AL*

By their nature, aircraft often become unavailable, and organisations frequently need to be able to lease in replacements at short notice (for example a small organisation may only have one aircraft equipped for instrument qualification or stall spin avoidance training). It is impractical for such a small organisation to give notice to the Authority in advance of such temporary changes.

(a)(2) In our opinión the ATOs for LPL, PPL, BPL or SPL, having a training programme, should have an simplified training manual

comment 786 comment by: *David COURT*

(iv) excluding balloons as we do not normally use aerodromes.

comment 806 comment by: *ENAC TLP*

(a) (1) add:  
personal details and qualifications of the appointed HT  
personal details and qualifications of theoretical knowledge ground instructors

comment 852 comment by: *Frank Schweppe*

Under (iv) for the BPL, flights are not conducted from aerodromes, and may be conducted from various sites in various regions of the country, depending on availability, weather conditions etc. So I would add "except for balloon flights" or "except for BPL training".

Under (v), in balloon training the students usually provide their own equipment (complete balloons or envelopes, which they own or borrow), for the simple reason that balloons have very limited lifespan and voluntary instructors want to limit risk to their own equipment. So especially an individual single instructor will execute instruction flights using equipment that is not known long before the flights. Thus there will never be a full list available for the initial application. I suggest again to add "with the exception of BPL training" or, as under (2), "except for ATOs wishing to provide training for LPL(B) and BPL".

comment 922 comment by: *INAER*

**OR.ATO.015 (a) 2.**

Introduces requirements for training for" LPL, PPL, BPL, and SPL", but there is no previous definition for that names.

**Comment for (a) (2):**

There is a need for simplified operations and training manuals even for small organisations that provide training for LPL, PPL, BPL and SPL.

**Proposal for (a) (2):**

Amend point (2) the operations and training manuals. The operations and training manuals can be simplified for ATOs wishing to provide training for LPL, PPL, BPL and SPL.

**Comment for (a) (1) (i):**

Organisation number of the Training Organisation is missing

**Proposal for (a) (1) (i):**

Add organisation number, when available, in both places, (a) (1) (i) and in box no: 1

comment 1039 comment by: *Fédération Française Aéronautique*

OR ATO 015 (a) (1) (iv)

FFA strongly requests to delete item (iv), because all suitable aerodromes can be used for flight training in addition to the aerodrome where the organisation is based.

Moreover, the name of the aerodrome operator is not safety related information.

This item is over-prescriptive and should be merely deleted.

comment 1044 comment by: *Fédération Française Aéronautique*

OR ATO 015 (a) (2)

FFA strongly supports that this rule concerning the operations and training manuals shall not applied to "Very small" ATOs (see our proposed definition in the FFA comment on NPA page 1 above) which provide training for basic LPL, LPL, PPL, BPL and SPL, only.

If any, it should be specify which manuals shall be provided by the "Very small" and "Small" ATOs.

comment 1062 comment by: *CAA Belgium*

(a)(1)(ii)

Proposal: Change the words "of operations" into "of activity".

Reason: More general.

comment 1063 comment by: *CAA Belgium*

(a)(1)(iv)

Proposal: Delete "and the name of the aerodrome operator".

Reason: Is unnecessary information and such info, if really needed, should be AMC material.

comment 1127 comment by: *CAA Belgium*

(a)(1)(v) Add details of insurance certificates.

(a)(2) Organisation manual is required.

comment 1193 comment by: *DCAA*

(2)

There is a need for training manuals for all licences, also LPL, PPL, BPL and SPL.

If no training manual how shall the training then be conducted ?

comment 1652 comment by: CAA CZ

OR.ATO.015 (a)(1)(v), page 9

We recommend to add „details of aircraft insurance held“ (see Appendix 3 to JAR-FCL 1/2.125 para (h)):

(v) list of aircraft to be used for training, including their group, class or type, registration, owners and category of the certificate of airworthiness, **details of aircraft insurance held**;

comment 1653 comment by: CAA CZ

OR.ATO.015 (a)(2), page 9

Add missing "organization manual" (see page 7, OR.GEN.200(a)(6)) a „only“: (2) the **organization**, operations and training manuals, except for ATOs wishing to provide training for LPL, PPL, BPL and SPL **only**.

Otherwise, the organization, that provides CPL, ATPL, IR trainings, would not need to submit required manual to the authority.

comment 1687 comment by: Graham HALLETT

OR.ATO.015

Paragraph (a)1(iv). This is of course not applicable for balloons as they generally do not use aerodromes. Rather than include in the regulations a clause which was not applicable to a certain sector of aircraft, it would be simpler to preface this item with the words: "**(except balloons)**".

Paragraph(a) 1(v). Whilst an application must obviously include details of the aircraft types to be used, in the case of balloons (in particular, but applicable to other types), I cannot see any benefit to the Authority in providing the requested detail on individual aircraft to be used. A balloon is an extremely simple aircraft and, for the purposes of flight training, one is much like another. An organisation providing flight training in balloons, without owning its own aircraft but using the students own, or a leased/borrowed balloon, may provide training in a very large number of balloons. Although it might be possible to provide such a list at the time of application, it would almost certainly be out of date quickly and therefore of no benefit.

I would suggest this clause could be reworded as follows:

**'List of aircraft types to be used for training, including their group, class and category of the certificate of airworthiness;'**

Paragraph (b). It is not clear (to me) what changes to the organisation would constitute a change to the approval. Whilst a change to the aircraft type might reasonably constitute such a change, the replacement of one aircraft with a different one of the same type and specification must surely not. If it is intended that changes of individual aircraft within the same type would require a change to the approval, this is clearly an overly bureaucratic requirement and should be rejected immediately. However, if the changing of individual aircraft within specified types does not change the approval, then it is clear that there should be no need to provide information on individual aircraft owners or registrations on initial application.

comment 2094 comment by: Irish Aviation Authority

1) para (a)(1) - Add 'Aircraft Insurance Certificate'

2) para (a)(2) - ATOs providing training for LPL, PPL, BPL & SPL must provide a training manual - OR.ATO.125 requires a training program for each type of course provided, so this must be included in a training manual & submitted sw 280509

comment by: Svenska Ballongfederationen

OR.ATO.015 Application

(v) This paragraph is not applicable to a balloon training organisation and

should be removed for balloons.

For the balloon flight school operated by Svenska Ballongfederationen this would mean that we would have to list more or less all Swedish balloons and a lot of balloons registered in other countries as well. This is shown in the following paragraphs.

For a flight school training for example helicopter pilots (v) would work well since the flight school would normally own and operate just a few helicopters. A balloon flight school works in a different way. Here we will use a balloon owned, borrowed, or operated by the person in need of training, proficiency check, or any other services offered by the flight school. The flight school will not be the owner of the balloon that is used.

Almost all Swedish balloonists are organized in Svenska Ballongfederationen, SBF for short. SBF is the national non-profit balloon organization. SBF has through its flight school and training organization performed the main part of training for balloon certificates for thirty-five years.

SBF performs the main part of all training for new certificates, revalidation of expired certificates, proficiency checks, and training for extension of privileges to other balloon classes or groups. This means that we will have to list all balloons that might be needed to do this and as mentioned before these are all the balloons that are available to the persons seeking the services offered by the flight school.

NPA 2008-17 also suggests that LPL (B) and BPL certificate holders should perform a PC every six years which means that many more PC:s will need to be performed by the flight school than is the case today. This means that **all** certificate holders in Sweden will need to be able to use the services offered by SBF flight school and that **all** the balloons they might need to use must be listed.

This shows that all Swedish balloons and a lot of balloons registered in other countries as well will need to be listed in accordance with (v). This is not practical and creates a lot of unnecessary paperwork for both the flight school and the governing authority since new balloons will need to be added all the time.

comment by: *George Knight*

-(a) The HT (CFI) will be elected in most clubs not nominated.

response

*Noted*

Thank you for providing your opinion.

If a certain organisation is "electing" the Head of training before nominating him / her officially, this should not create any problem. In other specific cases there might not be an election before a nomination takes place. The term used "shall be nominated" seems to be the right expression for the action to be initiated by the training organisation and will therefore be kept.

 (a) A head of training (HT) ... add "acceptable to the authority"

comment 878 comment by: Boeing  
 OR.ATO.110  
 Para (b)  
 Page 9  
 Add “/or” after “appropriate knowledge and...” so that the text reads as follows:  
 “(b) Theoretical knowledge ground instructors shall have appropriate knowledge **and/or** experience in aviation.  
**JUSTIFICATION:** ATOs currently have many highly qualified ground instructors who know the aircraft and are qualified to teach ground school. There is no safety issue with qualifying a ground instructor who has no previous aviation background.

comment 879 comment by: Boeing  
 OR.ATO.110  
 Para (b)  
 page 9  
 It is not clear what is considered “appropriate knowledge” for theoretical knowledge ground instructors, or (2) how their capacity to teach it is proven We request that the text be revised to add clarification of these issues.  
**JUSTIFICATION:** Further clarification is needed to avoid subjective interpretation by competent authorities.

comment 880 comment by: Boeing  
 OR.ATO.110  
 Para (c)  
 Page 10  
 We would agree with this proposed requirement if Boeing’s comments submitted to NPA 2008-17b, Part-FCL, paragraph FCL.900, “Instructor Certificates,” are accepted, and the requirements are revised to include licenses issued in accordance with ICAO Annex 1 or equivalent ICAO Member State instructor authority.  
 [NOTE: Our comments to NPA 2008-17b requested that a new subparagraph FCL.900(a)(1)(iii) be added that states:  
 “(iii) or is an instructor employed by a manufacturer or a manufacturer’s ATO, in which case an ICAO-accepted license, type rating, and instructor authorization is required without further satisfying (i) and (ii).”]  
**JUSTIFICATION:** As written, the proposal will be too restrictive to ATOs, as the quality of the simulator instructor for type ratings is not dependent on the

country of license issue, but rather the knowledge specific to the aircraft type being taught and the instructional ability of the individual.

comment 1045 comment by: *Fédération Française Aéronautique*

OR ATO 110 (c)

FFA recommends changing the word "qualifications" into the word "certificates", to be in compliance with the Part FCL terminology.

comment 1159 comment by: *Dassault Aviation*

OR ATO 110

We suggest to add :

(b) A person or group of persons shall be nominated with the responsibility of Change management process and Change notification processes

(c) A person shall be nominated with the responsibility of the Standardization processes

(b) becomes (d)

(c) becomes (e)

At the end of the paragraph "*Theoretical knowledge ground instructors shall have appropriate knowledge and experience in aviation*", we propose to add "and receive a standardized training, including efficient and pedagogical use of all training material"

### **Explanation**

An initial course being approved, it is paramount that:

- An efficient standardization control process be in place to ensure that a same course is being taught in the same manner by the different instructors in the different centers,
- An efficient Change Management Process be in place to maintain the course up-to-date in flow with aircraft, documentation or regulatory relevant evolutions,
- An approved Change Notification Process be in place with agreed criteria defining
  - When the authority must be informed of changes
  - When a new approval of the course from the authority should be expected

Additionally, in order for the instructors to deliver efficiently the approved training, they should have pedagogical knowledge and know how to efficiently use the training materials (slides, FFS, CPT or other material)

comment 1325 comment by: *Irish Aviation Authority*

The head of training should be acceptable to the CA. (a) should therefore read:

(a) A Head of Training (HT), acceptable to the competent authority, shall be nominated.

comment 1756 comment by: *Aero-Club of Switzerland*

To (b): Please replace the term "ground instructor" by something else:

Proposal: Just call them "instructors" or "lecturers" or "teachers"

Justification: There are always duties or topics to be instructed on ground by flight instructors. A strict differentiation is not necessary

comment 2126 comment by: *CAA Norway*

OR.ATO.110(a)

There should be provision that the Head of Training should be acceptable to the authority.

comment 2304 comment by: *Deutscher Aero Club Landesverband Niedersachsen*

**Wording in the NPA**

(a) A Head of Training (HT) shall be nominated. The HT's responsibilities shall include ensuring that the training provided is in compliance with PartFCL requirements.

**Our proposal**

(a) A Head of Training (HT) **and optionally additional members of a head of training team** shall be nominated. The HT's responsibilities shall include ensuring that the training provided is in compliance with PartFCL requirements.

**Issue with current wording**

In case of performance of training courses on multiple types of aircraft there may be a second level of head of training necessary for the different types of training.

**Rationale**

If multiple courses on different categories of aircraft are offered then there may be a second level of heads of training responsible for these different courses. They should have the option to handle the required formalities for their area of responsibility directly with the competent authority and should therefore also be nominated.

comment 2391 comment by: *FlightSafety International*

Flight instructors and flight simulation training instructors seeking to instruct for a Part FCL license shall hold at least at least the license and ratings issued in accordance with ICAO annex I required by the respective non-EASA state for the instruction to be given; comply with experience requirements \_\_\_\_; have completed as a Type rating instructor at least 100hours of flight or simulator instruction time; validity period of the authorization will not exceed 3 years; complied with revalidation requirements of Part FCL.

There is no safety issue with the current situation and type training should not depend on the instructor or the examiner from having a EASA issued licence.

This is accepted if the comments specified for Part FCL 900(b)(3) are accepted

and the requirements are altered to include licences issued in accordance with ICAO Annex 1 or equivalent ICAO member state instructor authority as identified in comments posted (to Part FCL).

This will be too restrictive to organizations as the quality of the simulator instructor for type ratings is not dependent upon the country of licence issue but rather the knowledge specific to the aircraft type being taught and the instructional ability of the individual.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 1 -  
OR.ATO.120 Record keeping**

p. 10

comment 44

comment by: *George Knight*

-(a) The requirements here are appropriate to ATOs training for professional licences. It is disproportionate for ATOs training for recreational licences. For example gliding clubs give trial lessons to many students over a year. Less than 5% will continue their training to solo standard – even fewer will ever attain a licence. Being required to keep the proposed records for all these dropouts for 5 years is an unreasonable burden.

The normal practice at a gliding clubs, which works really well, is to issue each student with a Log Book and a Progress Card that lists all the exercises in the syllabus. These documents are completed/updated at the end of each training detail and retained by the student. Because a gliding instructor will usually start the detail with the next student without leaving the launch-point these documents are frequently updated out on the airfield – not in an office. This approach works particularly well whilst training students on winch launch failures where each flight is a series may last only a minute or so.

The above mean that an instructor may teach multiple students in a session without returning to an office. Attempting to maintain the detailed records proposed in club documents at the launch-point of a windy airfield is not sensible. For small ATOs the instructor should be permitted to update records that are retained by the student. For non-professional gliding licences the student should be responsible for looking after the records – not the club (ATO).

For students the club need only keep records of:

- Each flight that has taken place, crew, launch method and duration.
- Results of students' examinations and assessments.
- Licences and medical certificates held with expiry dates.

comment by: *UK CAA*

**Page No:**  
10 of 83

**Paragraph No:** OR.ATO.120 (b)

**Comment:**

The requirements listed in (b)(3) which defines records to be kept are open to interpretation to mean as little as simply the evaluation reports, which is

inadequate to determine the status of a device or provide useful history. It would be beneficial to require retention of Compliance Monitoring System records (e.g. defect rectification, regular QTG runs) specific to the FSTDs.

**Justification:**

The ongoing status records form an important element of record keeping for a simulator allowing, for example, an assessment of stability when considering allowing recurrences to be undertaken by the simulator operator and providing evidence of improvement or degradation in performance which is required to be monitored by the CMS.

**Proposed Text (if applicable):**

1. Add new item OR.ATO.120 (b)(4)

(4) Compliance Monitoring System Records defining the current status of each FSTD

2. Add new AMC to OR.ATO.120 (b)

The compliance monitoring records should include as a minimum, the following:

- a) The Master QTG
- b) The regular QTG objective test runs and Function and subjective flyout results
- c) The defect reports, investigation records and closure actions
- d) Records defining the ongoing configuration of each FSTD

comment

430

comment by: *FlightSafety International*

**Comment:** The requirement to keep the named records "for as long as the FSTD is in use" is an increase in requirements from the current FSTD A requirement to keep the same records for 5 years

**Proposal:** Change the requirement to state "the following records shall be kept for a minimum of 5 years:"

**Impact to FlightSafety:** The increased burden of maintaining these records for as long as the FSTD is in use could require records storage for 20 or more years, resulting in a huge financial burden and environmental impact.

comment

comment by: *Fédération Française Aéronautique*

OR ATO 120 (a)

FFA understands the need for keeping records but requests that, for "Very small" (see our proposed definition in the FFA comment on NPA page 1 above) and "Small" ATOs, and to avoid unnecessary burden, the period extends two years (instead of five) after the completion of the student's training or the student's departure.

- comment 1050 comment by: *Fédération Française Aéronautique*
- OR ATO 120 (a) (3)  
FFA disagrees with this rule, requiring the ATOs to keep records related to the students' medical certificates.
- The rule is not consistent with Part FCL which clearly distinguishes ATOs and AeMCs.  
Data relevant to medical are not relevant to ATOs. So, FFA requests to delete the words "including the expiry dates of medical certificates and ratings".
- comment 1051 comment by: *Fédération Française Aéronautique*
- OR ATO 120 (a) (3)  
FFA suggests changing the word "qualifications" into the words "ratings, certificates and qualifications" so as to comply with the Part FCL."

- OR.ATO.120(a)  
**Wording in the NPA**  
(a) The following records shall be kept for a period of at least 5 years:  
(1) details of ground, flying, and simulated flight training given to individual students;  
(2) detailed and regular progress reports from instructors including assessments, and regular progress flight tests and ground examinations
- Our proposal**  
**Change:**  
(1) progress report as specified in the approved training programme (see OR.ATO.125) including completed training units and assessments.  
(2) <delete>
- Issue with current wording**  
Too much repeated or unnecessary documentation
- Rationale**  
The documentation should be aim oriented and not repeat else ware documented information. Flights are already documented in the various log books, there is no need to repeat this information. Important is to keep track of the progress of the student. For each course a training plan exists this can be used appropriately formatted to document the students progress. This should be sufficient documentation. The detail should correspond to the complexity of the course. An example is the form to document the training and examination for a class rating. This should be sufficient documentation for this course.

 -(a) Suggest that an ATO should be permitted to use a published syllabus and not have to develop its own.

comment 88 comment by: *James Carrie*  
 Why is it necessary for each ATO to develop their own training program. Why does EASA not just publish the syllabus?

comment 127 comment by: *DCA Malta*  
**OR.ATO.125**  
 Add requirement for the training programme to be approved by the competent authority.

comment 220 comment by: *ECA- European Cockpit Association*  
 References to PART-21 were found many times in the document without explanation of what Part-21 means exactly. Nowadays, Part 21 does not contain anything related to these cross-references, as the 21.039 WG has not finished the rulemaking task yet. Therefore, ECA cannot agree on a text that leaves to or refers to requirements that currently are not in the regulation, as this then means the requirement is none. Unless Part 21 is finished with clear cross-references, any license related requirement should stay in Part FCL.

comment 223 comment by: *ECA- European Cockpit Association*  
 Comment on paragraph (a):  
 (a) A training programme shall be developed for each type of course offered.  
 The text "a training programme shall be developed" is unclear. EASA should provide sample syllabuses for ATOs to follow.

comment 287 comment by: *Susana Nogueira*

2152

comment by: DGAC FRANCE

**OR.ATO.125 Training programme**

Comment :

DGAC france is currently reviewing the NPA2009-01 on the OSC concept and its implication. It raises questions on what is applicable for the end users, i.e. training organisation, operators, maintenance organisations for all aspects of OSC.

The expression "shall be based on" is raising the question of which flexibility is allowed or which interpretation of OSC contents will be possible. None of us have yet the knowledge of what will be the typical contents of the OSC, the CS associated to the OSC. Currently, some OSC parts such as MMEL is very formalized for large aircraft and we do not expect difficulties. But the subject for smaller aircraft used for general aviation is different. Therefore, DGAC France is cautious about the constraints that are going to be put on all type of aircraft by such rules. Certainly, this question will be widely discussed again for all matters within NPA 2009-01. NPA2009-02, previous NPA 2008-17 would be as well impacted.

Therefore we propose a different wording which seems less restrictive to us. Certainly, a similar wording should be retained for all matters in the various implementing rules.

**We propose the following change :**

(b) In the case of type rating courses, the training programme ~~shall be based on~~ **is developed using** the training syllabus for the aircraft type ~~as approved~~ **as established** in accordance with Part 21.

comment by: FAA

**OR.ATO.125 Training programme (b)** Does the reference to Part 21 refer to the training program contained in the OSC? If so, neither the OR.ATO nor the AMC material directly state that the OSC is the source document for the development of the training program.

**Recommendation:** A specific reference to the use of the OSC as the source document for the development of the operator's training program and syllabus should be made in the OR.ATO and AMC material.

comment by: RAeS ICFO

To facilitate the adoption future ICAO criteria for FSTDs the use of specific description for types of training devices should be avoided in this section.

para (b) is very specific and therefore should be moved to an AMC to AR.ATO.125

comment 288 comment by: *Susana Nogueira*  
 (b) Change 'helicopter' by 'aircraft'  
 What is the reason to limit this credit only for helicopters?

comment 336 comment by: *UK CAA*  
**Page No:**  
 10 of 83  
**Paragraph No:** OR.ATO.130(b)  
**Comment:** It is not easy to determine the intent of this paragraph, particularly as the term 'flight simulator' is not defined in the implementing rules. Also, the significance of 'visual' training is not understood.  
**Justification:** Clarification  
**Proposed Text (if applicable):**  
 If a full flight simulator is used for training that represents a different type from the helicopter that is used for the skill test, the maximum credit shall be limited to that allocated for an FNPTII/III in the relevant flight training programme".

comment 702 comment by: *DGAC FRANCE*  
**OR ATO 130**  
 paragraph (b) : the word "helicopter" should be replaced with the word "aircraft"

comment 788 comment by: *David COURT*  
 An ATO for balloons does not normally provide a fleet of aircraft in the same way that a gliding school or fixed wing training organisation does.

comment 1019 comment by: *Irish Aviation Authority*  
 1. Suggest that under (b) 'helicopter' is replaced by 'aircraft' otherwise the scope of this paragraph will be lost.  
 2. A third paragraph (c) should be added to include the requirement for a FSTD User Approval. See CSFSTD(A) BOOK 1

**SUBPART B TERMINOLOGY**  
**CS-FSTD(A).200 Terminology**

**(g)**

***Flight Simulation Training Device User Approval (FSTD User Approval).***

This is alluded to in OR.ATO.300 General (b).

OR.ATO.130(b)

Why is this limited to helicopters? We assume the word "helicopter" should be changed to "aircraft"

comment 2256 comment by: CAE

FNPT II/III is used in various places through this part, however only FNPT I, II and II MCC standards are applicable.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 1 -  
 OR.ATO.135 Aerodromes**

p. 10

comment 85 comment by: phil mathews

OR.ATO.135 Any suitable airfield should be available for flying training, not just licensed airfields. Also legislation should not limit flying training to airfields equipped with radio. There should be scope for students to experience a non-radio environment.

comment 89 comment by: James Carrie

Why is there a requirement to conduct flight training at an aerodrome?

Theoretical Knowledge can be taught anywhere? Flight Instructors should be allowed to teach in colleges, universities, hotel rooms or anywhere with adequate facilities,... private room in a pub!

comment 222 comment by: *ECA- European Cockpit Association*

Comment: change paragraph as follows:

**When providing flight training, an** ATO shall use aerodromes or operating sites that have the appropriate facilities and characteristics to allow training of the manoeuvres relevant, taking into account the training provided and the category and type of aircraft used.

Justification:

The proposed text clarifies the text. An ATO providing only simulator or theoretical knowledge training shall not be required to operate on an aerodrome or operational site.

comment 682 comment by: *Aero-Club of Switzerland*

We fully agree: "...the appropriate facilities...", but we fully disagree with what you ask for later: ATC services need not to be in place in all cases as you want them to be in the AMC to OR.ATO.135 1.d.

Justification: The Agency is fully right if it thinks of ATPL/CPL/IR, but to have ATC services in place for LPL/PPL/BPL/SPL and so on this requirement need not to be fulfilled.

comment 698 comment by: *Maarten*

What are "...appropriate facilities and characteristics....".....".....to allow training of manoeuvres relevant.....". Definitions completely unclear. Has there to be a coffee machine, outside ashtrays? Unclear definitions are a reason for Authority to stop flying for unclear reasons. The only request could be that there is a runway. Unclear, so scrap.

comment 812 comment by: *Light Aircraft Association UK*

The LAA notes that this requirement does not proscribe the use of licensed aerodromes. The LAA considers this to be a positive move.

comment 1049 comment by: *European Gliding Union (EGU)*

AMC OR.ATO.135 Aerodromes

Again, this can only apply to commercially operating sides. Our clubs operate from sides owned by themselves or rented. The sides are often grass strips or very short concrete runways which according to the new European legislation do not fall under EASA regulation.

The requirement under d) to have an air traffic control service, is completely missing the point of training VFR pilots for GA and air sports activities.

Recommendation: delete this requirement.

- comment 1053 comment by: *Fédération Française Aéronautique*  
 FFA understands the need for using appropriate aerodromes, but fully disagrees with the *AMC to this rule*, which requires that all the facilities should be available on all aerodromes used for the training and at all times. (See FFA comment on "AMC to OR.ATO.135", NPA page 48)
- comment 1784 comment by: *Swiss Power Flight Union*  
 We are fully disagree with what you ask for later: ATC services need not to be in place in all cases as you want them to be in the AMC to OR.ATO.135 1.d.
- comment 2066 comment by: *Avinor AS*  
 The spesification of aerodrome facilities under this item seems incidental and may have more relevance in aerodrome specific regulations since such activities fall under the responsibility og the accountable airport manager.
- comment 2291 comment by: *Light Aircraft Association of the Czech Republic*  
 Requirements stated in the AMC to OR.ATO.135 1(d) which require air traffic control service at the home base aerodrome are not acceptable for training organisations for LPL.  
 The requirement would in practice make most of todays flight training impossible in the mentioned licence categories.  
 Proposal:  
 remove requirement 1d from AMC.  
 If necessary add  
 4. Air traffic control requirements to be considered

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 1 - OR.ATO.140 Pre-requisites for training**

p. 10

- comment 221 comment by: *ECA- European Cockpit Association*  
 Comment: change text as follows:  
**(a) The approved training organisation shall establish entrance requirements for students in their procedures. The entrance requirements shall ensure that the students have enough knowledge, particularly of physics and mathematics, to be able to follow the courses.**  
**(b) The** ~~An~~ The ATO shall ensure that the students meet all the prerequisites for training established in Part-FCL.  
 Justification:  
 This requirement from JAA has been taken out of the entry requirements for the professional courses for pilot's licenses. It was in the FCL.001 proposal, and there is no safety justification to delete it.  
 Not only that EASA does not take into account the IFALPA policies based on best practices and safety standards, for the selection of candidates for pilot training (which were given to the Agency by ECA on the drafting period), but it

also doesn't take its own expert group proposals by deleting the only requirement that was in the regulation for selection process. This is an unacceptable proposal, as any training program must be based on the characteristics of the population to be trained. Not taking into account who we are going to trained, or based on the training program, not selecting the candidates that will fit the program will lead to failures to pass/end the training. With this, an economical assessment on the individuals economy waste must be done, or a "below the standards" outcome may be expected, just because no entry requirements are set.

comment 1655

comment by: CAA CZ

OR.ATO.140, page 10

We recommend to add also "Part Medical":

An ATO shall ensure that the students meet all the pre-requisites for training established in Part FCL **and in Part Medical**.

comment 2090

comment by: Airbus

NPA 2009-01, on Operational Suitability Certificate, proposes a requirement for OEMs, under Part 21 Subpart C, to provide the minimum training syllabus. If this requirement is adopted, OR. ATO.140 should in addition make reference to possible pre-requisites established in the training syllabus issued under the Operational Suitability Certificate.

**Proposed wording:**

An ATO shall ensure that the students meet all the pre-requisites for training established in Part FCL, and the ones associated to the training syllabi as defined in the Operational Suitability Certificate issued under Part 21 if applicable.

Insert new requirement:

**OR.ATO.200: All Synthetic Training Devices (STD), such as Flight Simulators or Flight Training Devices (FTD), replacing an aeroplane for training and/or checking purposes are to be qualified in accordance with the requirements applicable to synthetic training devices. An ATO intending to use such STD must obtain approval from the Authority.**

Justification:

Paragraph missing. There is no requirement for an ATO to obtain approval of an FSTD (EU-OPS 1.005 d resp JAR-OPS 1.005 e)

comment 290

comment by: *Susana Nogueira*

This section is a mix of JAR-FCL requirements for ATOs and TRTOs.  
Text must be reviewed completely.  
The rule is too binding.  
Some oparts might be placed in AMC

Probably the best solution is to divide, as in JAR-FCL, between FTOs and TRTOs. The requirement are not the same.

comment 1054

comment by: *Fédération Française Aéronautique*

Section 2.

FFA fully supports that the rules concerning ATOs shall be proportionate to the type of activities.

FFA fully supports that the rules contained under this section, shall not be applicable to "Very small ATOs" (see our proposed definition in the FFA comment on NPA page 1 above, namely, ATOs providing training for basic LPL, LPL, PPL, BPL and SPL) and "Small" ATOs.

comment 1056

comment by: *Fédération Française Aéronautique*

Section 2 title :

FFA requests that the words "basic LPL" are inserted in the title of this section after the words "other than".

comment 1312

comment by: *Irish Aviation Authority*

The whole of this section does not seem to take into account what currently happens in a TRTO. In most TRTO's, especially those associated with an airline, there is no requirement for a CFI or CGI.

Many existing Heads of Training in a TRTO have no experience as a flight instructor, but only as a TRI / TRE and is usually a Senior TRE.

Provision should be made for these circumstances.

DCr 270509

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 2 -  
OR.ATO.210 Personnel requirements**

p. 11

comment

79

comment by: *ETPS CI*

AMC 2 to OR.ATO.210 Personnel requirements

1. *Head of Training (HT). The nominated HT should hold or have held in the three years prior to first appointment as an HT, a professional pilot licence and associated ratings issued in accordance with PartFCL, related to the flying training courses conducted.*

2. *Chief Flying Instructor (CFI). The CFI should:*

*(i) hold the highest professional pilot licence and the ratings related to the flying training courses conducted;*

**Comment 4** : ETPS currently flies and instructs under military rules. Instructors are rigorously monitored and examined but do not necessarily hold civilian licenses. ETPS would seek an AMC under OR.GEN.020 of this document, i.e. an acceptance of UK MOD regulation equivalence which would lead to ETPS becoming an EASA "accepted flight test training organisation".

Justification: If the ATO provide only tjeoretical knowledge not need CFI.

comment

128

comment by: *DCA Malta*

**OR.ATO.210**

This section has to be reworeded to clarify the different requirements, which are

now clear in JAR-FCL, for what are now FTO, TRTO, and FTO for Theoretical Knowledge only.

In particular:

**OR.ATO.210 (a) (2)**

**Proposal:** Replace 'have extensive experience in training as a flight instructor for professional pilot licences and possess a sound managerial capability'

By

'possess a sound managerial capability and if the ATO provides flight instruction he shall have extensive experience in training as a flight instructor'

**Reason:** In the case of an ATO providing only modular theoretical knowledge instruction it is not necessary for the Head of Training to have experience as a flight instructor.

Also: Today a FTO providing modular theoretical instruction only, say for the modular ATPL(A) theory, does not need to have a HT having extensive experience in training as a flight instructor for professional pilot licences, (JAR-FCL Appendix 1a to JAR-FCL 1.055 para 11 states - At FTOs conducting theoretical instruction only, the positions of HT and CGI may be combined. The nominated person shall have a sound managerial capability and shall meet the requirements set out in paragraph 19

'JAR-FCL Appendix 1a to JAR-FCL 1.055 para 19- The CGI shall have a practical background in aviation and have undergone a course of training in instructional techniques or have had extensive experience in giving theoretical ground instruction.'

Also:

**OR.ATO.210 (b)**

**Proposal:** Replace 'The ATO shall nominate a CFI '

By

'An ATO providing flight instruction shall nominate a CFI'

**Reason:** If the ATO provides only theoretical instruction there is no need for a CFI.

comment

225

comment by: *ECA- European Cockpit Association*

Comment on paragraph (a)(2):

Add an IR. This is the minimum to have recognition from instructors and a adequate global overview of the training, necessary for this position in an ATO.

comment

226

comment by: *ECA- European Cockpit Association*

Comment on paragraph (b): change text as follows:

(b) Chief Flying Instructor (CFI). The ATO shall nominate a CFI that shall be responsible for the supervision of flight and synthetic flight instructors and for the standardisation of all flight instruction and synthetic flight instruction. The

CFI shall hold an instructor certificate with the privilege to instruct for at least one of the training courses provided **and including IR and MCC when instructed.**

Justification:

IR and MCC trainings are essential milestones for the training of an applicant, so the head of training is required to have experience on both these trainings. Moreover, standardisation in IR and MCC requires the person in charge to be qualified accordingly.

comment 227 comment by: ECA- European Cockpit Association

Comment on paragraph (c):  
Clarification is needed.

comment 337 comment by: UK CAA

**Page No:**  
11 of 83

**Paragraph No:** OR.ATO.210

**Comment:** Requirement for the nominated Head of Training to have extensive experience in training as a flight instructor for professional pilot licences is appropriate only for an ATO training for professional licences. This FI experience is unnecessary for the Head of Training of a Type Rating or theoretical knowledge training organisation and may not be achievable in this case.

**Justification:** Removal of overly restrictive requirement.

**Proposed Text (if applicable):**

Paragraph (a)(2) Delete "flight"

comment 382 comment by: OAA Oxford

Where a Group of Company's has a centralised Head of Training, and / or CGI ATOs in other Member States may require only a CFI role

comment 431 comment by: FlightSafety International

**Comment:** Since it is not defined or quantified in any document, the use of the word "extensive" is open to subjective opinion.

**Proposal:** Delete the word "extensive" in sections (a) and (c)

**Impact to FlightSafety:** The experience level of the HoT would be evaluated during the determination of his/her acceptability to the Authority. The required experience level of the CGI should not have to exceed the experience level of the CFI, who is not required to have "extensive" experience.

comment 486 comment by: Márcia Nunes

New regulations in force appear to have abandoned the use of the terms "synthetic flight training" and "synthetic flight instructors".

Instead shouldn't these be respectively replaced by:

"simulated flight training" and flight simulation training instructors"?

Comments concerning ballooning:

(1) and (2) as the FCL rules seem to exclude professional licences for balloon pilots (and non-motorized operations have been deemed not to be 'commercial air transport' by the European Commission in 2008), a ballooning instructor or head of training can not have extensive experience in training as a flight instructor for professional pilot licences. This would imply that a head of training (i.e. in single-person instructor situations, the instructor himself) must be a commercial fixed-wing instructor. This is obviously not necessary (I would say nonsense) for ballooning operations.

I would add: "With the exemption of ATOs wishing to engage in instruction for non-motorized forms of flight, such as LPL(B), BPL and SPL, the HT shall:....

OR.ATO.210 (b) Chief Flying Instructor

We do not agree with your view on this subject. You can have ATOs that just specialise in theoretical training. In that case there is no need for a Chief Flying Instructor. We suggest that you add to this paragraph:

"A CFI need not to be nominated for an ATO that specialises in theoretical training and have no flight training"

comment

1002

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

What are the requirements for ATOs providing theoretical knowledge instruction only? Are they required to have a CFI?

**Proposal:**

Insert paragraph that excludes above mentioned ATOs from the requirement of having a Chief Flying Instructor.

**Comment:**

Point (a)(2) HT. For how long time shall, before appointment, extensive experience be counted? We suggest that the text from JAR-FCL 1 is used.

Point (b) CFI. Does the requirement imply that only an instructor certificate is needed in order to become a CFI? Shouldn't there be any requirements for flight experience (flight time) as a flight instructor before becoming a CFI?

The text in AMC 1 to OR.ATO.210 is explaining the experience for both HT and CFI.

**Proposal:**

Suggest that the text in AMC 1, OR.ATO.210, is moved to OR.ATO.210.

Point (a)(2). The nominated HT should hold or have held, during three years prior to the first appointment as a HT, a professional pilot licence and associated ratings issued in accordance with Part-FCL related to the flying training courses conducted.

Point (b)

(i) hold the highest professional pilot licence and the ratings related to the

flying training courses conducted;

(ii) have completed 1000 hours of flight time as pilot-in-command of which at least 500 hours shall be on flying instructional duties related to the flying courses conducted, of which 200 hours may be instrument ground time.

Cannot include the word extensive (as used in section (a) (2)) to describe experience in a regulation. Therefore **extensive** should be removed and any clarity on the matter should be added to the AMC or GM.

comment 1656 comment by: CAA CZ

OR.ATO.210 (b), page 11

The CFI shall hold an instructor certificate with the privilege to instruct for **at least one** of the training courses provided.

The requirement should be added that he must have experience in the provision of all types of trainings, which ATO applies for. It is unable to reduce the CFI requirements significantly because it implies that almost every instructor can have his ATO then, for almost all courses. Number of ATOs will grow enormously and the quality of training will significantly decrease. Each ATO will be allowed to have for example, only 1 training. And competent authority shall ensure supervision of all ATOs, regardless of the number of training conducted for 24 months. In Czech Republic there is already registered 140 facilities and 20 FTO. The increase in the number of FTO was prevented so far by the requirement for CFI, which had to have 500 hours in training related to the courses provided. Interpretation was - applicable to all trainings that he is applying for. Furthermore, the requirement for the number of hours needed for the nomination CFI moved to AMC, where it is able to use "should" instead of "shall".

comment 1760 comment by: Aero-Club of Switzerland

Please delete the term Chief Ground Instructor.

Justification: We think, in most of the cases the training in ground will be given by flight instructors. A strict separation of the directly flight related instruction from instruction to be given on ground is not necessary. There is no need to "over-organise" an ATO.

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)

2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.

3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden.

Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Hauptverbot darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiflightführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberichter aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:

Es sollte eine AMC für 'Mini - ATO's für Freiflightführer BPL/LPL(B)' geben.

Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.

Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manualls' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von Small Organisations.

Im Freiflightbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Freiflightgruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfliegen / Fliegen im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini - ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.

Letter (e): "...in accordance with Subpart OPS": Subpart OPS of what?

comment 224 comment by: *ECA- European Cockpit Association*  
Comment on paragraph (e):  
Clarification is required on what is the type of operations of an ATO. Depending on the type of operation, various FTL schemes may appear in various CSs. Specific CSs should be developed to regulate the instructional activities.

comment 338 comment by: *UK CAA*  
**Page No:**  
11 of 83  
**Paragraph No:** OR.ATO.230(c)  
**Comment:** Specifies the format of an ATO training manual in four separate parts. This is from JAR-FCL but has been found to be cumbersome when an organisation conducts a variety of courses, especially TRTO courses where one organisation provides multiple type rating training. An individual document is required for each course while many aspects are common.  
**Justification:** Commonality with requirements for Operations Manual in subparagraph (d).  
**Proposed Text (if applicable):**  
Amend paragraph (c) to replace "following parts" and the bullets to read:  
"training plan, briefings and air exercises and synthetic training as appropriate and theoretical knowledge instruction."

comment 601 comment by: *Heliswiss AG, Belp*  
OR.ATO.230 (e)  
For flight time limitations, 4 possibilities of operations for a flight instructor exist:  
1. Full time instructor with no commercial flying  
2. Full time instructor with commercial flying  
3. Part time instructor with no commercial flying

## 4. Part time instructor with commercial flying

In case of commercial flying, the duty and rest times of Subpart OPS have to be respected. Due to the completely different operation and the related stress it should be possible to deviate from OPS requirements if the instructor does only instruction or is a part time instructor.

Proposition: erase "in accordance with Subpart OPS".

comment by: *Irish Aviation Authority*

1. In (a)(1), is the word 'installation' being used as a gerund - i.e. "the act or an instance of installing" - or as the pure noun - i.e. "a piece of apparatus, a machine, etc. installed" - or both? If it is the former, it will be relatively straightforward for an ATO to control through contract, but if it is the latter, it will be almost impossible for an ATO, which is using the device of a third party, to comply with this rule.

2. In (b), is the 'approval' the FSTD User Approval, or the ATO approval. Normally the FSTD specifications are listed only on the Qualification Certificate, and on the User Approval only the user's requirements are listed, subject to continued qualification of the device. It would be a waste of time to list all the specifications of every FSTD that an ATO uses on the ATO approval, especially if the ATO was not authorised to use some of the capabilities of the device. For example, the device is capable of Cat IIIb, but the ATO only has approval for Cat I, as is covered in (a)(2).

The FSTD specifications are well documented elsewhere and therefore (b) is redundant and should be removed to avoid confusion. Some of this confusion will arise because some ATO's will operate and provide training in a device or devices, but, because of these rules, an organisation which operates simulators but does not itself provide training, will also have to be an ATO.

comment 2384

comment by: FAA

**OR.ATO.300 General** It is unclear for a simulator outside of an EASA member state that is operated by a party that does not provide training, but only dry leases the FAA approved simulators to several different EASA member state air carriers who would be required to comply with these organizational requirements. An example of this would be the dry leasing by United Airlines a B777 simulator to Air France for Air France to conduct training under their French DGAC and to British Airways under their approved training program to conduct training. In this example it is unlikely that United Airlines would have a desire to go through the entire process necessary for an EASA ATO approval and who and how would the two different air carriers comply with this requirement. This could lead to the reduction of otherwise qualified full flight simulators being available to EASA member state air carriers to conduct high value training. This could have a negative safety impact for the EASA member state air carriers.

**Recommendation:** Develop a methodology to address this scenario or a similar type of simulator dry lease arrangement.

343

comment by: UK CAA

**Page No:**

Page 12 of 83

**Paragraph No:** OR.ATO.305 (c)**Comment:**

The reason why a configuration management system is essential is not clear or understood. Propose that this paragraph be clarified.

**Justification:**

To ensure the "continued integrity" of the FSTD is a term that needs to be explained in AMC or the IR needs to be clarified because there is no consistent means to determine compliance to this text. It is offered that the need for configuration management is to ensure that the device continues to replicate a known aircraft, or that differences in configuration between simulator and specific aircraft can be identified for training purposes. The proposed revised text allows compliance to be established.

**Proposed Text (if applicable):**

Amend OR.ATO.305(c) to read (proposed amendments italicised and underlined)

(c) A configuration control system shall be established to define the configuration standard of each device at any time during its life.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 3 -  
Chapter 1 - OR.ATO.320 Additional equipment**

p. 13

comment

345

comment by: UK CAA

**Page No:**

13 of 83

**Paragraph No:** OR.ATO. 320

**Comment:**

There is a concern about the introduction of new and novel features as "additional equipment" where there are no requirements to assess if the feature adversely affects training. An example might be the recent developments in motion seats or the "upset recovery" functions on some simulators. There is a need to establish what to do if there is no basis for making a judgement about the effect on training (restrict use of the feature perhaps) or provide guidance in a new AMC.

**Justification:**

Where additional equipment may be new, novel or may cause the simulator to behave outside the normal envelope the simulator evaluation team, as identified in Part AR of a competent authority, may not be in a position to make the judgement.

**Proposed Text (if applicable):**

Guidance material needed in Part OR and/or Part AR

comment

433

comment by: FlightSafety International

**Comment**

The statement "Where additional equipment has been added to the FSTD" is entirely too broad in scope.

**Proposal**

Change the statement to read: " Where additional equipment which affects the manner in which training is delivered has been added to the FSTD, it may be assessed by the competent authority to ensure that it does not adversely affect the quality of training delivered."

**Impact to FlightSafety**

The original statement is so broad in scope that the addition of something as simple as a chart holder or the replacement of an analogue clock with a digital clock would require an expensive special evaluation of the FSTD. There is no value-added benefit to these special evaluations unless the addition affects the manner in which training is delivered.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 3 -  
Chapter 2 - OR.ATO.350 Application for FSTD qualification**

p. 14

comment 251 comment by: RAeS ICFO

To facilitate the adoption future ICAO criteria for FSTDs the use of specific description for types of training devices should be avoided in this section.

Delete (b). The current para (b) regulates a very specific detail.  
It appears that this detail could be addressed in AMC to AR.ATO.125 "Training Program – type rating courses – helicopters

comment 850 comment by: DGAC FRANCE

**OR ATO 350**

The link established between the ATO and the FSTD qualification is totally inappropriate. We think that the system established in JAR STD should be keep ; the RIA explain that on this point the JAR system has been kept but it is not the case ; all changes should be explain clearly by EASA by an assessment of the consequences of such changes ; What is the situation if an FSTD is used outside the EU territory and the ATO is based in the EU territory ? The EASA will have to qualify the FSTD whereas the ATO will be certified by a MS. Moreover what is the situation if the FSTD is used by several ATO from different MS in the community : different qualifications issued by different competent authorities will have to be delivered? We propose to come back to the JAR STD system which have proved his efficiency.

comment 2088 comment by: CAE

As a general comment, we suggest that EASA provide standardized process to each competent authority for such applications.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 3 - Chapter 2 - OR.ATO.360 Qualification basis**

p. 14

comment 346 comment by: UK CAA

**Page No:**  
Page 14 of 83

**Paragraph No:** OR.ATO.360

**Comment:**

The concept of "Special Conditions" is new to the ATO and FSTD community, although it has been used conventionally in respect of aircraft certification. GM material for this paragraph would be extremely beneficial.

**Justification:**

The ATO/FSTD manufacturing industry is unlikely to understand what a Special Condition means or how these additional requirements are documented and processed.

**Proposed Text (if applicable):**

EASA to provide GM Material including examples. See also reference to Special Conditions in Part AR.ATO.200 para c.

comment 2074 comment by: *MOT Austria*

OR.ATO.360(a)

Item (3) could be deleted, coming from the product certification, where a direct safety impact exist.

comment 2402 comment by: *FAA*

**OR.ATO.360 Qualification basis** How will simulators that were granted approval by competent authorities (such as the FAA) prior to EASA's formation and that are currently being utilized by EU Member State operators be qualified? If not fully recognized as being compliant, their removal from service could have a significant impact on the availability of full flight simulator training devices available to EU Member State operators. This reduction in available simulators could necessitate the changing of training and checking intervals for operators that no longer have qualified simulators available, or could lead them to conduct training and checking in the aircraft with its reduced safety margin, increased cost, and negative impact on the environment.

**Recommendation:** Establish provisions for the recognition of simulators qualified by an authority other than EASA and an EU Member State national aviation authorities to avoid an unnecessary negative impact on the availability of flight simulators and the subsequent negative impact on safety for the EU Members States, their operators, and the general public.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 3 - Chapter 2 - OR.ATO.370 Interim FSTD Qualification**

p. 14

comment 7 comment by: *MVA*

Interim FSTD Qualification, paragraph (b): the applicability of interim qualifications for level A, B, and C FFS is also valid for aeroplane FFS, not only for helicopter FFS.

comment 204 comment by: *DGAC FRANCE*

OR-ATO-370 Paragraph (b)

There is no reason, neither technical nor technical, to make a difference between helicopters and aeroplanes concerning the interim qualification level

granted. Therefore the wording used in CS FSTD A and H should be the same.

The following sentence, compliant with JAR-FSTD A and H requirements, is proposed :

***“For Full Flight Simulators, an Interim Qualification Level will only be granted at levels A, B or C”.***

comment 252

comment by: RAeS ICFO

Para (b) is out-of-date. There is no difference in the interim Qualification Standards available to Aeroplanes or Helicopters. Additionally, there is no reason to exclude Interim Qualification on other levels of type specific devices as is allowed today.

**Paragraph No:** OR.ATO.370

**Comment:**

The IRs provide for the qualification of simulators for new aircraft types (OR.ATO.370) and indicate the responsibilities and the procedures to be followed by the operator. The Competent Authority is defined in OR.GEN.001, as being a National Authority or EASA, but makes no distinction between initial or first of type and depends on where the device is situated. For first of type simulators where they are placed in a Member State, these rules appear to give the qualification responsibility to the Member state, rather than a JSET (or equivalent under EASA). What is not clear is how the JSET activities are integrated into these rules.

**Justification:**

Clarity and explanation needed.

comment 348

comment by: UK CAA

**Page No:**

Page 14 of 83

**Paragraph No:** OR.ATO.370(b)

**Comment:**

Paragraph (b), which confirms that interim qualification restricted to level A, B or C is limited to helicopters, implies that aeroplanes could be allowed an interim Level D that has not been the case previously. Reference to helicopters should be removed from paragraph b.

**Justification:**

An interim qualification to level C for helicopters and fixed wing FSTD is an appropriate and technically consistent approach.

**Proposed Text (if applicable):**

AR.ATO.370 (b) to be amended as follows:-

(b) For FFS, an interim qualification level shall only be granted at levels A, B or C.

OR.ATO.375 duration and continued validity  
(b) (2);

Strongly Suggest to delete the whole paragraph as worded. If a simulator of the ATO fail in some sense any evaluation that does not have to affect extended validity for other devices

comment

253

comment by: *RAeS ICFO*

To facilitate the adoption future ICAO criteria for FSTDs the use of specific description for types of training devices should be avoided in this section.

Reword OR.ATO.375 to read

“Duration and continued validity”

“The FSTD qualification is issued for an unlimited duration and its validity is subject to the type of FSTD”

and move the existing text in paras a to c to a new AMC to OR.ATO.375

The validity would then be described in a new AMC to OR.ATO.375 which would mirror the text currently located in the OR.ATO.375.

comment by: UK CAA

**Page No:**

15 of 83

**Paragraph No:** OR.ATO.375 (b)**Comment**

This paragraph requires evaluation at periods not exceeding 12 months. It is not clear when this period starts and ends. JAR FSTD allows for a recurrent to be carried out up to 60 days before expiry, and then the ongoing qualification period starts from the expiry date (up to 60 days later). This is not evident in the IRs and means that after a recurrent that is carried out early it is implied the clock starts at the evaluation. This means that the competent authority will be making evaluations at periods much less than a year in some cases. The start and end points need to be defined.

**Justification:**

The text as presented will require competent authority evaluations at periods less than 12 months, increasing regulatory burden and regulatory resource requirements.

**Proposed Text (if applicable):**

Add a new AMC to OR.ATO.375

The start date for each recurrent 12 month evaluation period is the date (day/month) of the initial qualification. A FSTD recurrent evaluation can take place at any time within the 60 days prior to the end of the 12 month recurrent evaluation period.

comment

350

comment by: UK CAA

**Page No:**

15 of 83

**Paragraph No:** OR.ATO.375 (b)(2)**Comment**

The text of (b)(2) has been changed to make it much more difficult to permit the use of extended evaluations. JAR FSTD A requires a satisfactory record of evaluations, where this text requires all evaluations to be positive. There are many reasons why a FSTD qualification may not be renewed (device failure for example). A single failure could therefore jeopardise an established extended valuation programme from a competent simulator operator.

**Justification:**

The text in (b)(2) is a change in philosophy from JAR FSTD A that will have an adverse effect on the operating industry and on Competent Authority

resources, with no visible safety benefit.

**Proposed Text (if applicable):**

Amend OR.ATO.375 (b)(2) to read (as per ACJ to JAR FSTD A.020 Para 1.1b):

The FSTD operator has got a satisfactory record of successful regulatory FSTD evaluations over a period of at least three years.

comment 351

comment by: UK CAA

**Page No:**

15 of 83

**Paragraph No:** OR.ATO.375 (b)(5)

**Comment**

An AMC is needed for this paragraph to allow for the option that the accountable person may have either training or FSTD experience if the other aspect is available within his organisation under a procedure documented in the compliance monitoring system.

**Justification:**

Experience has shown that there are very few accountable persons available in the FSTD operating industry having adequate FSTD and training experience. In practice, the accountable person generally has one or other of these elements as a primary discipline and relies upon the expertise of other nominated and accepted persons within their organisation to assist in carrying out the overall assessment. To add this option now will reflect the current situation and avoid later AMC proposals.

**Proposed Text (if applicable):**

Add AMC to OR.ATO.375 (b)(5)

The accountable person may have FSTD or training experience only, provided the other element of expertise is available within the ATO and a procedure for undertaking the annual review and reporting to the authority is documented within the Compliance Monitoring System.

comment 434

comment by: FlightSafety International

**Comment**

The requirement that "All FSTD's of the ATO have been subject to positive evaluations of compliance over the last three years" is impossible to meet for a large ATO with multiple training locations and the subsequent routine addition and relocation of FSTD's to meet customer requirements.

**Proposal**

Change the requirement to state: "The FSTD under consideration has been subject to positive evaluations of compliance over the last three years."

**Impact to FlightSafety**

This change will allow FSTD's with a proven record to be placed on the extended evaluation programme while still allowing the necessary addition and relocation of FSTD's within the ATO.

comment 435 comment by: *FlightSafety International*

**Comment**

The requirement for the ATO to have been approved for three years would prevent the continuation of currently valid extended evaluation programmes of FSTD's until the IR's take effect and the ATO has been approved for three years after.

**Proposal**

Delete requirement (b)(3) in it's entirety.

**Impact to FlightSafety**

The currently proposed requirement would in effect "restart the clock" for all existing extended evaluation programmes, thus imposing an increased financial burden on the ATO's and an increased resource burden on the Authority, when the FSTD's and ATO's have already proven themselves to be acceptable for the extended evaluation programme.

comment 436 comment by: *FlightSafety International*

**Comment**

The requirement for an annual formal audit of the compliance monitoring system is an expensive and time-consuming burden for both the ATO's and the Authority.

**Proposal**

Change the requirement to state: "The competent authority performs an audit of the compliance monitoring system on an interval determined to be acceptable to the authority and the ATO to prove the effectiveness of the system.

**Impact to FlightSafety**

The topic of audits of the compliance monitoring system, especially for large ATO's with established corporate compliance systems implemented at numerous training centres has resulted in agreement of the majority of Authorities that a "sampling system" of auditing is adequate to prove the effectiveness of the system, thereby reducing the resource burden on both the ATO's and the Authority.

comment 437 comment by: *FlightSafety International*

**Comment**

The requirement for a single person within the ATO, having both FSTD and training experience, is virtually impossible to achieve.

**Proposal**

Change the requirement to state: "An accountable person of the ATO ensures that a competent person with FSTD experience reviews the regular reruns of the QTG and a competent person with training experience conducts the relevant function and subjective tests every 12 months. The accountable person will ensure a report of the results of these reviews are sent to the competent authority."

**Impact to FlightSafety**

It is virtually impossible to find personnel with experience both in reviewing and evaluating QTG's and in conducting function and subjective tests. All

authorities recognize this fact and therefore for every evaluation they assign a technical inspector to review the QTG tests and a flight inspector to perform the function and subjective tests. It is unreasonable to require the ATO to do any different.

comment

723

comment by: *ALSIM Simulateurs*Proposed text:

- (a) An FFS, FTD or FNPT qualification shall be issued for an unlimited duration, and shall remain valid subject to:
- (1) The FSTD and the training organisation remaining in compliance with the applicable requirements;
  - (2) The FSTD being evaluated on a recurrent basis for compliance with the applicable qualification basis at periods not exceeding 12 months and 36 months for FNPT;
  - (3) The qualification not being surrendered or revoked.
- (b) This period of 12 or 36 months established in (a)(2) may be extended to 36 months for FFS & FTD and 60 months for FNPT, in the following circumstances:
- (1) The FSTD has been subject to an initial and at least one recurrent evaluation that has established its compliance with the qualification basis;
  - ~~(2) All the FSTDs of the ATO have been subject to positive evaluations of compliance over the last 3 years;~~
  - ~~(3) The ATO has been approved for at least 3 years;~~
  - (4) The competent authority performs a formal audit of the compliance monitoring system as defined in OR.GEN.200 (a)(7) of the ATO every 12 months; and
  - (5) An accountable person of the ATO with FSTD and training experience reviews the regular reruns of the QTG and conducts the relevant function and subjective tests every 12 months and sends a report of the results to the competent authority.
- (c) A BITD qualification and shall be issued for an unlimited duration and shall remain valid subject to regular evaluation for compliance with the applicable qualification basis by the competent authority at the request of the ATO. This evaluation shall be made at periods not exceeding 36 60 months.
- (d) Upon surrender or revocation, the FSTD qualification certificate shall be returned to the competent authority.

Comment:

Technology improvement has dramatically increased the level of reliability those last few years. As a consequence, it would be acceptable to increase the duration of the qualification validity.

Moreover, the high level of requirements regarding the ATO Quality System is the guaranty that it is able to maintain its FSTD over the years.

It appears that through the Quality System, an ATO is able to perform all the necessary checks and to lead the appropriate actions to ensure the correct use and maintenance of the FSTD without further evaluation from its Authority.

This is also a key in the accountability of the Operator concerning its FSTD and its training.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 3 - Chapter 2 - OR.ATO.380 Changes to the qualified FSTD**

p. 15

comment 352

comment by: *UK CAA*

**Page No:**  
15 of 83

**Paragraph No:** OR.ATO.380 (a)

**Comment:**

This paragraph is inconsistent with the AMC to OR.ATO.310 (b), which defines a major change, in that it does not include all the elements in the referenced

AMC but includes two additional items that are not in the AMC. The AMC to OR.ATO.380 does not discuss what a major change is. (Note: see also UK CAA comments on AMC to OR.ATO.310 (b) which adds the two items removed from this paragraph under this proposal).

**Justification:**

Inconsistency needs to be corrected. To put all the examples of major change (modification) into one place would address this point.

**Proposed Text (if applicable):**

Amend OR.ATO.380 (a) to read (proposed amendments *italicised and underlined*)

(a) The ATO operating a qualified FSTD shall inform the competent authority of *any* proposed ~~major~~ changes to the FSTD, such as:

*(1) Major modifications (see AMC to OR.ATO.310 (b))*

(2) Relocation of the FSTD; and

(3) Any deactivation of the FSTD.

Remainder of text unchanged.

comment

353

comment by: UK CAA

**Page No:**

Page 15 of 83

**Paragraph No:** OR.ATO.380 (d)

**Comment:**

Second paragraph of (d) does not say what has to be agreed with the competent authority.

**Justification:**

Editorial change for clarity.

**Proposed Text (if applicable):**

The ATO shall agree *a plan for the de-activation, any storage and re-activation with* the competent authority to ensure that the FSTD can be restored to active status at its original qualification level.

comment

384

comment by: ALSIM Simulateurs

Proposed text:

(a) The approved training organisation operating a qualified FSTD shall inform the competent authority of any proposed major changes to the FSTD, such as:  
(1) aircraft modifications, which could affect the **FFS or FTD** qualification.

Comment:

In case of FNPT or BITD, an aircraft modification does not necessary impact the device as FNPT qualification is not subject to type specific characteristic.

comment 438 comment by: *FlightSafety International*

**Comment**

After the relocation of a qualified FSTD, this new requirement demands the competent authority perform an evaluation.

**Proposal**

Change the last sentence to state: "An evaluation of the FSTD in accordance with its original qualification basis may be required by the competent authority.

**Impact to FlightSafety**

This requirement is a departure from current FSTD A requirements which allow the competent authority the choice to determine whether or not a special evaluation is required. The forcing of a special evaluation imposes serious economic burdens on the ATO and resource burdens on the Authority.

comment 439 comment by: *FlightSafety International*

**Comment**

The ATO shall agree with the competent authority to ensure that the FSTD can be restored to active status at its original qualification level.

**Proposal**

Change the wording to say "...active status at an agreed qualification level."

**Impact to FlightSafety**

This will allow for the possibility that the relocation of a device because of a change in use might also require a change in qualification level.

comment 482 comment by: *Thales Training & Simulation*

**Changes to the qualified FSTD (c) - Relocation**

The wording of the text reads:

"When an FSTD is moved to a new location, the ATO shall inform the competent authority before the planned activity along with a schedule of related events.

An evaluation of the FSTD in accordance with its original qualification basis shall be required by the competent authority."

The next paragraph:

"Prior to returning the FSTD to service at the new location, the ATO shall perform at least one third of the validation tests, and functions and subjective tests to ensure that the FSTD performance meets its original qualification standard."

The combination of these words implies that the major evaluation takes place prior to the re-location rather than after it. This does not seem quite right. Having broken down a device, shipped it and re-assembled it, to perform a less rigorous evaluation seems strange. There is room for confusion in the interpretation of the words here. Clarification is required.

comment

719

comment by: *ALSIM Simulateurs*Proposed text:

(c) When an FSTD is moved to a new location, the ATO shall inform the competent authority before the planned activity along with a schedule of related events.

A special evaluation of the FSTD (equivalent to a recurrent evaluation) in accordance with its original qualification basis may be required by the competent authority. The Authority should be mindful of the potential burden placed on the ATO by a special evaluation and should always consider that burden when deciding if such an evaluation is necessary. Prior to returning the FSTD to service at the new location, the ATO shall perform at least one third of the validation tests, and functions and subjective tests to ensure that the FSTD performance meets its original qualification standard. A copy of the test documentation shall be retained together with the FSTD records for review by the competent authority.

Comment:

Specially in the case of FNPT, the relocation of an FSTD is usually very simple and it would not be fair to be forced to perform a new evaluation, bearing in mind of the potential burden placed on the ATO by a full evaluation.

comment

2052

comment by: *AIRBUS*

The case of Mobile FTD should also be addressed in the paragraph (c). In the case of a Mobile-FTD (Refer to Airbus comments on NPA 2008-22d, CS-FSTD(A)), an MFTD Qualification Certificate should be issued for the MFTD Model to the operator following satisfactory completion of an evaluation by the competent authority. This qualification would be valid for all serial numbers of this MFTD Model used by the same operator without further evaluation by the competent authority. This would be applicable for identical machines at any of the declared sites of that operator.

comment

2161

comment by: *AIRBUS*

It is understood that simulators qualified before JAR STD1A Amendment 3 (or NPA-STD 11) became applicable could maintain their approval under the previous JAR criteria. It is at the discretion of the Authority to decide if major updates or relocation of the simulator would require a change to Amendment 3 or CS-FSTD(A) requirements.

Flight Test data is not necessarily available to support updates of such devices. Use of existing test definitions (as defined in the Master QTG for the FSTD) for flight dynamics and performance sections could be an alternative means of compliance.

Airbus considers necessary to clarify the EASA position concerning Full Flight Simulators already in service before JAR STD1A Amendment 3 became applicable. Additional Flight Test data would in any case not necessarily be available, and thus the changes (which would use engineering validation source data) would bring limited added value.

comment

354

comment by: UK CAA

**Page No:**

16 of 83

**Paragraph No:** OR.ATO.385**Comment:**

It may not necessarily be required to carry out a full evaluation in the event of a transfer of ATO.

**Justification:**

If the device is not relocated for example (i.e. a new ATO takes over a facility and all the records), and continues to operate the qualified FSTDs, the FSTD itself would not need a re-evaluation. The qualification certificate would need to be re-issued and the new ATO CMS assessed but the device will not change in capability or performance.

**Proposed Text (if applicable):**

Replace existing OR.ATO.385 (b) with the following:

(b) An assessment of the ongoing qualification status and Compliance Monitoring System within which the device will be incorporated will be carried out by the competent authority. This may include an evaluation of the FSTD in accordance with the initial qualification basis.

Add new AMC to OR.ATO.385 (b) to read:

An evaluation of a FSTD will normally be required when the transfer includes relocation, transfer to an ATO who is operating FSTDs for the first time or where the competent authority considers that an evaluation is necessary to ensure that the FSTD continues to comply with the applicable regulations.

comment

722

comment by: ALSIM Simulateurs

Proposed text:

(b) A special evaluation of the FSTD (equivalent to a recurrent evaluation) in accordance with its original qualification basis may be required by the competent authority. The Authority should be mindful of the potential burden placed on the ATO by a special evaluation and should always consider that burden when deciding if such an evaluation is necessary.

Comment:

There are no evidence that a change of the ATO has potential effects on the operation of the FSTD above all if the FSTD is not moved.

If it is moved, the comment on "OR.ATO.380 Changes to the qualified FSTD" is applicable.

Moreover, a distinction should be clearly made between the Quality System of the ATO and the FSTD itself.

OR.ATO.410 (b)

The initial training done for instructors of a training organization should be allowed at any of the organizations locations. Prefer:  
"The instructors' initial training shall take place at the principal place of business of the ATO or one of its satellite locations."

comment	293	comment by: <i>Susana Nogueira</i>
	(b) Delete paragraph	
comment	371	comment by: <i>Aero-Club of Switzerland</i>
	Question before commenting: Why must the instructors initial training take place at the ATO's principal place of business?	
	Proposal: Delete this requirement.	
	Justification: There may be better suited places than the principal place of business. Is it up to the operator to decide, not to the NAA, not to the Agency: The operator pays the bills...	
comment	689	comment by: <i>Royal Danish Aeroclub</i>
	We see no reason for the instructors' initial training to take place at the principal place of business of the ATO. The important thing is the quality of the training - not the place of the training.	
	Delete the paragraph OR.ATO.410 (b).	
comment	884	comment by: <i>Boeing</i>
	<i>OR.ATO.410</i> <i>Para (b)</i> <i>page 17</i>	
	We request that EASA delete this requirement. The requirement of paragraph (b) is an unnecessary burden on ATO's, as training for these instructors can be done at any site the organization uses.	
	<b>JUSTIFICATION:</b> "Principal place of business" is defined in OR.GEN.001(b) as "the organization site from which the majority of the organisation's management personnel . . . directs, controls, or coordinates its operational activities, ensuring that the organisation complies with the requirements of this Part."	
	Nowhere does it specify that there needs to be an actual classroom or instructors present. This would cost additional time, travel expenses, etc., which are unnecessary.	
comment	1128	comment by: <i>CAA Belgium</i>
	(b) Delete paragraph.	
comment	1617	comment by: <i>Graham HALLETT</i>
	Paragraph (b): Why? I can think of no reason why this training has to take place at any particular place. If there is some reason, such as access to certain facilities, or personnel, etc, then this requirement should refer to those requirements, rather than by location. If not, then this paragraph should be deleted.	

comment 1790 comment by: *Swiss Power Flight Union*  
 We are not agree. Delete Letter (b).

comment 2101 comment by: *Irish Aviation Authority*  
 (b) why should the initial training for an Instructor take place at the *principal* place of business of the ATO? - suggest this para is deleted sw 280509

comment 2136 comment by: *CAA Norway*  
 OR.ATO.410(b)  
 Why it is required that instructors initial training should take place at the principal place of business of the ATO?  
 The regulation should focus on the contents and quality of training, not the location.  
 Delete paragraph.

comment 2308 comment by: *Danish Powerflying Union*  
 We suggest EASA to delete **OR-ATO.410 (b)**.  
 We see no need for the instructors' initial training to take place at the principal place of business of the ATO. The quality of the training must be the most essential.

comment 2428 comment by: *FlightSafety International*  
 This is an unnecessary burden on ATO's, as training for these instructors can be done at any site the organization uses. Please remove this requirement.  
 Principal place of business is defined as in OR.GEN.001 (b) as "the organization site from which the majority.....of this Part." Nowhere does it specify that there needs to be an actual classroom or instructors present. This would cost additional travel expenses etc which are unnecessary.

885

comment by: Boeing

OR.ATO.430  
Para (b)  
page 18

The TRI(A) requirement to have “sufficient operational experience on the aeroplane type” is subjective. Please include specifics.

**JUSTIFICATION:** The addition of more specifics in this paragraph is appropriate to avoid differences between Member States and to maintain a level playing field.

comment

1117

comment by: ECA- European Cockpit Association

Comment: add the requirements of EU OPS 1.945 (d):

**(c) A pilot, undertaking a zero flight time training (ZFTT) course, shall: 1. commence line flying under supervision as soon as possible within 21 days after completion of the skill test.**

**If line flying under supervision has not been commenced within the 21 days, the operator shall provide appropriate training acceptable to the Authority.**

**2. complete six take-offs and landings in a flight simulator, qualified in accordance with the requirements applicable to synthetic training devices and user approved by the Authority, not later than 21 days after the completion of the skill test.**

**This simulator session shall be conducted by a type rating instructor for aeroplanes (TRI(A)) occupying a pilot’s seat.**

**When recommended by a JOINT OPERATIONAL EVALUATION Board (JOEB) and approved by the Authority, the number of take-offs and landings may be reduced.**

**If these take-offs and landings have not been performed within the 21 days, the operator shall provide refresher training acceptable to the Authority;**

**3. conduct the first four take-offs and landings of the Line Flying Under Supervision in the aeroplane under the supervision of a TRI (A) occupying a pilot’s seat.**

Justification:

The recognized key point of ZFTT is the strict sequencing of training, in order to maximize the success of the training, it is essential that the EU OPS provisions are kept.

Chapter 2 - OR.ATO.435 Flight Simulation Training Devices**

p. 18

comment 230

comment by: ECA- European Cockpit Association

Comment: change text as follows:

OR.ATO.430 General

~~(a) **The flight simulator for ZFFT shall be fully serviceable. Approval for ZFFT, as specified in Part FCL, shall only be given to an ATO that also has the privileges to conduct commercial air transport or an ATO having a specific arrangement with a commercial air transport operator.**~~

~~(b) **Approval for ZFFT shall only be given if the operator has at least 90 days of operational experience on the aeroplane type. In the case of ZFFT provided by an ATO having a specific arrangement with an operator, the 90 days operational experience requirements will not apply if the TRI(A) involved in the additional take-offs and landings, as required in subpart OPS, has sufficient operational experience on the aeroplane type.**~~

Justification:

The requirement is not compliant with provisions of Appendix 1 to JAR FCL 1.261(c)(2), point 1 b.

comment 1901

comment by: AIR FRANCE

We propose to complete the paragraph b:

"The motion and the visual system of the flight simulator shall be fully serviceable **for ZFFT sessions.**"

Indeed for others trainings, some failures can occur with no impacts onto the training quality.

comment 2106

comment by: Irish Aviation Authority

1) As this Chapter is applicable only to ZFFT (which can only be achieved in a FFS), suggest that the title be changed to " Full Flight Simulator"

2) If agree with (1) above, then para (a) should be changed to read "(a) The **full** flight simulator...." sw 280509

comment 2137

comment by: CAA Norway

OR.ATO.435

The "flight simulator" mentioned in (a) and (b) is not in the FSTD list of definitions in OR.GEN.010. We assume it was intended to use "full flight simulator" to be in line with the definitions.

comment	2244	comment by: CAA Finland
	<p>Move to general requirement and amend. It is dangerous to mention in some sentences "fully serviceable". It shall be a common requirement. There is a risk for opposite interpretation; in other training than ZFTT the FSTD has not be serviceable.</p> <p>(a) The flight simulator approved for ZFTT shall be <b>fully</b> serviceable according to the management system criteria of the ATO.</p> <p>(b) <del>The motion and the visual system of the flight simulator shall be fully serviceable.</del></p>

comment 2140

comment by: *CAA Norway*

OR.ATO.450

This paragraph needs to be reworded for two reasons:

1) An ATO as such can per se never have the privilege to conduct commercial air transport. The more common situation is for an AOC holder to also control a TRTO/ATO.

2) It must also be clarified if this is limited to AOCs issued according to EASA Parts, or if any AOC is acceptable.

**B. Draft Rules - III. Draft Opinion Part-OR - Subpart ATO - Section 4 - Chapter 4 - OR.ATO.455 General**

p. 20

comment 9

comment by: *Giorgio Clementi*

Please explain how it will be determined what an "adequate" number of instrumented aircraft will be defined - Is it one? Two? all of them? As a responsible training provider and an experienced flight test professional, I have had the ability to decide that based on my understanding of the customer training needs. Is this going to be left up to an EASA inspector to decide on the spot? Will he be a graduate of a competing organisation? This requirement is too vague and open to interpretation.

(2) Many Heads of Flight Test Departments throughout industry are Flight Test Engineers. Why can the head of a flight test training organisation not be a Flight Test Engineer? I have had no particular difficulty in doing this for fifteen years. How much is extensive experience? Three years? More? Who decides and when?

comment 78

comment by: *ETPS CI*

OR.ATO.455 General

*(b) The training records shall include a written report by the student for any flight performed including, where applicable, data processing and analysis of recorded parameters relevant to the type of flight testing.*

**Comment 3:** Students can fly as many as 100 flights during a typical category 1 course. It is not good teaching practise for a report to be submitted on every flight. Recommend that students are required to submit reports on a suitable

number of the flights they undertake.

Comment on paragraph (a)(4):  
 A text to state the requirements for the instructors and examiners for flight testing rating should be included.

**Justification:**

Nowhere it is stated what the requirements are for flight instructors and examiners for flight testing. The paragraph is incomplete and should be clarified in order to avoid misinterpretation.

comment 233

comment by: ECA- European Cockpit Association

Comment on paragraph (b):  
 All recorded parameters, as well as training records, shall be subject to flight data protection in the same way as CAT flight data are.

comment 356

comment by: UK CAA

**Page No:**  
 20 of 83

**Paragraph No:** OR.ATO.455

**Comment:**

This section sets the requirements for the approval of flight test schools and should be reviewed for practicality.

**Justification:**

The principle of establishing a standard for test pilot training and qualifications across Europe is supported. However, the practical implications of such an initiative are wide ranging and need to be considered more fully.

Most organisations training test pilots are run by the military. There is no infrastructure currently in place to qualify them as ATOs and the cost and practicality of doing so needs to be addressed.

comment 440

comment by: FlightSafety International

**Comment**

Since it is not defined or quantified in any document, the use of the word "extensive" is open to subjective opinion.

**Proposal**

Delete the word "extensive" from the requirement.

**Impact to FlightSafety**

The experience level of the HoT would be evaluated during the determination of his/her acceptability to the Authority.

comment 813 comment by: *Light Aircraft Association UK*

The LAA recommends the inclusion of a possibility for other organisations to give flight testing training for certain groups of aircraft. E.g. an airports organisation such as the LAA might be best positioned to provide flight test training on ELA aircraft.

comment 825 comment by: *AEA*

Comment: The flight testing courses in this article are not defined. There should be clearly stated that this requirement is applicable to flight testing categories 1 & 2 only.

comment 886 comment by: *Boeing*

*OR.ATO.455*  
*page 20*

Paragraph OR.ATO.455 incorrectly assumes that all flight test organizations are qualified as ATOs. Foreign manufacturers training their own test pilots who will be used for test flights of that manufacturer only are not governed under this. Please provide an exemption, as under JAR-FCL 1.015, App. 3, for manufacturers' pilots.

**JUSTIFICATION:** Our suggested change is appropriate in order to provide customer support from the manufacturer for critical tests and to allow manufacturers to train their own test pilots without requiring an ATO approval.

There should be clearly stated that this requirement is applicable to flight testing categories 1 & 2 only.

comment 2199 comment by: *Icelandair*

Comment: The flight testing courses in this article are not defined.  
There should be clearly stated that this requirement is applicable to flight testing categories 1 & 2 only.

comment 2245 comment by: *CAA Finland*

Delete. Flight testing is a very rare and specific area of aviation. There is no need to have it on common rules. Otherwise there should be courses for more common activities like helicopter pillar lifting, fertilizer spraying, water bombing etc.

comment 2382 comment by: *FINNAIR*

Comment: The flight testing courses in this article are not defined.  
There should be clearly stated that this requirement is applicable to flight testing categories 1 & 2 only.

comment 2411 comment by: *FAA*

**OR.ATO.455 General** How would aircraft manufacturers who currently have a in-house training programs for their flight test personnel and qualification programs for their flight test employees be qualified under this provision? No AMC material is provided.

**Recommendations:**

Develop a grandfather provision for manufacturers who currently have in-house flight test pilot training and qualification programs.

Develop AMC materials to provide guidance to the acceptable methods of compliance.

comment by: Civil Aviation Authority of Norway

Comment to section (b):

The requirement for an affiliation to a designated hospital or medical institution is inappropriate. In Norway we have at the time being one AeMC, situated in Oslo. Applicants come from the whole country to Oslo, and in case of need for further assessment by specialists they will be transferred to a reliable health care provider in the vicinity of their place of living. We therefore propose to delete the wording: "provide details of clinical attachments to a designated hospital or medical institution", and replace it with: "provide details of clinical attachments to hospitals and medical institutions".

comment by: *AECA (SPAIN)*

(b) Repace drafted text by

**at least the number of class 1 medical examinations every year as determined by the competent authority**

Justification: Many countries are not able to perform 500 class 1 examinations every year. This regulation means an impossible, probably, for all countries having more than one AeMC.

comment

131

comment by: *DCA Malta***Proposal:****Delete paragraph (b)**

**As this paragraph discriminates against small states especially Malta because there are simply not enough applicants.**

**In case this is not accepted we are proposing 4 other options:**

(1) Replace 'at least 500 class 1 medical examinations every year.'

by

'at least the number of class 1 medical examinations every year as determined by the competent authority'.

(2) If 'as determined by the competent authority' is not acceptable then replace the '500' by '25' which is more or less the number of Initial Class 1 medical examinations done in Malta .

(3) If (1) and (2) are not accepted add a new paragraph (c)

(c) paragraph (b) does not apply in the case of small states which cannot meet this requirement..

(4) if (1)(2)(3) of the above are not accepted and independent of the final wording of OR.AeMC.035(b) amend to the effect that:

**"Each State will have the right to have one AeMC".**

**Reason:** In a small country where the total pilot population is small the total number of class 1 medical examinations per year for the whole country is consequently much less than 500, and so requirement (b) cannot be met.

A requirement higher than 25 **would mean that Malta would not be able to have an AeMC which would be discriminatory and Maltese pilots will have to go abroad for their initial medical assessment at significant additional costs to obtain a class 1 medical certificate.**

The bottom line is that a way has to be found so that small States, will have at least one AeMC.

comment	359	comment by: UK CAA
<p><b>Page No:</b> 21</p> <p><b>Paragraph No:</b> OR.AeMC.035 (b)</p> <p><b>Comment:</b> It is assumed that (b) refers to a collective requirement for the AeMC as an organisation and not to the individual AMEs within the AeMC.</p> <p>The principle of having a minimum annual number of examinations is strongly supported. 500 examinations is only 10 per week which is the minimum that is satisfactory to maintain aviation medicine expertise.</p>		
comment	414	comment by: Civil Aviation Authority of Norway
<p>Comment to section (a): Section (a) refers to MED.C.030 that defines the requirements for the approval of AMEs. An AeMC usually have affiliated specialist as part of the organisation. They should not have to comply with AME approval criteria. We therefore propose to delete "medical staff" and replace it with "aeromedical examiners" and change (a) to "complying with Part Medical".</p> <p>Comment to section (b): The requirement for 500 class 1 medical examinations per year is inappropriate. In a minor country you won't have a pilot population that generates 500 examinations per year. This number has to be reduced. In case a new AeMC is established it will take time to establish customer relations and a normal activity. We therefore propose to delete the wording: "having performed at least 500 class 1 examinations every year", and replace it with: "having performed minimum 300 class 1 examinations within the last 3 years".</p>		
comment	583	comment by: European CMO Forum
<p><b>OR.AeMC.035(a)</b></p> <p><b>Comment:</b> (a) refers to MED.C.030 which only contains the requirements for the approval of individual AMEs.</p>		

**Justification:**

AME approval requirements need to be confirmed in this section. Other medical staff, for example specialists may form part of the organisation but should not have to comply with AME approval criteria. The AMEs need to comply with all Part Medical.

**Proposed Text:**

Delete 'medical staff' and insert '**aeromedical examiners**' and change (a) to '**complying with Part Medical**'.

comment 590

comment by: *European CMO Forum***OR.AeMC.035 (b)****Comment:**

A fixed minimum number of class 1 examinations to be undertaken annually by an AeMC should not be stated in the IRs. In smaller member states the total number of class 1 examinations may be far less than 500 per year.

It is important for each Member State to have at least one AeMC. If there is more than 1 AeMC the AeMC should undertake a reasonable volume of aeromedical examinations and assessments.

**Justification:**

A minimum number of annual examinations is required to maintain sufficient aviation medicine expertise.

**Proposed Text:**

**Amend O R.AeMC.035 (b) to: 'having performed at least 5 00 Class 1 aeromedical assessments every year (averaged over a 3 year period).'**

**Add new OR.AeMC.035 (c)**

**'Notwithstanding OR .AeMC.035 (b) each State shall approve at least one AeMC.**

**Add new AMC to OR.AeMC.035 (b) on page 82**

**(i) Notwithstanding OR.AeM C.035 (b) t he Auth ority m ay ap prove an additional AeMC in States where the annual volume of Class 1 medical assessments is low.**

**(ii) Notwithstanding OR.AeMC.035 (b) the Auth ority may approve additional AeMCs in overseas territories when required.'**

comment 1012

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)***Comment:**

This paragraph mixes different items which should be more clearly separated: Point (a) refers to MED.C.030 which contains the requirements to hold an AME certificate valid, which is not relevant for the rest of the AeMC medical staff. Point (b) obviously refers to the organisation, not to each AME.

A fixed number of class 1 examinations should not be stated in the IRs. In smaller Member States the total number of class 1 examinations may be far less than 500 per year. This would have the consequence that some Member

States will be prohibited to have an AeMC. The provisions in Part-MED that the number of AMEs can no longer be limited will most probably result in individual AMEs carrying out most of the renewal examinations, leaving mainly initial class 1 examinations to the AeMCs. The effect would be that well-functioning AeMCs in medium-sized, or even large, Member States will not reach the proposed limit of 500 class 1 examinations per year.

**Proposal:**

There should be a more clear separation of the requirements relating to individual staff working at the AeMC from those relating to individual AMEs or to the organisation.

No fixed number of examinations should be mentioned in the IRs.

comment

1073

comment by: CAA Belgium

(b)

Proposal: Delete this paragraph or replace by "having performed the number of class 1 medical examinations every year as determined by the Competent Authority".

Reason: the proposed figures are not realistic in small countries, in military AeMC's who are also open for civil pilots, etc...

comment

1130

comment by: Irish Aviation Authority

(b) will preclude some small MS from operating any AeMC.

(b) should be amended to read: (b) **if there is more than one AeMC in any MS, each AeMC** having performed at least 500 class 1 medical examinations every year. †

DCr 260509

(a) refers to MED.C.030 which contains only the requirements for the approval of individual AMEs.

AME approval requirements must be confirmed in this section. Other medical staff, like specialists may form part of the organisation but do not have to comply with AME approval criteria. The AMEs must comply with all Part Medical.

Delete 'medical staff' and insert '**aeromedical examiners**' and insert (a) to '**complying with Part Medical**'.

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

Point (a) is a duplicate of MED.A.050 (d). If (b) is added to MED.A.050 (d) the whole section OR.AeMC.220 can be deleted to avoid the duplication.

For the authority, AR.MED.120 requires that all aeromedical records of licence holders shall be kept for a minimum period of 10 years after the expiry of their licence, irrespective of applicable national rules. The same requirement might be appropriate also for AeMCs, unless they are required to send all medical documents to the licensing authority for record-keeping by the licensing authority.

The Swedish national rules require a medical record to be kept at least 10 years after the last note has been made.

**Proposal:**

Move OR.AeMC.220 (b) to MED.A.050 (d) and delete the rest of OR.AeMC.220.

"In accordance with applicable national rules" should be changed to "for a minimum period of 10 years after the examination date".

comment 1155 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**GENERAL COMMENTS**

There are no cross-reference between the appendices, AMCs and GMs, clearly established in each IR article (such as in EU-OPS).

**GENERAL PROPOSAL**

Introduce such cross-references

- stating for each article of the IR whether there are AMCs or GMs attached
- referencing and naming them (such as in EU-OPS).

**JUSTIFICATION**

Clarity and understanding

We also note that in part AR, some Annexes, AMCs and/or GMS are not attached to any article. (see comments Appendix I to Annex 1)

We also note that in part OR, some articles refer to non existing Annexes, AMCs and/or GMs (see comments OR.GEN.040)

*These comments are limited to the part of the proposed article they refer to. Since some articles refer to not yet-published (or even not yet-established) pieces of regulation or are not self-consistent, these comments are also limited to their understanding not considering the regulation as a whole. We reserve our final point of view to the issuance of a consistent and fulfilled framework of regulation. Some additional comments shall arise.*

*The fact this article is commented SHALL NOT BE considered as an acceptance or an acknowledgement of the proposed associated regulation, as a whole or of any part of it.*

*FNAM has requested a delay for commenting and proposed to EASA to settle meanwhile a common and constructive approach between the Agency, the NAAs and the industry in order to identify and discuss the issues of the proposed regulation. This comment SHALL BE considered as (and only as) the first step of key issues identification.*

*This disclaimer has to be considered as an integrative part of the following comment.*

comment 2374 comment by: *European Sailplane Manufacturers*

AMC Material:

It is a well known problem that the AMC material will only be available in English language when supplied by the agency.

In case of small aviation this has already led to severe problems as many small companies like manufacturers or maintenance organisations for small aircraft have not the capability to read and understand these texts.

The argument used by the authorities was always that this is just and reasonable because such profit organisations want to earn money and then they have to get the means to comply with regarding regulations (including

understanding the AMC).

But if this principle is now applied to organisations in the small and sport aviation sector which are of a non-profit type like clubs and federations a complete chaos will be the result.

The AMC material does clearly show that it was written with commercial / professional organisations in mind.  
But additionally this material will not be usable for many non-profit organisations simply because they cannot understand it.

The European sailplane manufacturers clearly oppose this approach and ask EASA and the European commission for a suitable solution for the small and sport aviation sector.

 AMC OR.GEN.030 and AMC OR.GEN.035 deals with OPS. remove AMC from part GEN to AMC to part OPS.

comment 491 comment by: UK CAA

**Page No:**  
23 of 83

**Paragraph No:** AMC OR.GEN.030

**Comment:**  
This paragraph reflects AOC holders only. Similar information should be provided for other organisations in respect of timeframes and what constitutes organisational change.

**Justification:**  
Consistency between the same events associated with other organisations covered under this part.

**Proposed Text (if applicable):**  
Added text to the AMC for OR.GEN.030: -

APPLICATION TIMEFRAMES – OTHER ORGANISATIONS  
 The application for a change to the approval certificate or schedule for any other organisation or the change to any nominated person should be made to the competent authority at least 60 days prior to the change taking effect.

comment 742 comment by: CAA-NL

Comment  
It is suggested to make this AMC generic by increasing the amendmend time frame to at least 60 days.

Text proposal  
 AMC OR.GEN.030 Changes to the organisation's approval  
 APPLICATION TIME FRAMES  
 1. The application for the amendment of a certificate should be submitted at least 60 days, before the date of intended changes.

comment 975 comment by: Luftfahrt-Bundesamt

The time limit of 30 days is not suitable in every case. Depending on the intended change (eg new type of aircraft) it can be sufficient or not. From our point of view a wording "In a timely manner" should be implemented in this sentence.

Application time of 30 days seems pretty close, recommend 60 days.

comment 1080 comment by: CAA Belgium  
This is OPS and not GEN material.

comment 1156 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**COMMENTS**

This AMC specifically refers to the AOC, while part OR-OPS is not yet published in the NPA 2008-22.

We do not understand the coherence between OR.GEN.030 and this AMC OR.GEN.030. Why impose specific delays only for AOCs and not for ATOs and other organizations?

**PROPOSAL**

Suppress this requirement from OR.GEN

If really necessary, maybe this AMC shall better refer to OR.OPS.015 or equivalent ?

**JUSTIFICATION**

Consistency

Should be transferred to PART OPS. This paragraph deals exclusively with OPS.

comment 1503 comment by: BMVBS (MoT Germany)

The time frame of 30 days is not suitable in every case. For more complex changes (eg new type of aircraft) it might not be sufficient. Therefore, a time frame of 60 days would be more appropriate.

Recommended amendment of the text:

1. The application for the amendment of an air operator certificate should be submitted at least ~~30~~ 60 days, before the date of intended operation.

comment 1944 comment by: *IACA International Air Carrier Association*

The time frame for reporting staff changes should not be defined by "hard" time but should read "at earliest opportunity". This is a good common practice currently, and it makes sense. Personnel matters cannot always be predicted for 10 days ...

Additionally, this should be a two-way street: AR.GEN.xxx shall require the competent authority shall handle these changes to the organisation's approval also within a specified timeframe.

comment 2107 comment by: *Irish Aviation Authority*

This para should be transferred to Part-OPS as it deals exclusively with OPS. sw 280509

comment 2142 comment by: *CAA Norway*

AMC OR.GEN.030

This is OPS material, not GEN, and should consequently be moved to OR.OPS to be in line with the structure of part OR as described by EASA.

comment 2253 comment by: *CAA Finland*

Amend. As OPS manuals need only to be acceptable to the authority and ATO manuals approved by, the changes to ATO shall be longer.

AMC OR.GEN.030 Changes to the organisation's approval  
APPLICATION TIME FRAMES —AOC HOLDERS

1. The application for the amendment of an air operator certificate should be submitted at least 30 days **and of an ATO certificate at least 60 days**, before the date of intended operation.

2. However, in the case of a change of a nominated post holder, the ~~operator~~ **organisation** should inform the competent authority at least 10 days before the date of the proposed change.

p. 23

comment 175 comment by: *DGAC FRANCE*

AMC OR.GEN.030 and AMC OR.GEN.035 deals with OPS. remove AMC from part GEN to AMC to part OPS.

comment 235 comment by: ECA- European Cockpit Association

Comment: change text as follows:

Any person authorised by the competent authority **on inspecti on duty functions** should be permitted at any time to board and fly in any aircraft operated in accordance with an Air Operator Certificate and to enter and remain on the flight deck provided that the pilot in command may refuse access ~~to the cockpit~~ if, in his opinion, the safety of the ~~aircraft flight~~ would thereby be endangered. **If the inspecti on occurs during flight, the inspector shall hold a professional pilot license.**

Justification:

Safety or Security of the aircraft is the pilot in command responsibility, not only by this regulation, but by many other ones. In certain circumstances, it may be possible that he/she has to take the decision not to allow a person, whoever he/she is, to be in certain parts of the aircraft. Also, this prerogative can only apply when the person concerned is on duty.

Only a professional pilot has enough insight of a professional cockpit environment (e.g. the necessary non-technical skills to withdraw or stop the inspection if the flight conditions require it).

OR.GEN.040 Declaration**

p. 23

comment 1 comment by: CHC Europe EASA Ops Team - representing 550 pilots across Europe

The definition of a change is not provided. Furthermore, in any ATO and AOC, things happens which makes a direct change required. Sudden changes are often notified in an AOC with the usage of a Flying Staff Instruction. This could be seen as a change but will never be submitted 14 days before.

Proposed solution; More clarification and definitions - on what is a change - are required. Also additional guidance and flexibility could be required depending the definition.

Initials DJ-CHC

comment 46 comment by: George Knight

This is unreasonable for small ATOs and clubs. It could result in clubs having to suspend operations for up to 14 days after the Annual General Meeting when new officers are elected, if a substitute instructor from another club is brought in to cover sickness, or id an aircraft is borrowed to cover unserviceability.

It is hard to see the purpose of this rule.

It would make more sense, if the authority really does have a need to know for such trivial changes, to require the small ATO teaching only non-professional pilots to advise the authority within 14 (or even 30 days) of the change - retrospectively.

comment

744

comment by: CAA-NL

Comment

For logistic reasons "14" should be replaced by "at least 30"

Text proposal

"Changes should be submitted at least 30 days before the change becoming effective."

comment

976

comment by: Luftfahrt-Bundesamt

The difference between OR.GEN030 and this paragraph is not clear. If there are changes with the operator / the operations, these have to be evaluated by the Authority at any rate. Therefore the time limit of 14 days is unacceptable.

comment

986

comment by: Swedish Transport Agency, Civil Aviation Department  
(Transportstyrelsen, Luftfartsavdelningen)**Comment:**

As commented on OR.GEN.040 these declarations are also covering persons, not only organisations.

The time frame of 14 days before becoming effective will give the authority very short time to evaluate the changes, to decide if the changes are compliant or not, and to notify the person or organisation of the decision.

The national requirements in the health care sector requires notification 30 days in advance.

**Proposal:**

1. Duplicate this AMC in relevant parts/subparts to make it applicable to persons.
2. The time frame should be extended to at least 30 days.

comment

1158

comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**COMMENTS & QUESTIONS**

We do not understand the purpose of this AMC

1/ Does this AMC really apply to OR.GEN.040 ?

2/ Meanwhile, there is nothing about initial declaration, just about changes; nothing neither within OR.GEN.030.

3/ A 2 week delay for notification could only be understood if there is a mandatory 2-week delay for answer.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart GEN - Section 2**

p. 24

comment 47 comment by: George Knight

This section is far too prescriptive for small organisations and flying/gliding clubs that which to become ATO to teach for LPL, PPL, SPL and BPL licences. Although this section provides some mitigation for small organisations it still makes the assumption that the organisations are commercial, profit making,

ATOs employing multiple full-time staff. Further simplification is necessary to make the proposals relevant and proportionate for small ATOs teaching students for recreational licences – especially those that are non-commercial clubs with few or zero full-time staff and working on a mainly volunteer basis.

The whole tone of this section seems to seek to extend EASA's remit into the area of industrial health and safety. Whilst what is presented is good motherhood the reality is that most of it is already in the remit of other government agencies such as the UK's Health and Safety Executive. The "HSE's job is to protect people against risks to health or safety arising out of work activities.". The ORs should limit themselves to matters that are aviation related and not addressed by other government agencies that have specific expertise in these health and safety matters. All that needs to be said is that organisations should have appropriate H&S measures in place in line with national legislation's requirements.

comment 144

comment by: *Aero-Club of Switzerland*

There are too many "should" in this safety-relevant Section 2!

Justification: The Agency and the NAA want to promote safety. In order to achieve this, the correct wording has to be applied.

comment 441

comment by: *FlightSafety International*

### **Comment**

This section is titled "Management System" when it is actually defining the requirements for the Safety Management System.

### **Proposal**

Change the title to "Safety Management System" throughout the section referring to safety management, up to and including section AM to OR.GEN.200(a)(5)

### **Impact to FlightSafety**

There is much confusion in the NPA's in regard to safety management systems, compliance systems, quality systems, etc. making it difficult to determine the Authority's intent.

comment 1636

comment by: *Fédération Française Aéronautique*

FFA highlights that the essential requirements call for a safety management system and a quality management system. Besides, the Agency proposes to set them up under proportionate rules (see NPA 2009-22a page 62 "Executive Summary").

FFA fully supports this important principle.

So, FFA proposes to change the title of this section into "Safety and Quality management".

comment 2383

comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*

EPFU considers that rules applying to non commercial, non profit training organisation is particularly unclear in this section.

EPFU requests clarification in all AMC of this section to avoid misunderstanding by stakeholders.

771

comment by: European Business Aviation Association (EBAA)

**AMC to OR. GEN.200 (a) (1)****2. c****Add "Guidance Material (GM) is provided for small operators"**Explanation:

The link between safety performance standards and safety performance indicators is difficult for small operators to achieve, as there are no well established rules for setting up such a system. Indeed, the development of

effective safety PIs is extremely challenging in that they have to give a true measure of an operator's safety performance without running the risk of inhibiting safety reporting. Larger operators have developed these over the years, with many disappointments and failures along the way. Rather than each operator having to develop their own, it is necessary for them to be issued with appropriate GM on best practice for measuring safety performance, supported by example PIs. Such GM can either be developed in house by EASA or simply cross referenced to industry best practice GM (e.g. IS-BAO, IBAC SMS Toolkit).

comment 905 comment by: *Royal Danish Aeroclub*

For organisations run by aeroclubs for members only, the point 2 is not "Senior management should..." is not necessary, and will be harmful to the aeroclubs. We see no flight safety benefits in the point 2a, 2b and 2c.

comment 923 comment by: *INAER*

**AMC to OR.GEN.200 (a) (1)**

Change safety policy to "management system policy", and senior management to top management.

comment 924 comment by: *INAER*

**AMC to OR.GEN.200 (a) (1)**

Include the commitments requirements to be included in the policy (specified in AMC 2 OR.GEN.200 (a) (3) 8.b, with following requirements:

**"Safety policy should include a commitment to:**

**Improve continuously the safety standards**

- **Observe all applicable legal requirements, standard and best practices**
- **Continually improve the effectiveness of the management system"**

and delete AMC 2 OR.GEN.200 (a) (3) 8.b. v., as it is redundant.

Note that it is not possible a commitment for the highest safety standards (which would be zero accidents rate), but for a continuing improvement of the actual ones. It would be also aligned with ISO 9001, 14001 and OHSAS standards.

comment 925 comment by: *INAER*

Include AMC to OR.GEN 200.(a) (1). 1.d: **"Top management should ensure that the policy is understood at all levels within the organization, and is reviewed for continuing suitability"**, in line with 5.3 EN ISO 9001:2008

comment 926 comment by: *INAER*

**AMC to OR.GEN.200 (a) (1)2.c**

**"the safety objectives and performance standards should be linked to the safety performance indicators, safety performance targets and safety requirements"**

Suggestion:

**“the safety objectives and performance standards should be linked to the safety performance indicators. ”**

Argument:

The term “safety performance targets and safety requirements” is redundant, and an objective linked to a performance indicator should be enough. The compliance of a requirement can never be an objective, as it is a requirement, and it is not related to safety performance. Therefore, a safety objective should never be linked to safety requirements, as it is already compulsory by law to comply with those requirements, and the commitment of the top management is already included in the policy.

comment

1084

comment by: *EUROPEAN GLIDING UNION*

AMC OR.GEN.200 (a) (1) Management system

In the club environment it is not necessary to have a formal management / senior management structure.

The existing structures fulfil all needs, including a proportional level of safety management.

**AMC 1 to OR.GEN.200(a)(2) Management System**

The AMC requires operators to develop hazard identification, risk analysis and mitigation processes "in a simplified manner". There are no guidance or acceptance criteria to guide those operators on what is acceptable. "simplified manner" is not a regulatory concept. This will lead to non uniform implementation throughout Europe and between operators. The only hints will be found in AMC 2 for **OR.GEN.200(a)(2)**. So small organisations will be required to implement all items to various non uniform degree. This is a safety risk.

The Agency should develop guidance for small operators in the form of GM. The deliverables of ESSI / ECAST / SMS – Safety culture working group does not address small operators hazard identification, risk analysis and mitigation processes and does not contain operational examples which might help small operators comply with the requirement. This is also an issue for the competent authority since no criteria exists to support oversight.

**PROPOSAL**

Dedicated GM should be developed. This was the mandate for ESSI/ECAST/SMS & safety culture working group. Such material is still missing.

The group should look for small operator support to develop meaningful operational guidance. Clear linkage with the EASA rulemaking process should be developed.

A task to develop GM for part AR should also be considered.

comment

189

comment by: DGAC FRANCE

**AMC 2 to OR.GEN.200 (a) (2)**

AMC is not coherent with ICAO

Ref. ICAO - AN Programme A2-SMS-SMS1: Safety management (AN-WP/8332 - 11/09/08)

Ref. ICAO Doc 9859 Safety Management Manual (SMM) Second Edition – 2008 (Advance edition – unedited)

This paragraph is not coherent with ICAO requirements and guidance material regarding SMS.

The 4 ICAO principles are not explicitly stated (safety policy & objectives, safety assurance, safety promotion). The new scheme proposed by the Agency would be detrimental and a burden for operators that have already started to implement a SMS based on ICAO requirements.

e.g.1 : "Proactive hazard identification processes should be the formal means..."

ICAO advocates for the combined use of predictive, proactive and reactive processes to perform hazard identification.

e.g.2: There is no reference to contracted activities in the safety risk management AMC 2 to OR.GEN.200(a)(2). However, contracted activities are mentioned in AMC 2 to OR.GEN.200(a)(3) Management System - 8. Documentation c. Management Manual. This is not coherent.

e.g.3: AMC 2 to OR.GEN.200(a)(2) Management System 1. Hazard identification processes: Confidential reporting systems should be based on established human factors: It would be informative for operators and competent authority to mention published references to such principles.

e.g.4: The AMC lacks any reference to the mitigation of risk to a level "as low as reasonably practicable". This reference is fundamental to any risk mitigation strategy. Otherwise the operator runs the risk of unbounded responsibility for any danger encountered in operations.

#### **Develop AMC based on ICAO material**

comment

#### **AMC (1) to OR. GEN.200 (a) (2)**

##### **1.**

#### **Insert "proactive" in front of hazard identification**

##### Explanation:

Proactive hazard identification based on established mission preparation processes is a vital process for small operators, because they normally operate to a large number of airfields –all differently equipped to varying standards of safety. Indeed, some are even outside controlled airspace and are served on an irregular schedule, requiring specific additional safety practices to be identified in advance and observed if the increased risk is to be managed effectively.

comment by: *European Gliding Union (EGU)*

AMC OR.GEN.200 (a) (1) Management system

The aero club/federation environment does not know a formal management/senior management structure. The present structures have proven that they are fulfilling the needs of pilot training.

AMC OR.GEN.200 (a) (2)

AMC OR.GEN.200 (a) (3)

AMC OR.GEN.200 (a) (4)

AMC OR.GEN.200 (a) (7)

As the definition of a "small" organisation is not fact based, all related items must be reviewed.

The given details are out of proportion.

Reference: AMC OR.GEN.200 (b) – Size, nature and complexity of the activity. This AMC mentions a kind of definition for "small" organisation for the first time in this document.

"Employed" is used again suggesting that the whole AMC material is only good for commercial application.

Training is given in a gliding club by instructors who are volunteers.No contract exist between the instructor and the club, except that he/she is a member.

In our clubs the mentioned number of "20" makes no sense as these

instructors are volunteers taking part in the club activities when they have time to do mainly on the weekends or during holidays. Large clubs may have up to 30 instructors giving training on maybe 60-80 days a year altogether, to maybe 5-10 students.

In our organisation we cannot work with the term "FTE" or full time equivalent. As no financial interest is involved training is not time critical but student focused and thereby leads to very well trained individuals.

comment 1178

comment by: Danish Balloon Organisation

**AMC 1 to OR.GEN.200(a)(2):**

We suggest that the AMC be amended as follows:

**AMC 1 to OR.GEN.200(a)(2) Management System**

SAFETY MANAGEMENT SYSTEM – SAFETY RISK MANAGEMENT

SMALL ORGANISATIONS and **ORGANISATIONS RUN BY NATIONAL AEROCLUB ASSOCIATIONS FOR MEMBERS ONLY**

1. The safety risk management system for small organisations and **organisations run by national aeroclub associations for members only** should include hazard identification, risk analysis and mitigation process, but would be expected to do so in a simplified manner.

2. The safety risk management system may use hazard checklists or similar risk management tools or processes, which are integrated into the activities of the organisation.

Justification: National aeroclub associations should be given same conditions as "Small Organisations".

comment by: Fédération Française Aéronautique

FFA strongly supports the proportionate rule applicable to "Small organisations" applied in this AMC.

Nevertheless, the words "in a simplified manner" must be clearly defined, and the applicability to "Very small" organisations added (see our proposed definition in the FFA comment on page 1 above).

comment 1681

comment by: GE Aviation

The AMCs appear to be structured to provide a different standard of safety

based on the organization size. The process of safety monitoring should not be tied directly to organization size; other factors such as the criticality of the product and the existing internal disciplines within the organization may be more relevant. Ideally, the safety monitoring system should be set up so that organizations which are managing their risks less well would be influenced to improve their internal processes, and organizations with good risk management processes could continue their existing process.

comment 1792

comment by: ACI EUROPE

The specific distinction between *small organisations* and *other organisations* in the AMC makes it necessary to provide a definition of "small" in this regard. No such definition is offered in the draft decision.

comment 1957

comment by: Ryanair

Comment

AN ATO that is a subsidiary of an AOC holder which has an established SMS should be permitted to be included in the AOC SMS structure. Where specific needs arise out of a particular training activity e.g. aircraft training during a Type Rating course, the AOC SMS must recognise this and include it in its system.

comment 2000

comment by: Arbeitsgemeinschaft Deutscher Verkehrsflughäfen e.V.

The specific distinction between *small organisations* and *other organisations* in the AMC makes it necessary to provide a definition of "small" in this regard. No such definition is offered in the draft decision.

comment 2379 

comment by: Klaus HARTMANN

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)

2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.

3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren

und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren. Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freiballonführer BPL/LPL(B)' geben.**

Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini – ATO allgemeiner Art möglich.

Für Mini – ATO's BP L/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manualls' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini –ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini – ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini – ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch senior examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.

Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportflarten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglich sein.

Safety Management Systems and Compliance Management Systems

change all over the document SMS and CMS by QMS

*Alteon comment:*

In general considered more adequate Quality Management Systems naming convention which captures both concepts of safety and compliance

comment

67

comment by: British Gliding Association

This requirement is disproportional and entirely unsuitable to non-commercial, fundamentally volunteer resourced gliding flight training that has a history of high quality oversight by gliding federations.

All gliding federations within the EU train pilots to a minimum of the ICAO Annex 1 requirement. The supporting structure, including flight instructor and examining resources have been developed to meet safety, management and

pilot standards needs. There is no safety case that would require anything other than a standardised approach.

The requirements within AMC 2 to OR.GEN.200 (a) (2) are disproportionate and should not apply to a gliding approved training organisation within an air sport federation recognised by the competent authority.

comment 95

comment by: Keven BAINES - MD Baines Simmons Limited

**AMC 2 to OR.GEN.200 (a) (2) Management System**

The SMS requirements for an organisation are specifically detailed in OR.GEN.200 (a) (2) and the AMC to OR.GEN.200 we are extremely surprised, and disappointed that the OR Gen rules are not at NPA at the same time concerning Parts 145 and M G. It is our belief that the goal with SMS is to generate an integrated Safety Management System, whereby the Operator focussed SMS will deliver performance based, proactive and systematic hazard management from its threat generators (maintenance, airworthiness management, ground Ops etc.). We strongly believe that this is a major flaw in this rulemaking round, and will result in a fragmented (and traditional compliance) approach, going against all that we desire from an integrated *system safety* approach to hazard identification and risk reduction.

**AMC 2 to OR.GEN.200 (a) (2) Management System Para. (1) (d)**

confidential reporting systems should be based on established human factors principles. Does this imply that effectiveness is likely to result from the application of fair culture that ensures all staff feel that occurrences and errors can be reported openly without fear of inappropriate action. And that this does not advocate for a 'blame free' approach? If it does, we firmly believe that this needs to be laid out in clear terms in the rule or AMC. We know from our industries' significant (and successful) experience of Maintenance Human Factors and Error Management Programmes (resulting from EASA Part 145 rules) that what we tend to refer to as a *Just Culture* is a principal enabling elements of safety reporting.

We believe that the AMC, should go into more detail in terms of establishing a clear framework that is likely to deliver (*near-miss* and error) healthy reporting that results in the learning culture we desire from our SMS.

comment 97

comment by: Keven BAINES - MD Baines Simmons Limited

3. Internal safety investigation Para. a. The scope of internal safety investigations should include occurrences that are not required to be investigated or reported to the CA. We are of the opinion that a Safety-oriented event investigation process is a vital element to effective safety management. As such we propose the following features be listed in the AMC:

Investigators should be trained in Human Factors, Investigation techniques, interview skills, and event investigation tools such as the Boeing PEAT, and MEDA tools.

It is our experience that competent investigators with recency are the key to ensuring the organization gains the opportunity to live from the 'bottom of the iceberg' weaker warning signals particularly in terms of future risk.

**Comment:** Use of "Proactive hazard identification" is inappropriate as it is too limiting.

**Justification:** The identification of hazard is based on reactive, proactive and predictive schemes and therefore it should be stated as such for clarity in line with ICAO Doc 9859 V2.

**Proposed Text (if applicable):** a. Reactive, proactive and predictive schemes for hazard identification processes should be .....

comment

773

comment by: European Business Aviation Association (EBAA)

**AMC (2) to OR. GEN.200 (a) (2)****Para 4.****Add "See Guidance material"****Explanation**

Trend analysis relies on volumes of reporting, which are, in GA/Corporate operations, normally insufficient to draw meaningful conclusions. The use of Key Performance Indicators (such as the CAA's Significant Seven) used as standard in Airlines, are not so well suited for use elsewhere. A more suitable means of measuring and monitoring safety is needed for the GA/Corporate environment, including the sharing of safety data and the lessons learned (e.g. shared usage of analysed FDM data). Here too GM material is needed for small operators as already recommended under Para 2c of **OR. GEN.200 (a) (1)** to

ensure they are using appropriate performance measures that allow them to track and measure the results of their safety programme. In short, in developing their SMS, operators must identify their safety objectives and then collect data that allows them to measure the results of their efforts. If a huge amount of nugatory effort is not to be expended in developing Safety PIs from first principles, PIs that may be of doubtful benefit and even counter-productive, they need high quality GM on this, if necessary based on recognised industry best practice.

comment 774 comment by: *European Business Aviation Association (EBAA)*

**AMC (2) to OR. GEN.200 (a) (2)**

**Para 5. (A)**

**Amend 5.a) add ne w sentence: "Change Manage ment is e specially important for small operators who are often i n an almost c ontinuous process of change as they develop and grow"**

**Explanation:**

Change Mgmt is essential for small organisations, which are likely to be introducing new A/C or equipment, new routes and even changing the dimensions of their business by changing from short haul to long range operations, each activity with the potential to introduce new hitherto unmanaged risks.

comment 781 comment by: *European HF Advisory Group*

**Page No: 24**

**Paragraph No:  
AMC 2 to OR.GEN.200(a)(2) 1(d)**

**Comment:**

"Confidential Reporting systems should be based on established human factors principles....." Such a definition needs further clarification. Confidential reporting systems to be effective will need a just culture to be in place and the wording should reflect this.

**Justification:**

Requirements needs to be clearly defined to remove any ambiguity.

**Proposed Text (if applicable):**

Confidential reporting systems should enable and encourage free and frank reporting of any potentially safety related event including an effective feedback process. This will be facilitated by establishing a just culture where personnel are not inappropriately punished for reporting or co-operating with investigations.

comment 857 comment by: *NATS*

1 This section is headed "Hazard identification processes" yet is confusing proactive and reactive sources of potential and real hazards with some analysis and lesson dissemination.

1a. This is about the HI process yet associated risks are identified as part of this process. Risk assessment follows in 2.

1b. What action should be taken as a result? There appears to be no purpose in doing this. Once hazards are identified shouldn't they be mitigated?

1c. To whom should the information be distributed and to what effect?

1d. If this is truly a confidential reporting system then the feedback should be to the reportee only. Lessons learnt from the report should be disseminated as appropriate with the reportee remaining anonymous.

2a. Is the probability determined in a qualitative, quantitative or can both approaches be used when appropriate? The probability and severity apply to consideration of the hazard and the outcome which becomes the risk (a combination of probability and severity).

2b. It should read as either "...safety risk tolerability..." or "...safety risks tolerability's..."

4a. AMC to OR.GEN.200(a)(1) 2c. refers to "The safety objectives and performance standards should be linked to the safety performance indicators, safety performance targets and safety requirements." Should these be the safety monitoring and measurements rather than direct comparison with the safety policies and objectives as it is unlikely that the safety policy and objectives will be expressed in ways that are directly comparable with the performance data?

4a. Is it possible to have more than one safety policy? AMC to OR.GEN.200(a)(1) seems to imply that there is only one ("The safety policy should....")?

4c. Does not AMC 1 to OR.GEN.200(a)(2) cater for small organisations? If not what are the criteria for the size of the organisation and the complexity of activities?

5a. The results of the formal process for change needs to be documented in a formal way (a record).

5a. Should it be "...affect the safety related activities of the organisation"? Otherwise it applies to all activities (e.g. finance).

General:

There appears to be significant omissions in the SMS as outlined in the AMC.

Firstly regarding the documentation of the results of safety assessment. Such documentation is very important in providing assurance that all relevant safety issues have been satisfactorily dealt with e.g. ICAO Doc 9859 (chapter 13, STEP 7 states that "*The purpose of the safety assessment documentation is to provide a permanent record of the final results of the safety assessment, and the arguments and evidence demonstrating that the risks associated with the implementation of the proposed system or change have been eliminated, or have been adequately controlled and reduced to a tolerable level*".

Secondly, whilst the management of change is addressed, the need for a

documented rationale (a record) that the current operation is safe is a key safety assurance item and the means by which the risk associated with any change can be assessed and mitigated.

comment by: INAER

**AMC 2 to OR.GEN. 200 (a) (2).1b:**

**".. should be assessed, analysed, reported, the data collected and stored".**

Suggested:

**".. should be reported to the Safety Manager, the data collected, stored, analysed and assessed,"**

Argument: in order to specify the actions in the right sequence, and clarify to whom must be the hazard reported.

comment 929

comment by: INAER

**AMC 2 to OR.GEN. 200 (a) (2).1c**

**"Information provided by analysis should be distributed"**

Suggested: **"Information provided by analysis should be distributed to the Safety Manager, and if applicable, to the Safety Review Board and personnel affected."**

Argument:

Not everybody must be aware of every single risk assessed in the company, and communication requirements are already specified in AMC " to OR.GEN. 200.(a) (4).2

comment 930

comment by: INAER

**AMC 2 to OR.GEN. 200 (a) (2).3**

**This question should be tackled in AMC to OR.GEN. 200 (a) (5).3,** because it is clearly not a means of compliance of OR.GEN.200. (a) (2).

The matter "internal safety investigation" does not develop an acceptable means of compliance of OR.GEN.200.(2) requirement.

comment 931

comment by: INAER

**AMC 2 to OR.GEN. 200 (a) (2).4; + AMC 2 to OR.GEN. 200 (a) (2).6:**

it is suggested that a new **OR.GEN. 200 (a) (9)** is added, requiring:

**"methods for monitoring, measuring and analysing safety performance".**

and this text be part of an AMC to OR.GEN.200 (a) (9)

Argument:

"Safety performance monitoring and measurement" and "continuous improvement of the safety system", don't develop an acceptable means of compliance of OR.GEN.200.(2) requirement (which deals only with safety hazards and risk assessment)

The proposed activities have to deal very much with activities related to "management", which goes further than Compliance Assurance and compliance control.

Therefore, both AMC 2 to OR.GEN. 200 (a) (2).4 and AMC 2 to OR.GEN. 200

(a) (2).6 should be AMC 2 to a new OR.GEN. 200 (a) (9)

comment 1086 comment by: EUROPEAN GLIDING UNION

The proposals are disproportionate. As no formal definition of a "small" organisation exists, all related items should be reviewed.

comment 1160 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**Specific to maintenance industry**

We do not find CLEARLY the 4 pillars of ICAO ( Safety Management Manual, Doc 9859 AN-460) :

- safety policy
- safety risk management
- safety assurance
- safety promotion

- 6 Continuous Improvement of the Safety Management System
- 6a Delete "identified through safety assurance activities"

comment 1319

comment by: Ryanair

**AMC 2 to OR.GEN.200 (a)(3) – Management System  
Safety Management System – Organisation and Accountabilities****Comment**

This detail of the AMC is overly prescriptive and does not take account of established individual operator variations that have been developed in accordance with National and ICAO Guidance. The introduction of this requirement would put an unnecessary administrative burden on Operators, the Agency and the Competent Authorities.

**Proposal**

The management system of an organisation should encompass safety by implementing the following:

1. SMS Organisational Structure
2. A manager with overall responsibility for the SMS
3. Safety review board
4. Safety Action Group
5. Safety accountabilities and responsibilities
6. SMS Implementation Plan (if applicable)
7. The emergency response plan
8. Relevant documentation

All detailed information should be moved to guidance material

**AMC to OR.GEN.200 (a)(5)**

**Comment**

A retention period for occurrence reports is required

**Proposal**

Occurrence reports should remain the database *for a period of 5 years* when judged.....

**OR.GEN.200 (a)(6) – Organisation Manual  
AMC to OR.GEN.200 (a)(6)**

**Comment**

Any reference to an 'organisation manual' which insinuates that a standalone document is required must be removed. The information required may be available in a number of documents. Any requirement which introduces duplication must be avoided.

**Proposal**

(a)(6) Details of the organisation structure of the approved organisation including management system processes.....

- comment 1509 comment by: *BMVBS (MoT Germany)*
- Since the text of OR.GEN.200 needs a complete rewriting the same applies to all AMCs and GMs to OR.GEN.200.
- Recommended amendment of the text:
- (complete redrafting necessary)
- 
- comment 1631 comment by: *British Airways Safety & Security*
- Replace the whole of section 1d with **Reporting systems should be confidential and include an effective feed back process.** The original wording does not make sense by referring to established human factors principles (unless these are fully explained, which is probably not sensible).
- 
- comment 1632 comment by: *British Airways Safety & Security*
- Replace **analysed, reported, the data collected** with **analysed, reported and the data collected** in section 1b.
- 
- comment 1633 comment by: *British Airways Safety & Security*
- Section 3a should be reworded as follows. **The scope of internal safety investigations should extend beyond those required to be reported to the competent authority.** This is because the original wording is not clear.
- 
- comment 1634 comment by: *British Airways Safety & Security*

Section 6 – wording should be changed from **the safety system** to **the management system**.

comment 1635 comment by: *British Airways Safety & Security*

Section 6a – The concept of continuous improvement is where Safety performance monitoring and measurement help an organisation meet its safety policies and objectives.

(ICAO concept of Safety Plans). The AMC implies that continuous improvement is the process of rectifying below standard performance identified through safety assurance. British Airways does not consider this assumption to be correct.

Proposed rewording section 6a as follows:

**6. Continuous improvement of the safety system.**

**a) i) Organisations should include within their safety policies and objectives continuous improvement objectives.**

**ii) Through regular review and evaluation, management should track continuous improvements in safety management and ensure that the safety system remains effective and relevant to the organisation's operation.**

**a. i)**

comment 1682 comment by: *GE Aviation*

Further clarification is sought on the statement "information provided by analysis should be distributed". It is not clear what information is intended, to whom it should be distributed, and to what purpose.

The process of safety performance monitoring should not necessarily be proportional to the size of the organization; the effectiveness of existing risk management processes may be more relevant to an overall objective of managing risks throughout the aviation system.

It is strongly recommended that there be no attempt to evaluate "safety performance" in individual performance appraisals. Safety performance is generally the result of a team activity; attempting to define a metric which is closely linked to safety, not subject to random variation, measurable in real-time, and under the influence of single individuals, would be impractical.

- 5.a Management of Change: internal and external change must be specified since in the case of aerodrome operators the scope needs to be clearà aerodrome operator vs aerodrome and external change may

affect other aerodrome users with similar requirements in the envisaged Part OR, Part GEN

- "Adverse effect on safety" must be specified or changed into "unacceptable effect on safety"

comment 1985 comment by: *Arbeitsgemeinschaft Deutscher Verkehrsflughäfen e.V.*

- 5.a Management of Change: internal and external change must be specified since in the case of aerodrome operators the scope needs to be clearà aerodrome operator vs aerodrome and external change may affect other aerodrome users with similar requirements in the envisaged Part OR, Part GEN
- "Adverse effect on safety" must be specified or changed into "unacceptable effect on safety"

comment 2017 comment by: *AIRBUS*

The paragraph 1d. reads "d. Confidential reporting systems should be based on established human factors principles including an effective feedback process."

This sentence is vague and the meaning is difficult to understand. If EASA wants any specific aspects to be implemented in relation to the Reporting System, they should be explicitly listed.

The current text does not provide a clear guidance.

comment 2021 comment by: *AIRBUS*

The paragraph 4b (i to v) lists the means for verifying safety performance against policies & objectives. However, these means should be no different from the list of recommended Hazard Identification methods/tools/processes. There are some overlaps with some of the listed items whereas some others are missing, e.g.:

- Safety reporting (i) produces trends (iii)
- Safety reporting (i) is mentioned whereas Flight Data Monitoring is not mentioned

Furthermore, the most advanced level of Performance Monitoring is omitted: risk-based Safety Performance Measurement.

A consistent approach should be adopted here. The new text could read:

"Safety Performance monitoring should be supported by a combination of reactive, proactive and predictive safety data sources, and could take advantage of, for example:

- safety reporting
- flight data monitoring
- safety surveys

Safety Performance measurement based on Operational Risk Measurement is recommended."

comment 2022 comment by: *AIRBUS*

The title of the paragraph 6 reads "6. Continuous improvement of the safety

system." The content of the paragraph in a. and b. nevertheless discuss improvement of SAFETY, i.e. improvement of the company Safety Performance or Safety Level.

There is a mismatch between the title and the underlying text.

The title of the paragraph 6 should be modified into "6. Continuous improvement of Safety Performance."

p. 25-26

comment 49

comment by: *George Knight*

This AMC is attempting to impose inappropriate and disproportionate controls onto small ATOs that are clubs. It is attempting to extend EASA's remit into that belonging to other government agencies such as the UK's HSE. Specifically:

-2 This really is not relevant to a small club. All that is needed is an A4 notice telling members what to do and who to contact in the case of an accident or emergency.

-3 This is not relevant to small recreational ATOs.

comment 399

comment by: *Civil Aviation Authority of Norway*

An AMC for small organisations seem unnecessary because the elements and principles are applicable to all organisations, and the flexibility provisions are already described in the IR.

comment 504

comment by: *UK CAA*

**Page No:**

25

**Paragraph No:** AMC 1 to OR.GEN.200(a)(3) Para 1a

**Comment:**

Smaller organisations should identify a safety manager who is responsible for the safety management system.

**Justification:** Although the smaller organisations would not want to employ a fulltime safety manager it is important that someone is the focal point for safety matters even if this is a part time role or is a person that has another operational role within the organisation.

**Proposed Text (if applic able):** add a paragraph to 1a. The organisation should identify a person that fulfils the role of safety manager and who is responsible for co-ordinating the safety management system. This person may be the Accountable Manager or a person with an operational role within the organisation.

comment 505

comment by: *UK CAA*

**Page No:**

25

**Paragraph No:** AMC 1 to OR.GEN.200(a)(3) Para 2a

**Comment:** Smaller aerodromes may utilise the local authority emergency services to lead on their emergency plan. The wording on Coordination of Emergency Response Planning will need to reflect that, either here or in the eventual "Aerodromes" chapter.

**Justification: Needs to reflect application to variety of organizations.**

**Proposed Text (if applicable):** The organisation should, in co-operation with other stakeholders, develop, coordinate and maintain an emergency response plan that ensures orderly and efficient transition from normal to emergency operations, and return to normal operations.

AMC 1 to OR.GEN.200(a)(3)

3. Documentation a. should read:

The organisation should develop or **adopt** and maintain SMS.....

We believe that a safety management system can be developed more general, and reused in more similar organisations.

comment

775

comment by: *European Business Aviation Association (EBAA)*

**AMC (1) to OR. GEN.200 (a) (3)**

**3. (B)**

**Add: For smaller operators it is acceptable to combine the SMM and the Quality annual (QM) into single Safety and Quality Manual**

For small operators to require that the SMM is a separate manual imposes additional and unnecessary bureaucracy that is likely to hinder rather than assist the management of safety. Additional oversight and sign off will be needed and the more separate manuals there are, the less likely it is they will be used in day to day business. If all aspects of the SMS (including Risk Management perhaps as an Appendix) are documented and implemented within a single Safety and Quality Manual that is already in daily use as a Quality manual, it is far more likely they will be adopted as day to day part of the business.

comment

858

comment by: *NATS*

A simplified manner compared to what? Simplification is a relatively comparative term that needs an extant management system against which a measure of simplification can be made.

1. Even in a small organisation safety accountabilities extend beyond hazard identification, risk assessment and mitigation (e.g. incident investigation, lesson dissemination, etc.).

2. Should this AMC address the safety accountabilities associated with transition from normal to emergency operations? It currently reads as a business continuity requirement (e.g. the use of "efficient" and no mention of safety). Whilst not necessarily for inclusion here it should be noted that the

emergency operations should be tolerably safe with associated safety documentation either already developed or that it is required to be developed before operations can commence.

3. What is the difference between an SMS and a SMM? 3a requires SMS Documentation describing policy, procedures and processes (arguably the processes should be in the procedures). 3b requires that the SMS documentation should contain an SMM. Therefore, what, given the content of the SMS, is left to go into the SMM? It would make more sense if the SMS were the application of the documented safety policy, etc which are documented in a SMM.

comment

932

comment by: *INAER*

**AMC 1 to OR. GEN.200 a.(3).3.a**

**"...Develop and maintain SMS documentation to describe the safety policy, procedure and processes"**

Suggested:

**"Develop and maintain SMS documentation to describe the safety structure, and processes"**

Argument:

The processes are contained in the procedures, which are part of the SMS documentation (see AMC 1 to OR. GEN.200 a.(3).3.b) , and the policy is technically not a document of the system, but a record of a requirement for the top management (that can be part of the SMS manual, procedures or not).

comment

933

comment by: *INAER*

**AMC 1 to OR. GEN.200 a.(3).3.b**

**"The SMS documentation should contain a safety management manual (SMM)."**

Suggested:

**"The SMS documentation should contain a safety management manual (SMM), related procedures, technical instructions, SOPs, guides and forms."**

Argument:

The SMS is a management system, and therefore its documentation has to be hierarchied in Manual-procedures- technical instructions-SOPs-forms-guides

comment

934

comment by: *INAER*

**"The SMM may be a chapter in the organizations manual"**

Suggested:

**"The SMM may be either a chapter in the organizations manual, or reference the organizations manual as the top level organization document "**

Argument:

If it is decided that the SMM is not part of the organizations manual, it should be dependent of it, as a second level manual in the organization.

comment 1679 comment by: *Fédération Française Aéronautique*

FFA strongly supports the proportionate rule applicable to small organisations applied in this AMC.

Nevertheless, the words "in a simplified manner" must be clearly defined, and the applicability to "Very small" organisations added (see our proposed definition in the FFA comment on NPA page 1 above).

comment 1683 comment by: *GE Aviation*

The wording "transition from normal to emergency operations" is ambiguous. It is not clear whether this applies to emergency operations related to the aviation product or service, or a broader set of emergency operations including local emergencies like natural disasters, unrelated to the aviation system.

comment 2330 comment by: *Europe Air Sports PM*

The proposals are disproportionate. As no formal definition of a "small" organisation exists, all related items should be reviewed.

comment 2379  comment by: *Klaus HARTMANN*

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland.

Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 - 08:00 loc und 19:30 - 21:30 loc)

2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.

3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern

führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freiballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

Für Mini – ATO's BP L/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manualls' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini – ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini – ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini – ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch senior examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.

Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Piloten anwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart GEN - Section 2 - AMC 2 to OR.GEN.200(a)(3) Management System**

p. 26-28

comment 98

comment by: Keven BAINES - MD Baines Simmons Limited

AMC 2 to OR.GEN.200 (a) (3) para 2. The Safety Manager

We feel that there is a need to clarify the expectations with regards to competencies for a safety manager? In other words the regulatory oversight aspects of competency acceptance for safety manager are missing. How would the Competent Authority accept a Safety Manager, would it be as a post holder? We would expect this key person to possess more in terms of safety qualifications than merely being an experienced pilot. We believe that selection of this key position, by the approved organisation and acceptability of by the competent authority inspecting staff is vital to the successful implementation of a *performance based* safety management system.

We think that further clarification is required for the role and relationship between the functions of SMS and the compliance monitoring function – relevant guidance for the organisations as well as for the regulators. Broadly speaking what is EASA's view of the difference and/or synergy's between Safety Assurance and Compliance Monitoring functions.

Sub Para. ix we recommend the following amendment to more clearly give indication as to one typical role of the safety manager:

ix. assist line managers with hazard identification, risk assessment and control (HIRAC) process

Sub Para. xi we recommend the following amendment to consistently demonstrate the desired proactive nature of the Safety management System:

xi be involved in hazard (reported that have the potential to cause losses), occurrence, and accident investigations; and

comment 99 comment by: *Keven BAINES - MD Baines Simmons Limited*

5. Safety accountabilities and responsibilities. For reasons of consistency and clear messaging we recommend adding the word safety in paragraph a. To read as follows:

a. The organisation should define the safety accountabilities of the accountable manager and the safety responsibilities of key personnel.

comment 100 comment by: *Keven BAINES - MD Baines Simmons Limited*

Training and communication on safety

We are of the opinion (as with EASA Part 145 with regards to Human Factors training GM 145.A.30 (e) Personnel requirements (Training syllabus for initial human factors training)) that this section should include an outline syllabus as follows:

- The management team should be trained to understand the principles on which the safety system is based.

Training should ensure that managers and supervisors are familiar with the principles of the safety management system and their responsibilities and accountabilities for safety.

**All staff should receive a basic introductory course essentially covering:**

Safety training should ensure that staff are competent in the following:

their role in the elements of the safety management system pertinent to their duties.

how the organization's safety management system functions

the principles on which the safety system is based

and familiar with the principles of the safety management system and their responsibilities and accountabilities for safety.

safety philosophy, safety policies and safety standards

disciplinary action vs. safety hazards, integrated nature of safety management, risk management decision making, safety culture, etc.

Importance of complying with the safety policy and with the procedures that form part of the safety management system

Reporting accidents, incidents and perceived hazards

Lines of communications for safety matters

Feedback and communication methods for the dissemination of safety information

Unique hazards facing operational personnel

Any specific safety initiatives, such as: Flight Data Analysis (FDA) programme; LOSA etc

Seasonal safety hazards and procedures (winter operations, etc.);

Emergency procedures

comment by: DGAC FRANCE

**AMC2 OR.GEN.200.A.3**

The function of the safety manager to "monitor compliance" (AMC 2 to OR.GEN.200(a)(3) – 2. xii. monitor compliance) is redundant with the general function of OR.GEN.200 (a)(7).

Organisations may want to separate SAFETY functions and MONITORING functions. The monitoring function should not be solely the responsibility of the safety manager.

DELETE

AMC 2 to OR.GEN.200(a)(3) – 2.

[...]

~~xii. monitor compliance.~~

comment 266

comment by: ECA- European Cockpit Association

Delete line:

2. The safety manager.

b. The functions of the safety manager should be to:

~~vi. plan and organise staff safety training;~~

~~vii. vi~~

Justification:

The function of a Safety Manager should not include responsibility for training. Training should always be the responsibility of the respective line managers.

Paragraph 7. Not required by the rules

comment 400

comment by: Civil Aviation Authority of Norway

The introduction of a safety manager seems to be misplaced. If a safety manager is required it should be specified in the IR.

comment 401 comment by: *Civil Aviation Authority of Norway*  
 The establishment of a safety action group may be inappropriate even in “non-small” organisations, and therefore this should be transferred to GM material.

comment 402 comment by: *Civil Aviation Authority of Norway*  
 The introduction of an ERP should be a part of the IR.

comment 403 comment by: *Civil Aviation Authority of Norway*  
 It seems inappropriate to make the SMS implementation plan a part of the SMS itself. Even if a plan is useful, the focus should be on the effect of the SMS, and not so much on the planning

comment 404 comment by: *Civil Aviation Authority of Norway*  
 Comment to (8);  
 The description of the documentation requirements does not correspond with the content of the organisation manual required by AMC OR.GEN.200(a)(6)

**Proposed Text (if applicable):** add xii Safety Training

comment 513

comment by: UK CAA

**Page No:**  
27

**Paragraph No:** AMC 2 to OR.GEN.200(a)(3) para 6 a. SMS implementation plan

**Comment:** Limiting the implementation plan to 2 years does not recognise the complexity and timescales involved in establishing a fully functional SMS. Due consideration should be given to a phased implementation approach as detailed in the ICAO Doc 9859.

**Justification:** Limiting an implementation plan to 2 years is more likely to result in a SMS that looks good on paper but is not necessarily effective. EASA needs to consider a phased implementation approach ie assessment for the basic elements of an SMS and then an assessment for a fully functional SMS. For SMS implementation within organisations with no previous SMS experience a 5 to 6 year implementation would be more realistic.

**Proposed Text (if applicable):** Change the last sentence to read: The plan should be endorsed by senior management and the elements of an SMS should be in place within a period of 2 years.

comment 514

comment by: UK CAA

**Page No:**

comment by: *European HF Advisory Group***Page No: 26****Paragraph No: AMC 2 to OR.GEN.200 (a)(3) paragraph 2 (b)**

**Comment:** Further clarification is required for the roles and relationship between the functions of SMS and QMS (or compliance monitoring function) both for organisations and the competent authority. Broadly speaking what is EASA's view of the difference and/or synergies between Safety Assurance and Quality Assurance (Compliance Monitoring functions), such that our industry does not deliver yet another compliance based system

**Justification:** Clarification is needed to remove any confusion and to ensure that SMS does not become a compliance based system. There is likely to be a tendency for existing Quality Managers to become the safety manager with the risk that SMS will be treated in a similar way to a QA system.

**Proposed Text (if applicable):** guidance material required

comment 859

comment by: *NATS*

This AMC appears to address more than is the scope of the related IR (OR.GEN.200 (a) (3)). The IR only refers to safety accountabilities and only for senior managers.

1a. The use of the word "typically" implies that some variation is allowed. If such variation is applied by an organisation how does that variation relate to the remaining AMCs which specifically address the safety manager, safety review board and the safety action group?

2a. How is the effectiveness of the SMS to be determined? There does not appear to be an AMC or GM on this requirement.

2b. i. The "implementation plan" is assumed to be the plan referred to in AMC2 to OR.GEN200(a)(6).

2b. ii. This task should reside with those senior managers responsible for the service delivery. Given that the safety manager is responsible for the SMS it does not seem appropriate that procedures and processes required by the SMS are conducted by the safety manager (i.e. the safety manager should ensure that the procedures and processes are complied with).

2b. v. This task should reside with those senior managers responsible for the service delivery. Given that the safety manager is responsible for the SMS it does not seem appropriate that procedures and processes required by the SMS are conducted by the safety manager (i.e. the safety manager should ensure that the procedures and processes are complied with).

2b. vi. Whilst it is incumbent for the safety manager to provide a level of staff safety training it is appropriate for other responsible managers to arrange staff safety training as appropriate for their areas of responsibility. It is appropriate for the safety manager to provide safety training for senior managers in the organisation (e.g. when an individual takes up a post that has safety responsibility). If the safety manager were to plan and organise safety training who would deliver it and how would its effectiveness be assessed?

2b. vii. In order to be able to provide "independent" advice the safety manager should not be required to undertake some of the identified functions (as noted in earlier comments) as it potentially compromises their position.

2b. viii. What is the difference between this and 2b.vii? Surely vii encompasses viii?

2b. ix. Assist line managers to do what?

2b. x. How does this oversight sit with 2b. ii. Which requires the safety manager to facilitate hazard identification (see earlier comment about inconsistencies in the function of the safety manager)?

2b. xii. Presumably this is to monitor compliance with the SMS? If not it isn't clear as to what is being monitored.

3a. The role of the Safety Review Board is to support the accountable manager in the discharge of their safety accountabilities.

3b. Only those heads of functional areas that have safety responsibilities.

3c. The Terms of Reference of the safety review board should be:

- to monitor and review the effectiveness of the safety arrangements in place in the organisation;
- to review the delivery of the organisation's safety objectives through its operations, structures and processes;
- to review the quality of the organisation's safety performance by means of an examination of internal and external audits, reports, benchmarking and best practice comparisons;
- to monitor the implementation of agreed and improved safety enhancement programmes against their objectives, programme and effectiveness;
- to make recommendations on means for improving the Company's safety management systems and safety performance, as necessary.

4b. The Terms of Reference of the safety action group should be:

- To ensure that safety risks and safety issues are proactively identified and effectively managed.
- To monitor safety performance against company safety targets and ensure that appropriate action is taken.
- To ensure safety improvement actions across the company are prioritised, coordinated effectively, and that responsibility for follow up action is allocated.
- To own and support Safety Management System development, and specifically to review Safety Policy at least every three years, taking into account best safety practice in similar industries.
- To provide direction for the continuous improvement of safety, including the recognition of best practice and implementation of lesson learning from internal and external sources.
- To ensure that the safety accountabilities of the accountable manager are reviewed regularly and maintained.
- To co-ordinate and track actions and recommendations arising from the safety review board and corporate issues raised by external bodies.

5a. Safety accountabilities and responsibilities should be documented as part of the SMS and reviewed on a regular basis.

7. Should this AMC address the safety accountabilities associated with transition from normal to emergency operations? It currently reads as a business continuity requirement (e.g. the use of "efficient"). Whilst not necessarily for inclusion here it should be noted that the emergency operations should be tolerably safe with associated safety documentation either already developed or that it is required to be developed before operations can commence.

8b. AMC to OR.GEN.200(a)(1) also states what a safety policy should consider. It is confusing to have this in two places with a degree of duplication.

8c. iii It has been previously inferred that only the accountable manager has safety accountabilities; this implies there may be others.

8c. iv The key safety personnel should be those senior managers with safety responsibilities.

8c. x Management of change should also include organisational change with consideration of safety accountabilities and responsibilities.

8c. There is also a need for inclusion of Incident Reporting & Investigation as well as safety assurance documentation

**AMC 2 to OR. GEN.200 a.(3).2.a**

"The safety manager should be responsible and the focal point for the safety development, administration and maintenance of an effective SMS..."

Suggested:

**"The safety manager should be responsible and the focal point for the**

**safety administration and maintenance of an effective SMS ...”**

Argument:

Top management is responsible for the development of an SMS, and it can be developed by an external consultant, or an internal specific Department, but it should be optional for a company to give that responsibility to a specific function. It has to be bear in mind that safety managers are normally experienced pilots, with little or none experience with designing and developing management systems

comment

937

comment by: *INAER***AMC 2 to OR. GEN.200 a.(3).6.b****“SMS implementation plan – contents: ... safety reporting policy”**

Suggested:

**Eliminate “safety reporting policy”**Or specify **“safety reporting procedure”**

Argument:

As the SMS implementation plan already contains the safety policy, no special “safety reporting policy” should be included. A policy contains the commitments, and the framework for establishing objectives, and it should not be confused with “criteria, o procedures”.

comment

938

comment by: *INAER***AMC 2 to OR. GEN.200 a.(3).6-8**

It is suggested:

**Change OR.GEN.200.a to include: “A management system documentation”**

Argument:

This AMC develops an acceptable means of compliance for “safety accountabilities”, but it deals with matters that go beyond that scope, as the implementation plan, the emergency response plan and the SMS documentation that support the whole SMS.

comment

939

comment by: *INAER***AMC 2 to OR. GEN.200 a.(3).8.a****“Documentation should consist of:**

- o **Applicable regulations**
- o **Safety management system manual**
- o **SMS records**
- o **Records management”**

Suggestion:

**Documentation should consist of:**

- o **Documented statement of a safety management system policy and safety objectives**
- o **Safety manual containing :**
  - § **The scope of the system**
  - § **The documented procedures established for the management system, or references to the m,**

**including an amendment procedure, and**  
**§ A description of the interaction between the processes of the management system.**

- o **Documented procedures and SMS records required by Part OR**
- o **Documents required by the organization to be necessary to ensure the effective planning, operation and control of its processes**

Argument:

On the one hand, this requirement should be similar with ISO 9001;2008 (part 4.2.1 and 4.2.2). On the other hand, the "applicable regulations" is not part of the SMS documentation, but part of the external documentation that affects the system.

The term "record management" doesn't have any sense here, as it is dealt in OR.GEN.220, and the management of the record can be a procedure, but is not a type of an SMS of documentation.

comment

940

comment by: *INAER*

- 1) AMC 2 to OR. GEN.200 a.(3).8.c**  
**The contents of the SMS manual should include:**
- i. Scope of the SMS**
  - ii. Safety policy and objectives**
  - iii. Safety accountabilities**

Suggested:

- The contents of the SMS manual should include:**
- i. Scope of the SMS**
  - ii. Safety accountabilities**

Arguments:

a) There is no reason why the policy has to be in the Manual. ISO 9001:2000 already eliminated that requirement from the standard, as it proved to be a burden, not providing effectiveness. The requirement should be that the policy is distributed, understood, applied and maintained, but not that it is part of the manual.

It is much easier for a policy to be changed, if it is out of the manual (for example, in the WEB, or hanged at the wall), specially in integrated systems (as it is common in the industry), where the policy could refer to MOE, CAME, DOA manual, OM, SMS, Health and Safety Manual, Environmental Management Manual, ISO 9110 manual and ISO 9001 manual.

The authority could be notified in policy changes with a copy of the policy, and control afterwards its effective distribution to everybody in the company in the audits.

b) Objectives should not be inside the manual, for several reasons:

- o Objectives change from one year to another
- o Safety objectives are a record, after applying the "Objectives Procedure", but are not a document with requirements of the system itself.
- o Safety objectives don't have to be distributed at all levels in the organization. In fact, some safety objectives can be very sensitive.
- o When the manual is developed, there are probably no objectives which can be approved by the top management, as there is probably no safety performance monitoring in place.

**Relevant text:**

- 4. Safety action group.
- b. The safety action group should:

- i. oversee operational safety;
- ii. resolve identified risks;
- iii. assess the impact on safety of operational changes;
- iv. implement corrective action plans; and
- v. ensure that corrective action is achieved within agreed timescales

**Comment:**

Sub-structure as per NPA not required at all, as too prescriptive, and even faulty (e.g. 4.b.i oversee operational safety: an action group does not "oversee"). The terms of reference for such groups should be determined by the Safety Review Board, appropriate to the action case.

**Proposal:**

Replace 4. by "Safety action groups should be established where required based on a decision of the safety review board, and should typically comprise managers, supervisors and staff from relevant operational areas"

comment by: AEA

**Relevant text:**

## 8. Documentation

c. The safety management manual (SMM) should be the key instrument for communicating the approach to safety for the whole of the organisation and documents all aspects of the SMS, including the safety policy, objectives, procedures and individual safety accountabilities. The contents of the safety management system manual should include:

- i. scope of the safety management system;
- ii. safety policy and objectives;
- iii. safety accountabilities;
- iv. key safety personnel;
- v. documentation control procedures;
- vii. hazard identification and risk management schemes;
- viii. safety performance monitoring;
- ix. emergency response planning;
- x. management of change;
- xi. safety promotion; and
- xii. contracted activities.

**Comment:**

8.c. Is the Safety management manual a different manual than the safety management system manual as per 8.a.ii.? Clarification required

The documentations should be composed by safety policy, safety management manual.

Duplication of the requirement to include safety policy.

comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Specific to maintenance industry**

« The plan should be endorsed by senior management and completed within a period of 2 years. »

Why imposing a 2-year-limit knowing that it depends on the roganization intial situation and that it is a continuing improvement program. Once again, imposing 2-year-plans does not take into account organizations financial constraints.

comment by: *British Airways Safety & Security*

Section 3c. The Safety review board should not monitor the effectiveness of the implementation plan. It should monitor the effective of the management system though. Section 3c ii. should be reworded as follows:

3c ii. **the effectiveness of the management system; and**

comment 1640 comment by: *British Airways Safety & Security*

Section 2b. For clarity, the following items should be reworded.

Item vi should be reworded as: **oversee the planning and organisation of staff safety training;**

Item ix should be reworded as: **assist line managers in discharging their safety responsibilities;**

Item xii should be reworded as: **monitor compliance with the organisation's own procedures.**

comment 1644 comment by: *British Airways Safety & Security*

Section 4b, items iv and v should be amalgamated and reworded as follows, for clarity:

iv. **ensure that corrective action plans are implemented within agreed timescales.**

comment 1646 comment by: *British Airways Safety & Security*

It is not appropriate to include the implementation plan in the responsibilities of any group or body in the AMCs or GM. It is proposed that section 6 is deleted (and subsequent sections renumbered).

comment 1661 comment by: *CAA CZ*

AMC 2 to OR.GEN.200(a)(3), para 6. a., page 27

The plan should be endorsed by senior management and completed within a period of 2 years.

It should be clarified when the "SMS implementation plan" should be developed and signed. It should be clear if is required to sign prior to the issue of ATO approval, i.e. if it should be sent to the authority together with application for approval of ATO? The date from which 2 years to complete is counted - since date of signature of a plan or since the date of ATO approval?

comment 1684 comment by: *GE Aviation*

The AMC is unduly prescriptive on types of management structure. Other structures can be effective.

There should be no requirement to have a safety manual. Other forms of requirement flowdown can be as effective and may fit better with existing documentation.

comment 1692 comment by: *Ornulf LIEN*

*Comment:*

Item 6 in this AMC appears to be a "rule within the rule" regarding implementation period.

*Proposal:*

If a 2 year implementation period from the effective date of the regulation in general is intended, this should probably be described in the IR, e.g.:

**OR.GEN.200 Management system**

(a) An organisation shall establish ....

(3) within (... 2years ...) clearly defined lines of ....

Alternatively, and probably better if legally acceptable, it could be a separate AMC, to be deleted after two years.

*Justification:*

This should not be part of the "permanent" AMC unless it is intended that all new operators for the foreseeable future should have an "exemption" period of two years before the SMS part of the MS would have to be functional. This would probably be less than desirable.

If it is, however, intended to give existing operators adequate time to get the SMS up an running after transition to the new regulations, then it should probably be a separate AMC that could be taken out after the two year period has expired.

It should also be noted that this grace period is not given to small organisations.

4. Safety action group.

a. The safety action group should report to and take strategic direction from the safety review board; and should be comprised of managers, supervisors and staff from operational areas.

Comment:

Safety action group are not always mandatory.

Proposal:

a. *Safety action group should be established where required based on a*

*decision of the safety review board.* The safety action group should report to and take strategic direction from the safety review board; and should be comprised of managers, supervisors and staff from operational areas.

comment 2115 comment by: *Lufthansa CityLine GmbH*

To avoid misunderstandings following clarification would be helpful:

i. manage the **SMS** implementations plan

iii. **delete iii**, because it is part of the compliance managers (better quality managers) responsibilities

v. maintain **SMS** documentation

vi. plan and organise staff **SMS** training

**delete viii**. it is part of vii.

**delete ix**. a) there is no definition for line managers

b) the safety manager advices as already mentioned in vii.

xii. a) monitor compliance **concerning SMS** or better

b) **delete xii**. Because compliance monitoring is part of the compliance managers responsibilities (better part of the quality managers responsibilities) otherwise the compliance manager would have to report to the Safety Manager instead to the Accountable Manager.

**Paragraph No:** AMC 1 and AMC 2 to OR.GEN.200(a)(4) para 1 a&b

**Comment:** Guidance material needs to be developed to detail what should be included in Safety Training.

**Justification:** Without further clarity this will lead to inconsistency of the safety training whereas this is an important part of the process.

**Proposed Text (if applicable):** develop guidance material with the following text.

For operational staff the safety training should include:

SMS fundamentals and overview

Human Factors and Organisational Factors

Safety philosophy, safety policies and safety standards

Safety responsibilities and accountabilities

Organisation's SMS functions

Lines of communication for safety matters

Diciplinary Policy and Safety Culture

Safety reporting

Unique operational safety hazards

Seasonal safety hazards  
 Safety Initiatives ie FDA, LOSA etc  
 Emergency procedures

In addition to the above Operational and Senior Managers should also have safety training on:

Engaging staff in hazard reporting  
 Detailed knowledge of the Safety process including  
 Hazard identification, Safety Risk Analysis and Mitigation and Change Management  
 Active promotion of SMS  
 Performance measurement and establishing acceptable levels of safety  
 Internal communication

FFA basically supports the principle of proportionate rule applicable to “Very small” (see our proposed definition in the FFA comment on NPA page 1 above, namely, ATOs providing training for basic LPL, LPL, PPL, BPL and SPL) and “Small” organisations. But, as it is, the proposed rule is over-prescriptive.

So, FFA accepts the rule whether it would only apply to the “Head of Training”, not to “all the personnel”.

comment by: Klaus HARTMANN

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 - 08:00 loc und 19:30 - 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die

eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freie Ballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigter aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freie Ballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini - ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.**

**Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.**

comment 2441 comment by: *FlightSafety International*

There are differences between these AMC in verbiage regarding Training, e.g. Staff vs. Personnel etc. Please standardize to clarify.  
For "Other organizations", e-learning is not accepted for safety training programmes

No differences should exist in this aspect between small and other organizations.

comment 2446 comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*

EPFU points out that this AMC is not adapted and unrealistic for Small non commercial, non profit training organisations in which there is one person only : the "head of training".  
So EPFU thinks that another specific AMC must be proposed for that category of Small flight training organisation

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart GEN - Section 2 - AMC 2 to OR.GEN.200(a)(4) Management System** p. 28-29

comment 518 comment by: *UK CAA*

**Page No:**  
28

**Paragraph No:** AMC 2 to OR.GEN.200(a)(4) para 1 a&b

Comment: The rule requires training and competency for all personnel whereas the AMC focuses on safety training and safety competency. The AMC should cover both technical and non-technical i.e. safety training and competencies to ensure that not only have personnel received appropriate training but they have the skills and abilities to carry out their tasks and that their competency has been assessed.

**Justification:** Further guidance is needed to clarify the rule as competency is not just about training and the AMC could therefore be misleading.

**Proposed Text (if applicable):**

1. a. All staff should receive appropriate training including safety training appropriate for their responsibilities
- b. In particular all managers, supervisors and operational personnel should be trained and be competent to perform their duties.

comment 520 comment by: *UK CAA*

**Page No:**  
28

**Paragraph No:** AMC 1 and AMC 2 to OR.GEN.200(a)(4) para 1 a&b

Comment: Guidance material needs to be developed to detail what should be included in Safety Training.

**Justification:** Without further clarity this will lead to inconsistency of the safety training whereas this is an important part of the process.

**Proposed Text (if applicable):** develop guidance material with the following text.

For operational staff the safety training should include:

SMS fundamentals and overview

Human Factors and Organisational Factors  
 Safety philosophy, safety policies and safety standards  
 Safety responsibilities and accountabilities  
 Organisation's SMS functions  
 Lines of communication for safety matters  
 Disciplinary Policy and Safety Culture  
 Safety reporting  
 Unique operational safety hazards  
 Seasonal safety hazards  
 Safety Initiatives ie FDA, LOSA etc  
 Emergency procedures

In addition to the above Operational and Senior Managers should also have safety training on:

Engaging staff in hazard reporting  
 Detailed knowledge of the Safety process including  
 Hazard identification, Safety Risk Analysis and Mitigation and Change Management  
 Active promotion of SMS  
 Performance measurement and establishing acceptable levels of safety  
 Internal communication

### **AMC to OR.GEN.200(a)(5)**

#### Comment

There is no reference to applicable European regulation for incidents reporting systems **Regulation 2003/42/CE (June 2003)**.

The scope of the scheme is not clear as §2. mentions "relevant" incidents/accidents, §3. gives a definition that reads "occasions where routine procedures have failed", and §4. talks about "occurrences".

Does the scheme also cover confidential reporting systems?

The paragraph does not add any value to the already existing reporting European regulation and will add confusion.

### **CLARIFY OR DELETE AMC to OR.GEN.200(a)(5) Management System**

#### ~~OCCURRENCE REPORTING SCHEME~~

~~1. The overall objective of the scheme is to use reported information to improve the level~~

~~of flight safety and not to attribute blame.~~

~~2. The objectives of the scheme are:~~

~~a. to enable an assessment of the safety implications of each relevant incident and~~

~~accident to be made, including previous similar occurrences, so that any necessary~~

~~action can be initiated; and~~

~~b. to ensure that knowledge of relevant incidents and accidents is disseminated, so~~

~~that other persons and organisations may learn from them.~~

~~3. The scheme is an essential part of the overall monitoring function and it is complementary to the normal daytoday~~

~~procedures and 'control' systems and is not~~

~~intended to duplicate or supersede any of them. The scheme is a tool to identify those~~

~~occasions where routine procedures have failed.~~

~~4. Occurrence reports should remain in the database when judged reportable by the~~

~~person submitting the report as the significance of such reports may only become~~

~~obvious at a later date.~~

1., 2. and 3. There are no "should" in these parts of the AMC. Therefore what is their status? The only "should" is in 4. which relates to a database. This AMC should address the requirements for, and use of, an occurrence reporting scheme.

1. When discussing reporting schemes the general consensus is that a just culture is necessary rather than a no blame culture. Also see 2008/0127 (COD) & 2008/0128 (COD)

4. No requirement for a database is included in any other AMC so what are the requirements for a database and what is its intended use? The existing text suggests that entry and retention of occurrence reports is all that is required.

comment by: GE Aviation

The intent of this requirement may be better served by other means; it is too prescriptive as it stands.

The occurrence reporting scheme may not be the best means to assure "safety awareness" by other persons and organizations; a list of occurrences may convey much less than a package which has been analyzed to provide information, rather than raw data.

The intent of requirement 4 is unclear. It implies a database, and further clarification is needed on the database.

It is not clear what events are "reportable" in this context.

By stating that the events must remain in the database, the ability to analyze and resolve improper reporting is lost. The database is likely to become diluted/corrupted by reports outside the intent of the program.

All of the above points need to be understood before this requirement can be evaluated.

comment 2379  comment by: *Klaus HARTMANN*

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland.  
Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren

und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren. Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.  
 Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.  
 Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.  
 Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freiballonführer BPL/LPL(B)' geben.**

Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini – ATO allgemeiner Art möglich.

Für Mini – ATO's BP L/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini –ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini – ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini – ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch senior examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.

Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglich sein.

differences between safety management manual, organisational manual and aerodrome manual (as per ICAO) needs to be clarified for aerodromes à justification for the organisation manual is not clear

comment 1787 comment by: *ACI EUROPE*

An organisational manual containing all management system processes should not be required under a safety regulation. For instance should various financial and accounting processes as well as numerous administrative processes not be required to document to the aviation authorities under this regulation? Only

safety relevant management processes should be included. This should be explicitly stated.

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland.  
Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung

betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 - 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus. Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren. Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.  
 Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.  
 Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.  
 Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freiballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freiballonführer BPL/LPL(B)'**

geben.

Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini – ATO allgemeiner Art möglich.

Für Mini – ATO's BP L/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manualls' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini –ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini – ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini – ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch senior examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.

Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglich sein.

The information might be contained in other manuals (refer to the IR OR.GEN.200 (a) (6) so we don't see a need to have a integrated manual with this requirements as a stand alone, if they are provided in some other manuals

(as stated in GM to OR.GEN.200 (a)(6))

Proposal;

The information may be contained in other manuals, e.g. aerodrome manual, operations manual or training organisation manual.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart GEN - Section 2 - AMC 1 to OR.GEN.200(a)(7) Management System**

p. 29-31

- comment 54 comment by: *George Knight*
- This AMC is attempting to impose inappropriate and disproportionate controls onto small ATOs that are mainly recreational clubs.
- Small recreational ATOs should be exempt.
- comment 267 comment by: *ECA- European Cockpit Association*
- Delete and replace words:
3. Tasks.
- b. The **accountable** manager should **designate a manager whose role is to monitor compliance with Part OR and other applicable Parts, and any additional requirements as established by the organisation, and the adequacy of procedures required to ensure safe operational practices and airworthy aeroplanes are being carried out properly under the supervision of the relevant nominated post holder.** ~~be responsible for ensuring that the Compliance Monitoring Programme is properly implemented, maintained and continuously reviewed and improved.~~
- Justification  
This paragraph defers the responsibility from the Accountable Manager to someone within the Organisation who cannot issue any directive due to the hierarchy; the Safety Manager cannot take responsibility for compliance, he can only monitor compliance and report to the Acc Manager.
- comment 406 comment by: *Civil Aviation Authority of Norway*
- Comment to (6):  
The training and communication requirements in a Management System should not be limited to safety training and communication. Also, quality system training/communication and other applicable management system training and communication requirements must be included.
- comment 407 comment by: *Civil Aviation Authority of Norway*
- Comment to (5);  
The content of the organisation manual does not correspond with the content of the safety management manual required by AMC 2 OR.GEN.200(a)(3)
- comment 409 comment by: *Civil Aviation Authority of Norway*

A compliance monitoring system is not a term that is widely known or accepted by the industry. The previous quality system required by EU-OPS /JAR-OPS was primarily addressing safe operations and airworthy aircraft, and was not focused on customer satisfaction or commercial goals.

The safety focus is now controlled by the safety management system and the safety manager, and to introduce an additional compliance monitoring system based on previous regulations, rather than to enable the implementation of a well-known and widely accepted quality management system, may result in a degraded outcome and poor commitment to the management system as a whole.

comment 410

comment by: *Civil Aviation Authority of Norway*

Comment to (3);

The designation of a manager whose role is to monitor compliance with the applicable Parts, is the typically role of a quality manager. This role is required to have direct access to the AM, and should not be a nominated post holder.

By requiring this role in an organisation, it may lead to the conclusion that safety performance is independent from compliance with regulations, which should not be the case.

Furthermore, why not require the same independency and responsibility on the role of the safety manager, as on the "compliance monitoring" manager?

comment 442

comment by: *FlightSafety International*

#### **Comment**

This section states "the Accountable Manager should designate a manager..."

#### **Proposal**

Change the wording to read "the Accountable Manager should designate a Management Representative..."

#### **Impact to FlightSafety**

The intent is to designate a Management Representative, as the term is used throughout management systems, whether they be safety management, quality management, compliance monitorinr, etc.

comment 443

comment by: *FlightSafety International*

#### **Comment**

Section ii states that the relevant documentation should include "Terminolgy, Corporate core values and governance criteria;"

#### **Proposal**

Delet the words "Corporate core values and governance criteria"

#### **Impact to FlightSafety**

An organizations "corporate core values and governance criteria" are far out of the scope of rules designed to regulate the safe, effective training of pilots. Corporate core values are not something that can be regulated, they are a part of the organizations culture. Governance criteria are controlled by the training organizations and the rules and regulations of the country(s) in which they operate. Inclusion of the requirements to define the corporate core values and governance criteria within this Rule opens the subject for interpretation by personnel who are neither experts in the field nor party to what in many cases

is proprietary information and what might legally be construed as protected personal information.

**AMC (1) to OR. GEN.200 (a) 7.**

As an alternative to a separate Compliance Monitoring System, Operators should have the option to use their existing Quality System to provide the same functionality. This would reduce duplication of effort and reduce paperwork.

comment 864

comment by: NATS

1.a. Unless Compliance implies a level of confirmation of the correctness of the compliance then Compliance with relevant requirements of Part OR and any other particular Parts does not, of itself, imply that the organisation's activities are safe (i.e. it is possible to comply with a requirement in a way that appears to comply but is unsafe). Given that there is a purpose in undertaking Compliance Monitoring to whom is the outcome of compliance monitoring reported and in what form?

1a. Is a distinction drawn between product and process compliance? This AMC reads more as process compliance (i.e. a process has been complied with) rather than a product compliance (i.e. the outcome is fit for purpose). Whilst a process based approach is suitable for scripted activities (e.g. following a detailed checklist that in itself ensures a good outcome) if the process is objective based (e.g. an argument that a particular operation is safe) then process compliance is insufficient and an assessment of the product is required.

2. In monitoring items a. to e. what is the required outcome? What are the procedures trying to do e.g. what is the purpose of monitoring an organisational structure?

2. This seems to have a similar intent to 4. (Scope) e.g. organisational structure appears in both places. It would be less confusing to only have one instance of the scope of the compliance monitoring system.

3. This is not so much "Tasks" rather it is how, managerially, the compliance monitoring system is set up.

4.a. i. and ii. Which Policy and what processes?

comment 943

comment by: INAER

**AMC 1 to OR. GEN.200 a.(7).1.a**  
**"the implementation ..., to ensure safe and efficient activities"**

Suggested:

**"the implementation ..., to ensure safe and effective activities"**

Argument:

Legislation should only specify requirements about safety and effectiveness, but not about efficiency, which should only be a concern when specifying safety requirements.

comment 944

comment by: INAER

**AMC 1 to OR. GEN.200 a.(7).2.**  
**".. and where appropriate, monitor:**  
**a. Organization structure**

- b. Plans and objectives**
- c. Privileges of the organization**
- d. Manuals, logs and records**
- e. Training standards**

Suggested

**".. and where appropriate, monitor:**

- a. Manuals,**
- b. Procedures and SOPs**
- c. Compliance with legal and statutory requirements**
- d. Training standards**

Argument:

The organization structure, privileges and the need for establishing objectives and plans is already in the manuals and procedures. Therefore, it is an unnecessary duplication to specify that the requirements contained in both documents should be audited and monitored, and only promotes confusion about the requirements.

The logs and records are not monitored themselves, but they are periodically audited, as stated in the Compliance Monitoring System.

comment 945

comment by: *INAER*

**AMC 1 to OR. GEN.200 a.(7).4.**

**"A compliance monitoring system should address the following:**

- i. Policy**
- ii. Processes**
- iii. Compliance monitoring programme**

Suggested

**"A compliance monitoring system should address the following:**

- i. Scope of the CMS**
- ii. Procedures that contain the relevant processes accountabilities**
- iii. Compliance monitoring audit and inspections programme**

Argument:

a) The policy should be included in the management system policy, which includes the safety and compliance commitments.

b) The term "process" is internationally defined in EN ISO 9000:2000 (3.4.1), and is clearly something different from a procedure, which is defined in EN ISO 9000:2000 (3.4.5).

A compliance monitoring system should promote a process approach, as done by EN ISO 9001, but in case the documented process should be required, it should be part of the documented procedure.

c) The programme should specify that it refers to the audit and inspections programme.

comment 946

comment by: *INAER*

**AMC 1 to OR. GEN.200 a.(7).4.**

**"The compliance monitoring system should include a feedback system to ensure that corrective actions are both identified and promptly addressed".**

Suggested:

**"The compliance monitoring system should include a feedback system**

**to ensure that non-compliances are promptly treated, and where applicable, corrective actions are both identified and promptly addressed”.**

Argument:

The term “corrective action” is internationally defined in EN ISO 9000:2000 (3.6.5), and is something different from a remedial action, correction or non-compliance treatment, which is defined in EN ISO 9000:2000 (3.4.6).

EASA AMC should take into account these important differences in concepts to deal with non-compliances.

AMC1 to OR.GEN.200(a)(7):3.c

Propose changing 3cii. To read: Not be one of the nominated post holders **(except in the case of small organisations)**; and.....

Reason:

Whilst it is obviously desirable that a small organisation does not need a dedicated manager for compliance monitoring (as proposed in sub para d), there should not be any prohibition on the task being done by one of the nominated post-holders. A small organisation, by definition, will have few resources to call upon when allocating tasks; it is therefore impractical and unnecessary to prohibit suitably qualified and able members of that organisation from carrying out duties just because they also have certain other duties. No doubt the counter argument offered by EASA will concern the lack of independence – however that would equally apply (perhaps more so) to the role of Accountable Manager. The National Authority will have oversight of the Organisation manual and the roles and structure of the organisation, so they can decide whether the allocation of roles and duties is acceptable. There is no need to make this proscription within the 'standard' AMC.

Or, paragraph d could be amended to allow other nominated post holders, as an alternative to the Accountable manager

EG: .....may be exercised by the Accountable Manager or other senior officer of the organisation (including nominated post-holders).

comment by: AIRBUS

The paragraph 3cii indicates that the Manager should not be one of the nominated post holders. This is in contradiction with the proposed paragraph OR.OPS.210.AOC (a)(4) introduced by the NPA 2009-02c:

"(a) The operator shall, in accordance with OR.GEN.210(b) nominate post holders responsible for the management and supervision of the following areas:

- (1) flight operations;
- (2) crew training;
- (3) ground operations; and
- (4) compliance monitoring."

The paragraph should be modified into:

"The manager (of CMS) should:

[...]

ii. not hold another nominated post.(\*)

[...]

(\* Only the posts of the Accountable Manager and the Compliance Monitoring Manager could be combined. In this case, compliance monitoring audits should be conducted by independent personnel. (refer to AMC1 OR.OPS.210.AOC (a)(6))"

comment 2274

comment by: *Oxford Aviation Academy*

There is avoidable duplication with respect to the proposed regulations and AMC concerning the compliance monitoring system an Organisation is required to establish. The compliance monitoring system guidance proposed in AMC 1/2 to OR.GEN.200(a)(7) is intended to be generic and appears to be based on JAR-FCL and therefore only addresses training elements. For training organisations operating FSTDs there is additional compliance monitoring system guidance proposed in GM 1 to OR.ATO.300 that goes far more into depth and methodology than that stated in AMC 1 to OR.GEN.200(a)(7), and is obviously based on the JAR-FSTD quality system requirements. A compliance (quality) monitoring system is GENERIC and will address all aspects of an organisation's operations, whether providing basic training, type training, maintenance training, operating FSTDs, or even maintaining own aircraft. The system will be tailored depending on what activities are relevant, and this is actually stated in AMC 1 to OR.GEN.200(a)(7), 4.(a)(iii). We believe that it is not necessary to propose two sets of CMS AMC/guidance because it may lead to the conclusion that organisations providing training activities and operating FSTDs will need to maintain two independent compliance monitoring systems. As far as we understand, if a company is an FSTD operator only (no training conducted) they will still require an ATO approval. Therefore the proposals for a compliance monitoring system need only be stated once. The proposals in this area would appear immature and need more work so that GM 1 to OR.ATO.300 is deleted but with relevant texts incorporated into AMC 1/2 to OR.GEN.200(a)(7), or a new GM 1 to OR.GEN.200(a)(7) developed.

There is no GM for OR.GEN.200(a)(7) Management System in the same way as there is for OR.ATO.300 General, enforcing the above comments.

comment 2314

comment by: *Danish Powerflying Union*

We suggest EASA to delete following:  
**5.b. Viii "The training syllabus; and"**

We see no need to rewrite the syllabus from the FCL-regulation.

comment 2356

comment by: *Nordic Airways*

The manager referred to in point 3.a. should be named e.g. "Quality Assurance Manager" in the regulation. It is not appropriate not to name managers since references to the manager in this or other Parts will be ambiguous.

As an example, the unnamed "Quality Assurance Manager" is named "Compliance Monitoring Manager" in AMC 1 OR.OPS.210.AOC(a) point 6.

comment 2357

comment by: *Swiss Power Flight Union*

The management system should be minimized for non-commercial and club-based ATO's.  
Reduce for non-commercial and club-based ATO's the requirements 1 to 6. Reduced requirements, more adapted to the needs of small ATO's, should be used.

comment 2360 comment by: *Nordic Airways*

According to point 3.c.ii. the Quality Assurance Manager should **not** be one of the nominated post holders. However according to the proposal in OR.OPS.210.AOC (a)(4) this manager **should** be a nominated post holder.

comment 2408 comment by: *FINNAIR*

It is proposed to delete the sentence "to ensure safe and efficient activities." As efficiency is not the purpose of the safety regulation even if the regulation should take that into consideration when drafting the rules.

comment 2448 comment by: *Nordic Airways*

The list under point 2 should include "Management system".

comment 2459 comment by: *Iberworld Airlines*

OR.GEN.200 (a) (7) include the responsibility for the "adequacy of the procedures" that, according to my experience of more than 10 years of Quality Director, is much more difficult to comply and much more important than "monitor the compliance of the relevant requirements". Significant findings has been found due to non adequate procedures, that could not be detected by the internal "quality systems" due a significant lack of technical competence of personnel responsible for these systems. Is requested to delete the responsibility over the "adequacy of procedures" or to define the technical competence required to persons in charge of the function defined in OR.GEN.200 (a) (7), that needs to be similar to the competence of the postholder responsible of the corresponding procedures.

2379 comment by: *Klaus HARTMANN*

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland. Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 – 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf

Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freieilballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freieilballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspricht den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen Orten etabliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte**

**Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.**

**Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.**

AMC4 OR.GEN.200(a)7

A further sub paragraph should be added:

c. The format and content of the following documents should be varied according to the aircraft type and nature of operations.

Reason:  
The forms are obviously designed with aeroplanes or helicopters in mind, no allowance has been made for other aircraft types. For example, balloons do not require de-icing or the services of a ground handling organisation; they do not require flight plans to be filed (for domestic UK use), etc. Whilst these forms could be used and 'Not Applicable' entered in various places, it would be better to use customised documentation, more applicable to the aircraft type – this would be considered by the National Authority as part of the approval process.

ADD

5. For FSTD operators a training center with two or less FFS is considered small

comment:  
What about if an operator does not provide wet training but only dry (meaning it does not need instructors) hence is only a FSTD operator with no ATO approval

comment 57 comment by: *George Knight*

-2 & 3 – Small recreational ATOs and clubs may not employ any instructors; they are frequently part-time volunteers, especially in the gliding and microlight environments. In some cases a large club may have more than 20 volunteer instructors, however, it will only roster typically up to 4 at any time. The definition should be on Full Time Equivalentents so as to eliminate the inadvertent classification of small ATOs into the large ATO category based on total numbers of instructors rather than the maximum on duty at any time.

comment 71 comment by: *British Gliding Association*

The BGA disagrees with the assumptions made in this part items 2 - 4.

It is clear from previous comments that the requirements for an 'other' organisation are disproportional (and in many cases economically impossible) for what is fundamentally volunteer managed gliding training within an airport federation recognised by an NAA. Clearly any gliding training outside of that established format should be considered seperately.

Proposal. Item 1 should read 'Small training organisations and any Air Sport approved training organisations within an Air Sport Federation recognised by an NAA should have...'

comment 360 comment by: *Egon Schmaus*

AMC to OR.GEN.200(b)

2. For this purpose, approved training organisations that employ 20 or less instructors, or working solely with leisure-time instructors should be regarded as a "small organisation".

Reason:

ATOs like Baden-Württembergischer Luftfahrtverband (BWLTV) are an "Umbrella-ATO" for some 150 aeroclubs with mostly just 2-3 instructors for LAPL or PPL(A) or (S).

All work of management and auditing is done by leisure-time personnel without remuneration.

comment

373

comment by: *Aero-Club of Switzerland*

Question to 4.(c) before commenting: What kind of satellites might the writers of this paragraph have been thinking of?

In our federations and clubs, a figure of "20" has no logic as the instructors are volunteers and members of the club and/or federation, and taking part in the activities during weekends or during holidays.

**Proposal**

Please add: Non-commercial and club-based ATO's are small organisations irrespective of the number of engaged instructors.

comment

527

comment by: *UK CAA*

**Page No:**

36 of 83

**Paragraph No:** AMC to OR.GEN.200(b)

**Comment:** The definition of a 'small organisation' is different for an ATO than for an Operator. They should be the same and based on FTEs. With a recommended instructor/student ratio of 1:6 the ATO could have 120 students at a time, which is not a small organisation.

**Justification:** There does not appear to be any justification for a difference in definition.

**Proposed Text (if applicable):**

2. For this purpose, approved training organisations that employ 20 or less full time equivalents (FTEs) should be regarded as a small organisation.

Change the term "large organization" to "other organization" to be consistent with wording used previously [e.g., in AMC 2 to OR.GEN.200(a)(4)].

**JUSTIFICATION:** Text consistency.

comment 903

comment by: Royal Danish Aeroclub

Small organisations are in the proposal defined by 20 instructors or less.

A number of european volunteer based federations and unions have hundreds of instructors, but the complexity of the organisation and the range of training courses are limited.

The determining factor, when deciding "small" or "other organisation" should be the complexity of the organisation and the range of training courses offered.

comment 998

comment by: Swedish Transport Agency, Civil Aviation Department  
(Transportstyrelsen, Luftfartsavdelningen)

**Comment:**

The definition of "small organisation" should be the same in OPS and FCL. Therefore, the definition in FCL should be related to the number of persons who are employed. This will avoid discussions on who is instructor and who is not.

**Proposal:**

Use the definition in OPS for ATO.

1. Small approved training organisations should have a management system that is appropriate for the size of the organisation and the complexity of the activity.
2. For this purpose, an approved training organisation that employs 20 or less should be regarded as a "small organisation".
3. An approved training organisation that employs more than 20 should be regarded as an "other organisation".
4. In determining complexity, the following factors should be considered among others:
  - a. number of aircraft types used for training;
  - b. range of training courses offered;
  - c. geographical spread of training activities (e.g. the use of satellites); and
  - d. range of training arrangements with other approved training organisations

comment

Proposal:

§2: add "FTE's" after "20".

§3: add "FTE's" after "20";

repalce "other" by "large".

Reason: to be in accordance with the next paragraph relating to OPS.

comment

1090

comment by: EUROPEAN GLIDING UNION

AMC OR.GEN.200 (b) – Size, nature and complexity of the activity

In this AMC a partial definition of a "small" organisation is provided. The wording "employed" is used - again indicating a commercial approach.

In a gliding club, training is given by almost exclusively volunteer instructors. It is highly inappropriate to describe their activities as "employment". In some member states there are significant legal implications by doing so.

There exist some large clubs that employ full time staff mainly in supporting administrative and other roles. This employment covers the whole activity of the club (doing also other tasks than giving instruction) and the activity is carried out without a commercial goal. Those clubs comply with the legal status in a national context.

In a club or federation environment, a figure of "20" has no logic (it is an arbitrary number) as these instructors are volunteers taking part in the club activities in their own recreational time, for example during weekends or during holidays. So a large club can count, for example, 40 instructors with each of them providing differing but small proportions of their available recreational time over the whole year.

The same argument applies to the "FTE" or full time equivalent. This makes no sense in the volunteer environment.

comment 1175 comment by: *Irish Aviation Authority*

1. This AMC is inconsistent with the following one viz **AMC1 OR.GEN.200(b) Management System-OPS** .

For ATO a figure of 20 is used whether the personnel are full-time or not, whereas for OPS, full time equivalent is used. A full time equivalent figure should be used here.

Also the terms "small organisation" and "other organisation" are used here but for OPS it is "small organisation" and "large organisation". Generally in this NPA the former system is used and should be used throughout.

2. There could be a very large ATO with no instructors. A FSTD operator, which now must be an ATO for approval purposes (see **CSFSTD(A) BOOK 1 SUBPART A APPLICABILITY CS-FSTD(A).001 Applicability**

(a) CSFSTD(

A) as amended applies to approved training organisations operating a Flight Simulation Training Devices (FSTD) or in case of BITDs only, manufacturers seeking initial qualification of FSTDs.

and **OR.ATO.350 Application for FSTD qualification**

An application for an FSTD qualification shall be made, in a form and manner established by the competent authority, by the ATO, except for BITDs, for which the applicant shall be the BITD manufacturer.) could have many installations and many staff or personnel but no instructors. Therefore a criterion other than instructor numbers will have to be used for determining size. Suggest FTE as in **Management System-OPS** .

AMC to OR.GEN.200(b)

Para 2. This should presumably refer to 20 or less full time equivalent (FTE) instructors, as per AMC1 OR.GEN.200(b)1. below.

If this is not a drafting oversight and it is proposed to have the different criteria of 20 Full Time Equivalent employees or 20 Instructors to determine whether an organisation is small or not, then I would maintain that this makes a mockery of any pretension to proportionality within the proposals.

 We recommend to correct numbering of AMC to OR.GEN.200(b):  
 AMC **1** to OR.GEN.200(b) Management System **ATO**  
 AMC ~~2~~ **2** to OR.GEN.200(b) Management System **OPS**

comment 1666 comment by: CAA CZ

AMC to OR.GEN.200(b), page 36  
 Management System **ATO**:  
 2. For this purpose, approved training organisations that **employ 20 or less instructors** should be regarded as a "small organisation".  
 3. Approved training organisations **employing more than 20 instructors** should be regarded as an "other organisation".  
 We propose to use the same calculation for "full time equivalent (FTE) as in the following section AMC 1 to OR.GEN.200 (b) Management System - OPS. We have problem with FTO now, because there is not clearly defined "full time". Organization, which has 65 instructors, we have to consider as very small, because it employs full-time only 2 people.

comment 1696 comment by: *Fédération Française Aéronautique*

FFA firmly disagrees with the wrongful definition of "small organisation" given in this AMC. The number of instructors employed is not a meaningful criterion. So, once again, the FFA asks for the definition of "Very small flight training organisation" as defined in our proposal on NPA page 1 above. A "Very small training organisation" is an ATO providing VFR flight training for Basic LPL, LPL and PPL. Nothing more, nothing less.  
 Fundamentally, it is not at all the purpose of an AMC to modify the definition given in the NPA 2008-22a (page 106 table 48). EASA gives once again the feeling that "the devil is in the details".  
 Consequently, FFA asks that rules 2 and 3 of this AMC shall be deleted.

comment 1718 comment by: *Baden-Württembergischer Luftfahrtverband*

AMC to OR.GEN.200(b)  
**Wording in the NPA**  
**Our proposal**  
 ADD:  
 Non profit training facilities like clubs with volunteer instructors for LPL, SPL, BPL or PPL can be considered as small ATO.  
 Multiple non profit training facilities like clubs for LPL, SPL, BPL or PPL may join into a single ATO and be regarded as a small ATO.  
**Issue with current wording**  
 May not appropriately apply to umbrella ATO. The distinction does not apply to non profit ATO with volunteer instructors and no employment contract.  
**Rationale**  
 An Umbrella ATO as implemented in many states of Germany consists of a team managing the ATO and many quite independent subsidiaries in the clubs

handling the actual training. Most of the positions are filled by volunteers. There are no employed instructors, all are volunteers. Courses are limited to LPL, SPL, BPL and PPL For the subsidiaries the umbrella ATO will apply the regulations for small ATO's

comment 1747

comment by: CAE

AMC OR.GEN.200 (b) (2) page 36

The specification to "employ 20 or less instructors" is disadvantageous to organizations using part-time instructors. Please change to terminology including a Full-Time Equivalent (FTE) number of instructors as is the case of Management System-Ops employees in AMC 1 OR.GEN.200 (b).

This will avoid burdensome regulations on small organizations that employ part-time instructors.

comment 2145

comment by: CAA Norway

AMC OR.GEN.200(b)

It should be specified that the 20 instructors should be Full Time Equivalents, as is done in AMC 1 OR.GEN.200(b) – Management System- OPS.

It could also be considered if it is possible to combine these two AMCs into one.

comment 2254

comment by: CAA Finland

Amend. The number of instructors is not clear as in several ATOs there are many part time instructors.

**(e) Two part time instructors (less than 20 working hours per week for the ATO) are counted as 1 instructor.**

comment 2273

comment by: Svenska Ballongfederationen

AMC to OR.GEN.200(b) Management System ATO

2. & 3.

To limit the number of instructors in a "small organisation" to 20 is from a Swedish perspective not good and might even be devastating for the future of training in Sweden.

Almost all Swedish balloonists are organized in Svenska Ballongfederationen, SBF for short. SBF is the national non-profit balloon organization (Swedish version of BBAC). SBF has through its flight school and training organization performed the main part of training for balloon certificates for thirty-five years. Today SBF handles training all across Sweden with less than twenty instructors, four of which are also examiners. The number of instructors will from year to year typically vary between seventeen and twenty-six. This is what is needed to handle the amount of students and pilots in need of for example proficiency checks in Sweden.

There is a big difference between the amount of work needed to satisfy the demands for management systems in an "other" and a "small" organisation. Being a non-profit flight school it would be devastating for SBF to be classified as "other organisation" since all work done by instructors and flight school staff is done on a voluntary basis without personal gain. The number of instructors however will need to be somewhere around twenty as will be shown in the following paragraphs. The added demand on PC:s every six years for LPL(B) and BPL certificate holders suggested by NPA 2008-17 might also demand that we may need to increase the number of instructors.

In Sweden most instructors have other professions and do flight training in their spare time free of charge. The flight school is as mentioned before also a non profit organization. A student therefore can't expect to do flight training as soon as he/she has the time but must also be able to find an instructor that has the time. The Swedish instructors also have to cover students in many different locations. Travelling from the south to the north of Sweden takes about twenty-four hours by train. This is also a limiting factor which means that students must use every chance they get when there is an instructor in the vicinity. We also have the weather working against us and all windows to fly, train and test are needed. A student pilot for example needs to be able to take the chance to fly when he/she gets it and must then be able to find an instructor. All of these needs and limiting factors mean that we must have quite a lot of instructors (typically between seventeen and twenty-six) to handle all training in Sweden, however we are still a small organisation with no full-time instructors. The same arguments can be applied to students/pilots in need of proficiency checks, extension of privileges, and revalidation of expired certificates.

comment 70 comment by: *British Gliding Association*

It is clear from previous comments that the requirements for an 'other' organisation are disproportional (and in many cases economically impossible) for what is fundamentally volunteer managed gliding training within an airport federation recognised by an NAA. Clearly any gliding training outside of that established format should be considered separately.

Proposal. Item 1 should read 'An organisation employing 20 or less FTE or any Air Sport approved training organisations within an Air Sport Federation recognised by an NAA should be regarded as a small organisation.'

comment 83 comment by: *David COURT*

It is good to the that EASA have used FTEs when determining the size of an organisation. Many Training Organisations have more than 20 Instructors but a lot are part time volunteers who may only instruct for a few flights each week.

comment 115 comment by: *Jan Ahlquist, QM, Blue Chip Jet HB*

This is valid for an Operator where the limit is 20 or less FTE to be considered a "small organisation" The operator management system could have both Part-M, Part-145, OR-ATO +++ thereby it is very small organisations that is defined as "other organisations" that will require this setup.

All according to the object that there only should be one managent system even if the Company/operator has several different approvals.

Our Company is exceeding this today with 3 business jet aircraft, total fleet utilisation of less than 2000 fh/year. OPS, PART-M and Part-145 organisations. To be required to establish the management system as "other organisation" will give an unmotivated administrative and financial burden for the Company. To be classified as "small organisation" would be both more efficient and relevant, without degrading the safety objects.

Suggest that this is taken into consideration and give possibility for making the organisation, efficient and relevant to the actual size of the total organisation and use similar conciderations as in AMC OR.GEN.200(b) for ATO.

Maybe based on a maximum number of Nominated Post Holder(NPH) + Accountaber Manager, Safety manager and Quality Manager for a multiapproval organisation.

comment by: European Business Aviation Association (EBAA)

**AMC1 OR. GEN.200 (b)**

This distinction between small and large organisations seems a little simplistic in determining the complexity of an operation. Rather, the nature and mixture of flight operations should be used as a determinant of the size of the business rather than just employee head count. Indeed, in GA/Corporate, many FTEs work less than 35hr per week. Accordingly rather than there being a specific boundary between small and large operators, it should be a continuum that relates to the nature, size and complexity of the operation. Whilst this lack of a clear delineation may present certain difficulties for regulators, this can be overcome by making the delineation more performance based and less prescriptive. At the very least, the validity of some of the suggested metrics should be reviewed.

comment

comment by: NATS

1. OR.GEN.200(b) relates to the size, nature and complexity of the activities (as well as the hazards and associated risks inherent in these activities) not the size of the organisation which is the subject matter of this AMC. The AMC does not consider hazards and associated risks.

2. The convention has been to use "other organisation" rather than "large organisation" in other AMC

comment

1162

comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**COMMENTS**

This definition and threshold seem empiric and not realistic regarding the operational and economical activity.

**PROPOSALS**

**1/** Upscale the threshold to 50 FTE.

**2.a/** FTE included in this definition shall be the ones directly involved in the

activity of the organization for the purpose of the scope of the agreement considered.

For instance, let's imagine an operator having either an AOC agreement, an ATO agreement and a part-145 agreement : the threshold shall be calculated 3 times, according to the staff specifically involved in each of those 3 distinctive activities.

(Eg: flights instructors for ATOs, people directly involved in air operations for AOC's holders with an ATO, etc... shall be considered separately and only for the purpose of the activity they carry out.)

*This is a consistency and competitive concern : if not so, this operator would be penalized as compared to another using subsidiaries to perform the same tasks, with the same level of safety.*

**2.b/** Exclude the flight crew from the calculation : risks are not proportional to the number of flight crew, but to the volume and the nature of the activity.

This is also a consistency and competitive concern : let's imagine 2 operators performing exactly the same activity, operator A with 15 flight crews and operator B with 30 flight crews.

*Risks are obviously at least the same for operator A & B (probably less for operator B, which has a higher level of staff), and operator B would be penalized of its investment in human capital, through a higher level of requirements. This would be a non-sense, with no positive safety impact.*

**3/** Define in the AMC or in a relevant GM, guidelines to determinate those considered FTEs

Guidelines and methodology shall be given to both organizations and Competent authorities to determine the considered FTEs.

A working group, const of NAAs and Professionals representatives may assist EASA in conducting this work.

## **JUSTIFICATION**

### **1/**

#### **Consistency with the European global legal framework**

In order to warranty consistency with the global European regulation framework, a 'large enterprise' shall be defined in accordance with Commission Recommendation 2003/361/EC of 6 May 2003, that is to say nor a 'small enterprise' neither a 'microenterprise', ie:

- More than 50 persons / FTE, both for § (a) and (b)

*"Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises [Official Journal L 124 of 20.05.2003] - **Micro, small and medium-sized enterprises** :*

*Micro, small and medium-sized enterprises are defined according to their staff headcount and turnover or annual balance-sheet total.*

*A medium-sized enterprise is defined as an enterprise which employs fewer than 250 persons and whose annual turnover does not exceed EUR 50 million or whose annual balance-sheet total does not exceed EUR 43 million.*

*A small enterprise is defined as an enterprise which employs fewer than 50 persons and whose annual turnover and/or annual balance sheet total does not exceed EUR 10 million.*

*A microenterprise is defined as an enterprise which employs fewer than 10 persons and whose annual turnover and/or annual balance sheet total does not exceed EUR 2 million."*

### **2.a/**

comment by: ERA

ERA Members would like to draw to the attention of EASA the Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises [Official Journal L 124 of 20.05.2003].

Micro, small and medium-sized enterprises:

Micro, small and medium-sized enterprises are defined according to their staff headcount and turnover or annual balance-sheet total.

A medium-sized enterprise is defined as an enterprise which employs fewer than 250 persons and whose annual turnover does not exceed EUR 50 million or whose annual balance-sheet total does not exceed EUR 43 million.

A small enterprise is defined as an enterprise which employs fewer than 50 persons and whose annual turnover and/or annual balance sheet total does not exceed EUR 10 million.

A micro enterprise is defined as an enterprise which employs fewer than 10 persons and whose annual turnover and/or annual balance sheet total does not exceed EUR 2 million.

ERA Members would request that in order to warrant consistency with the global European regulation framework, there is a need for 'large enterprise/organisation' to be defined in accordance with this recommendation, that is to say neither a 'small enterprise' nor a 'micro enterprise'. A suggestion would be *more than 50 persons / FTE, both for § (a) and (b)*.

*Note:* The FTE [full time equivalent] included in this definition should be the ones directly related to the activity of the organization [e.g.: flights instructors for ATOs, people directly involved in air operations for AOC's holder with an ATO, etc...].

comment

2334

comment by: Europe Air Sports PM

AMC OR.GEN.200 (b) – Size, nature and complexity of the activity

In this AMC a partial definition of a "small" organisation is provided. Secondly, the word "employed" is used, which indicates an assumption of commercial interests.

In air sports clubs training is provided frequently (or in the case of gliding almost exclusively) by volunteer instructors. It is highly inappropriate to describe their activities as "employment", which indicates remuneration and therefore a commercial relationship. In some member states there are significant legal implications by using the term "employment".

In some of the larger air sport clubs full-time staff are employed or remuneration mainly in supporting administrative and other roles. This employment covers the whole activity of the club (doing also other tasks than giving instruction and the activity is carried out without a commercial motivation on the part of the club). Those clubs comply with the legal status in a national context.

In an air sports club or federation environment, a figure of "20" has no logic (it is an arbitrary number) as these instructors are volunteers taking part in the club activities in their own recreational time, for example during weekends or during holidays. So a large club can count, for example, 40 instructors with

each of them providing differing but small proportions of their available recreational time over the whole year.

The same argument applies to the "FTE" or full time equivalent. This makes no sense in the volunteer environment.

Proposal:

EASA to reconsider the whole question of terminology in respect of 'employment' and the relationship of volunteers to the club's activities, and whether those relationships lead to the same conclusions are for commercially motivated training organisations. EAS is willing to work with EASA to find an acceptable solution.

comment 2379

comment by: Klaus HARTMANN

Folgende Verhältnisse im Ausbildungsbereich von Freiballonführern in Deutschland und, höchstwahrscheinlich auch in ähnlicher Weise in anderen Ländern, sind bei den Bestimmungen für ATO's im Luftfahrzeugbereich Freiballon (BPL / LPL(B)) zu berücksichtigen/bedenken.

In Deutschland werden jedes Jahr ca. 20 Piloten ausgebildet. Die Anwärter wohnen in der Regel gleichmäßig verteilt über Deutschland.

Dabei sind folgende Besonderheiten zu berücksichtigen:

1. Ausbildungsfahrten finden grundsätzlich nur außerhalb der Zeiten zu denen Thermik herrscht statt. (Z.B. im Sommer zwischen 05:30 – 08:00 loc und 19:30 – 21:30 loc)
2. Ob eine Ausbildungsfahrt durchgeführt werden kann entscheidet sich auf Grund der meteorologischen Bedingungen in Verbindung mit der hohen Sensibilität des Ballons für Wettererscheinungen oft erst kurz vor der geplanten Startzeit am Startplatz.
3. Eine auf kurze Zeitspanne ausgelegte kompakte praktische Ausbildung, z.B. in 2-3 Wochen ist mit Ballonen nicht möglich, da die meteorologischen Verhältnisse in unseren Breiten dies nicht zulassen und daher auch keine Ausbildungseinrichtungen existieren können, die ausschließlich Ausbildung betreiben. Dadurch verteilt sich die Ausbildung zeitlich auf 1 bis zu 2 Jahren und fast nie unter 6 Monate.

Diese 3 genannten Besonderheiten in der Ausbildung zu Freiballonführern führen zu folgender Konsequenz:

Pilotenanwärter müssen für jede Ausbildungsfahrt zum ausgewählten Startplatz anreisen. Dies kann aus meteorologischen Gründen öfter umsonst sein (kein Start). Die Zeiten zum Verlassen des Hauses im Sommer zur Anreise zum Startplatz liegen zum Zwecke der Fahrtvorbereitung der Ausbildungsfahrt mit dem Lehrer mindestens ca. 1,5 h + der Reisezeit vor dem geplanten Start. Nach der Landung im Sommer wird der Ballon verpackt, zur Betankung der Flaschen gefahren, eine Nachbesprechung durchgeführt entsprechend je nach Fahrtstrecke des Ballons ca. 2 – 2,5 h . Die Heimreise endet dann nach Mitternacht.

Daraus folgt, dass für die praktische Ausbildung von den Pilotenanwärtern in der Regel nur Wohnortnahe Ausbildungseinrichtungen ausgewählt werden. Daher sind die Fälle selten, dass mehrere Pilotenanwärter zur gleichen Zeit in einer Ausbildungseinrichtung ausgebildet werden.

Die theoretische Ausbildung findet dagegen in kompakter zeitlicher Form an wenigen Orten in Gruppen in Ausbildungseinrichtungen statt, die sich auf Theorieausbildung ausgerichtet haben. Für die Lehrer der praktischen Ausbildung ist es nicht effektiv einen einzelnen Pilotenanwärter in allen Fächern theoretisch auszubilden.

Die mehr als 200 Lehrer in Deutschland (für ca. 20 Schüler im Jahr) bilden in der überwiegenden Mehrzahl ehrenamtlich in Vereinen oder als einzelne Ausbilder in Ein-Personen Ausbildungseinrichtungen aus.

Aus den genannten Gründen gibt es keine Ausbildungseinrichtungen für die eine gewerbliche Schule ein Haupterwerb darstellen könnte.

Eine Einschränkung der bisherigen Möglichkeiten auch in sehr kleinen bzw. Ein-Personen Ausbildungseinrichtungen ausgebildet zu werden würde die Anzahl neuer Piloten weiter reduzieren.

Einschränkungen sind auch zu erwarten, wenn der bürokratische Aufwand für die oft ehrenamtlich tätigen Lehrer unverhältnismäßig stark ansteigt um Ausbildung betreiben zu können.

Weniger Schüler (und mehr Erhaltungsaufwand für die Lehrberechtigung durch zukünftiges FCL) führt automatisch zu weniger Lehrberechtigten.

Folge : Weniger Lehrberechtigte bedeutet weniger Prüfer bei gleichzeitig ansteigender erforderlicher Prüferzahl durch zukünftiges FCL für proficiency-checks.

Folge : Weniger Prüfer bedeutet eine größere Anzahl von Prüfungen für die verbliebenen Prüfer.

Folge : Weitere Verringerung der Prüferzahl durch Aufgabe der Prüfertätigkeit wegen Überlastung.

**Um die Sicherheits- und Qualitätsanforderungen an ATO's für die Ausbildung von Freieilballonführern BPL und LPL(B) sicherzustellen, die Ausbildungstätigkeit guter Lehrberber echtigt aber nicht erheblich zu belasten oder unmöglich zu machen wird folgender Vorschlag gemacht:**

**Es sollte eine AMC für 'Mini - ATO's für Freieilballonführer BPL/LPL(B)' geben.**

**Falls dies nicht möglich ist wäre auch eine Einschränkung der Anzahl der in einem Jahr maximal auszubildenden Pilotenanwärtern für eine Mini - ATO allgemeiner Art möglich.**

**Für Mini - ATO's BPL/LPL(B) sollte es einen HT geben (auch in Ein-Personen-ATO's) der nach den Vorgaben eines 'Organisation Manuals' arbeitet, dessen Inhalte als GM zu einer OR. ATO für Mini - ATO's festgelegt sind. Darin können alle Aufgaben die in dieser Mini - ATO zu erfüllen sind (reporting, safety, operations, ...) zusammengefasst sein. Mini - ATO's die gerade aktiv ausbilden sollten jederzeit von einer externen Stelle überprüft werden können. Diese Überprüfung könnte durch Mitglieder der Luftfahrtbehörden für die theoretische Ausbildung und reporting erfolgen und z.B. durch Senior Examiners in der praktischen Ausbildung. Diese Überprüfung entspräche den Anforderungen der Sicherheits- und Qualitätsüberprüfungen von small organisations.**

**Im Ballonbereich haben sich wegen der nicht vorhandenen Flugplatzpflicht viele kleine Ballongruppen an vielen verschiedenen**

Orten et abliert. Diese sind oft nicht als Verein organisiert. Auch in diesen Gruppen in denen überwiegend Sportfahrten / Fahrten im Hobbybereich durchgeführt werden finden sich hochqualifizierte Ausbilder die gelegentlich Piloten ausbilden. Daher sollte die Beschränkung der Ausbildung für Mini – ATO's in einer legal entity entfallen, sowie die Bankauskünfte zur finanziellen Ausstattung dieser ATO's.

Die Ausbildung der Pilotenanwärter in zwei verschiedenen ATO's jeweils für die Theorieausbildung und die Praxisausbildung soll möglichst sein.

comment by: *George Knight*

For small ATOs, especially recreational clubs, the main activity to be contracted out will be aircraft maintenance. A small ATO run by volunteers is unqualified to undertake the compliance monitoring proposed against a possibly larger, commercial, aircraft maintenance organisation.

Small ATOs should be exempt.

comment

237

comment by: *ECA- European Cockpit Association*

ECA requests clarification about this article. Is there a transfer of responsibility to the contractor? Or is this only an administrative procedure? What are the changes compared to the present situation? In which cases this article applies, only to the ones in the AMC/GM or are there any other cases the contractor may like to subcontract?

Besides, the title is not clear: Compliance monitoring responsibility by contracting. Change "by" with "when".

comment

446

comment by: *FlightSafety International***Comment**

Section 1.b and 1.c refer to "safety related service" and "safety related activities"

**Proposal**

The Rule and AMC's need to be reviewed and rewritten to consolidate safety-related, quality-related, and management-related activities into a single, comprehensive set of requirements.

**Impact to FlightSafety**

There is currently much duplication of requirements between the various sections of the Rule and AMC's. It is confusing and sometimes contradictory. Determination of a method of compliance has consumed and will continue to consume a tremendous amount of time and resources. A much simpler set of requirements and AMC is necessary in order to prevent duplication of effort and wasted resources.

comment

990

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)***Comment:**

We support the general idea of the requirement but there are some ambiguities and loopholes in the text that need to be addressed, especially in paragraph e) of the AMC. There might be a risk that the requirement in conjunction with EASA's AMC opens up for misuse of contracting out services to organisations that does not have the necessary approvals. Therefore it must be built into the text/wording a limitation in order to hinder an indirect expansion of the activities.

**Proposal:**

Build into the text/wording a limitation to hinder an indirect expansion of the activities. Basically this means that a contracted organisation may not perform an activity that requires an approval even if the contracting party has an approval.

comment

1324

comment by: *Ryanair***AMC to OR.GEN.205 – Contracting and Purchasing****Comment**

Not all activities listed are the responsibility of the Compliance Monitoring System

**Proposal**

Replace "compliance monitoring" with "Organisation". Organisation responsibility by contracting.

- comment 1528 comment by: *BMVBS (MoT Germany)*
- Due to the necessary rewriting of the management system (see commentary to OR.GEN.200) the Paragraphs 1. c. and e. are affected as well. They shall be redrafted. Moreover, we do not consider the delegation of compliance monitoring to the contracted organisation to be acceptable. For example, if an activity needs a special approval or authorisation (by the authority) it is not possible to perform such an activity by a not approved contracted organisation under their own supervision. In this case the organisation has to show that these activities will be performed under direct supervision of this approved organisation.
- Recommended amendment of the text:
1. Contracted activities.
- a. An organisation may decide to contract certain activities to external organisations.
- b. A written agreement should exist between the organisation and the contracted organisation clearly defining the safety related services and quality to be provided.
- c. ~~The contracted safety related activities relevant to the agreement should be included in the organisation's Compliance Monitoring Programme. (complete redrafting necessary)~~
- d. The organisation should ensure that the contracted organisation has the necessary authorisation or approval when required, and commands the resources and competence to undertake the task.
- e. ~~If the organisation requires the contracted organisation to conduct activity which exceeds the contracted organisation's authorisation or approval, the organisation is responsible for ensuring that the contracted organisation's compliance monitoring takes account of such additional requirements. (complete redrafting necessary)~~
- comment 1651 comment by: *British Airways Safety & Security*
- Use of the word quality in section 1b does not describe what is required. The wording should be changed from **the safety related services and quality to be provided** to **the services required and their performance measures**.
- comment 1698 comment by: *Fédération Française Aéronautique*
- Considering this rule not adapted and completely unrealistic for "Very small" (see our proposed definition in the FFA comment on NPA page 1 above), and "Small organisations", FFA requests to delete this AMC or to keep it only for "Other/Large" organisations.
- comment 1952 comment by: *IACA International Air Carrier Association*
- IACA does not understand the purpose of such GM, which may create confusion giving the impression that maintenance can no longer be outsourced.

comment 238 comment by: *ECA- European Cockpit Association*

ECA requests clarification about this article. Is there a transfer of responsibility to the contractor? Or is this only an administrative procedure? What are the changes compared to the present situation? In which cases this article applies, only to the ones in the AMC/GM or are there any other cases the contractor may like to subcontract?

comment 663 comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*

Comments:

GM OR.GEN.205 2. relates to the outsourcing of duties to agents acting on behalf of an operator and states " The ultimate responsibility for the product or service provided by external organizations should always remains (sic) with the operator." This reflects Appendix 2 to OPS 1.175 (2) (ii) which states "An operator contracting other organisations to provide certain services retains responsibility for the maintenance of proper standards. In such circumstances, a nominated post holder must be given the task of ensuring that any contractor employed meets the required standards." It is suggested this text places an unrealistic burden on an operator.

Experience in Switzerland has shown that whilst the above requirement is theoretically sound, in practice it does not work. Numerous instances have been experienced where handling agents have been found to be employing staff who, for example, have not received the requisite dangerous goods training, despite their being audited by the many operators they handle. It is suggested the main weaknesses with the requirement are as follows:

1 An operator audit is only a "snapshot" in time and whilst a satisfactory situation may have been noted during the audit the operator has little control over what happens in the months (typically 12) before the next audit;

2 Increasingly, an agent who has been delegated a task by an operator may in turn delegate this to another company which in theory (according to the text of GM OR.GEN.205.) is still subject to the oversight of the operator. It is suggested this is unrealistic and more needs to be done to ensure that agents acting on behalf of an operator have a responsibility themselves to comply with the applicable requirements.

Proposal:

Delete GM OR.GEN.205 2. and it is suggested the IRs be reviewed to require a) greater accountability of agents acting on behalf of operators, and b) increased oversight by states of such entities.

comment 753 comment by: *CAA-NL*

1. Typographical error; there are two entries for "d."

comment 978 comment by: Luftfahrt-Bundesamt  
Point 1. e.: It is not sufficient to state, that "the organisation is responsible for ensuring, that the contracted organisation's compliance monitoring takes account". If an activity needs a special approval or authorisation (by the Authority) it is not possible to perform such an activity by a not approved contracted organisation under their supervision. In this case the organisation has to show that these activities will be performed under direct supervision of this approved organisation.

comment 1953 comment by: IACA International Air Carrier Association  
"c. Maintenance" has been erroneously omitted.

 Amend. See my comment 2158.  
 for **only** LPL, BPL, SPL and PPL

comment 2389 comment by: *Europe Air Sports PM*  
 The requirements listed here for ATOs for PPL, SPL, LPL etc are far too prescriptive, and for many small clubs would be totally excessive. For example, there are gliding clubs that operate from sites where it is not possible to have such facilities (may be due to local planning restrictions). Also, for ballooning, which operates from fields, there are no such fixed-based facilities at all.  
 The requirements listed may be appropriate for fixed wing larger powered aircraft ATOs - often those structured as commercial training schools - but in the light of the FCL proposals to allow non-CPL instructors to conduct training of aeroplane pilots there will be an increase in training (post 2012) by volunteer PPL(A) instructors from clubs rather than 'professional' school facilities.  
 Proposal:  
 EASA to review the requirements for facilities for ATOs, in particular for gliding and ballooning operations as well as the volunteer-based, non-commercial, aeroplane ATOs.

comment 2404 comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*  
 EPFU point out that, even this AMC is not adapted and realistic to Small non commercial, non profit training organisations.  
 Item 1 and 2 of this AMC must be deleted for the above training organisations.

Paragraph No: AMC to OR.GEN.220 (b) 3

**Comment:** The reference to terminals being required to contain programme safeguards for security may not be appropriate for all IT systems in use by Member States.

**Justification:** Security is not necessarily controlled by terminal. User group policy may determine user network access.

**Proposed Text (if applicable):** Replace last sentence 'Each terminal is required to contain programme safeguards against the ability of unauthorised personnel to alter the database' with '**An appropriate security measure is required to restrict access to the database to authorised personnel only**'.

comment 992

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

These technical requirements for record-keeping by organisations are different to the corresponding requirements for record-keeping by authorities. Some technical or security items are not mentioned in Part-AR, others are not mentioned in Part-OR. This should be harmonised as far as possible.

**Proposal:**

The technical requirements for record-keeping in Part-AR and Part-OR should be harmonised.

comment 1530

comment by: *BMVBS (MoT Germany)*

The wording of Paragraph 3. is unnecessary complicated and should reflect modern computer technology in a more appropriate manner.

Recommended amendment of the text:

3. Computer systems should have at least one backup system which should be updated within 24 hours of any new entry. ~~Each terminal is required to contain programme~~ The system has to incorporate safeguards to prevent against the ability of unauthorised personnel to from altering the database.

comment 2398

comment by: *Europe Air Sports PM*

The requirements in para.3 are overly prescriptive and impractical to implement in a club-based volunteer environment. The 24 hour timescale for updating club records is totally unrealistic in such an environment.

The requirements appear to have been drafted without any knowledge or reference to the environment within which air sports and recreational flying clubs operate.

There is no safety case offered in the NPA for such an onerous requirement.

Proposal:

Delete or at least significantly amend this requirement.

comment 993

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Comment:**

Point 1. We support the general idea of the paragraph but the text need to be more precise as regards authorisation by the competent authority to a person. Is it an authority person or is it generic?

Point 3. It is questionable if this paragraph should be placed in an AMC related to Part-OR because the rule is of a general and mandatory nature.

A pilot in command must always be able to present the documents that must be onboard an aircraft. The rule is more linked to "the right to inspect an aircraft", or ramp inspection, and a pilot in command's fundamental obligation in relation to flight operations than it is to record-keeping. If a pilot in command has performed a flight without the necessary documentation

onboard this in itself may have its reasons, and might even be approved by the competent authority, but as a main rule all necessary documents must be on board an aircraft prior to commencing flight. Otherwise the pilot in command might not be certain that a flight can be performed in accordance with applicable regulations.

The requirement to carry on board certain documentation is also expressed in appendix IV of Regulation (EC) No 216/2008. The text might be in conflict with the Basic Regulation.

**Proposal:**

Point (1). Clarify the meaning as regards competent authorities' authorisation to persons.

Point (3). Delete the paragraph (3) and see to it that the obligation for the pilot in command is expressed in IR-OPS. Furthermore, the text must show that it is mandatory for the pilot in command to show the necessary documents.

comment

2146

comment by: CAA Norway

AMC OR.GEN.220(d)

This paragraph is limited to OPS. We would like to see it made general, as in particular 1 and 2 are very important for the competent authority to maintain oversight.

If it remains an OPS-paragraph, it should accordingly be moved to OR.OPS to be in line with the structure of part OR as described by EASA.

comment by: Royal Swedish Aeroclub

This whole part is clearly written for commercial flight schools. It is simply not suitable for smaller flight school (Altos) as those run by smaller aero clubs in Sweden. The whole part should be rewritten or there should be an amendment

or attachment making it suitable for those schools (Altos) giving courses for PPL or/and lower.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart ATO - Section 1 - AMC to OR.ATO.010(b) Legal entity and financial resources**

p. 39-40

comment 59

comment by: *George Knight*

-(1) The requirements proposed in this section may appropriate for commercial ATOs providing training for professional licences, and which are solely training organisations, but are excessive and disproportionate for small flying and gliding clubs which wish to train students for LPL, PPL, SPL and BPL using predominantly unpaid volunteer instructors. It should be remembered that for many such organisation, particularly gliding clubs, the main activity is the provision of recreational flying and other facilities for their membership and that training is an associated activity, using an existing fleet of aircraft, and not their main purpose.

For small ATOs training only for LPL, PPL, SPL and BPL the requirements should be simplified to:

- That which is essential and relevant to their role, and
- Be less specific about the data requested to eliminate the need to notify the authority when trivial changes are to be made.

Many of these organisations have been in existence for many decades providing excellent training to high standards.

comment 60

comment by: *George Knight*

-(2)

-(a) For small ATOs the data required is too detailed and will result in a need to notify the authority of trivial changes on a frequent basis.

- The numbers and types of aircraft need only be generic, i.e. 3 two-seater gliders, 2 two-seater SEPs, or two TMGs etc.
- Planned numbers of students by month and course – small ATOs do not run scheduled courses – apart from theory – they operate a booking system or a list system and react to demand and weather.

-(b) The financial details requested are not appropriate for small recreational ATOs – they are not commercial profit-making organisations and just don't work that way. In any case, particularly gliding clubs, the major part of their financial outlay is to provide facilities to fee-paying members, and the income from the same members subscriptions and flying fees. The clubs will continue to exist regardless as to the amount of training that they do. This requirement should be simplified to submission of the previous year's accounts for small non-commercial ATOs.

-( c) This section should not apply to small ATOs teaching only for LPL, PPL, SPL and BPL.

comment 61

comment by: *George Knight*

-(3) This section should not apply to small ATOs teaching only for LPL, PPL, SPL and BPL.

comment 73 comment by: *British Gliding Association*

This requirement will only be possible for an airport such as gliding if the Approved Training Organisation is a centrally resourced Air Sport Federation with flight training delivered by clubs. Small clubs would find this disproportional requirement impossible to deliver.

comment 145 comment by: *Aero-Club of Switzerland*

Are para. 2., subpara. b. and c. really meaningful?

Astonishingly, the text in para. 3, subpara. a, uses now in its last sentence the very clear wording of "Any such submission is to be accompanied..."

Why the text is strict with regards to financial matters, why not with regards to aviation safety matters?

According to us, to obtain financial and technical/operational safety need "have to" and/or "must".

Justification: In writing of what you really want you will get what you really want.

We think, it is not the job of bankers to deliver information about the financial state of an ATO, it is the job of the auditors exclusively.

**For non-commercial and club-based ATO's:**

The AMC to OR.ATO.010(b) is too complicated for non-commercial and club-based ATO's. See also our comments on page 9 of 83. The requirements in regard to the legal and financial situation of an ATO are in our club environment simply not possible.

Proposal: Please add the remark: AMC to OR.ATO.010(b) is not mandatory for non-commercial and club-based ATO's.

Justification: See our comments on page 9 of 83. Gliding clubs in Switzerland are not legal entities. But over 90% of all gliding schools are managed by clubs and operate as "Registered Facilities".

comment 362 comment by: *Egon Schmaus*

AMC to OR.ATO.010(b)

2. b

b. Financial Details

- capital expenditure necessary to provide the planned facilities;
- costs associated with running each of the courses for which approval is sought;

- income forecasts;

- a forecast financial operating statement for the business for which approval is sought; and

- of any other financial trading arrangement on which the viability of the approved training organisation may be dependent.

c. The plan submitted in support of an application for initial approval is to be accompanied by a Financial Statement from the applicant's bankers or auditors, which certifies that the applicant has, or has recourse to, sufficient financial resources to meet the applicant's proposals as described in the plan

to conduct PartFCL courses.

proposed text:

d. For non-profit ATOs working solely with non-commercial personnel, this Financial Statement may be replaced by an initial declaration on number, type and value of owned aircraft.

Reason:

Both BWLV and most aeroclubs do not state instruction activities separately all detailed in their annual tax declaration. Students normally pay costs same as licensed pilots.

comment 447

comment by: *FlightSafety International*

**Comment**

These sections all deal with financial information and financial monitoring.

**Proposal**

Remove all requirements regarding financial review or reporting.

**Impact to FlightSafety**

Financial information is proprietary to the organization and in no way should be used as the basis for determination of acceptability as an ATO. Who determines what is acceptable, and what criteria are to be used? Are those determining the criteria and conducting the ongoing financial monitoring actually qualified ATO financial experts?

2.c. I don't quite understand what a "financial statement" has to do with flying training. In a flying club (non-profit) the cost is divided over all the members/pilots. Those who take flying lessons assume the cost of their flying lessons. It will give a flying club extra costs to ask their bank (who will charge at least 200 or more euro's) for a piece of paper with a null statement on a non-profit organisation. (if we see the quality of banks and financial rating companies, I can then only advise to stop right away all flying!!).  
2.b. Why this? Too complicated and too much paperwork that has nothing to do with flying. If flying clubs are not able to assume the financial cost of training, no one else except members will pay, so no plane will go in the air. Please scrap.

comment

793

comment by: *AEA***Comment:**

Within some (big) organisations, the ATO is part of a larger organization. A financial statement signed by the banker or auditor is normally not given for the ATO separately, but for the whole organisation as such. As these ATO's normally only train their own flight crew (who don't have to pay for the training) a separate financial statement is superfluous and unnecessary expensive.

**Proposal:**

Add provisions for ATO linked with, or part of, an airline

AMC OR.ATO.010 (b) Legal & financial resources

All requirements in regard to the financial situation of an ATO are clearly written with commercial organisations in mind. In a club or federation

environment these requirements are simply not possible, nor appropriate.

Proposal.

Delete these items where related to not-for-profit organisations.  
Please see our comment under OR.ATO.010.

comment 1186 comment by: *Danish Balloon Organisation*

**AMC to OR.ATO.010(b)**

We suggest that the AMC be amended as follows:

**AMC to OR.ATO.010(b) Legal entity and financial resources**  
FINANCIAL RESOURCES – APPROVED TRAINING ORGANISATION

New item added as follows:

**4. In the case of organisations run by national aeroclub associations for members only the requirements listed in (1-3) above are not applicable.**

Justification: Items mentioned under (1-3) in AMC 2 to OR ATO.010(b). should not be required for national aeroclub associations.

comment 1188 comment by: *Royal Swedish Aeroclub*

The financial requirements are unsuitable for small ATOs as those run by flying clubs. In Sweden a large number of these flying schools (ATOs) are directly affiliated to or owned by the local aero clubs. Some of those may be quite small. This is especially true for less densely populated areas. If these rules are introduced, a very large number of our flying schools (ATOs) will have to cease operation and new schools (ATOs) are unlikely to be established.

comment 1280 comment by: *Swiss International Airlines / Bruno Pfister*

Comment:

Within some (big) organisations, the ATO is part of a larger organization. A financial statement signed by the banker or auditor is normally not given for the ATO separately, but for the whole organisation as such. As these ATO's normally only train their own flight crew (who don't have to pay for the training) a separate financial statement is superfluous and unnecessary expensive.

Proposal:

Add provisions for ATO linked with, or part of, an airline

AMC to OR.ATO010(b)

Para 2c.

Whilst this may be deemed necessary for the conventional aeroplane flying school, it is entirely unnecessary for an organisation which does not own its own aircraft or facilities, does not operate from airfields and which is run by mostly volunteer, non-remunerated, staff. The organisation of many training organisations for Ballooning will fall into this category.

In this paragraph of the AMC, the AMC appears much more restrictive than the proposed regulation itself.

To allow the appropriate flexibility in this paragraph to meet the requirements

of proportionality of regulation, I propose paragraph 2c could be prefaced with the words:

**If required by the competent Authority, in order to amplify and justify the statements required in the paragraph above**, the plan submitted

.....

This would allow the competent Authorities to request this information if they deemed it necessary, but if the financial details provided were adequate would not be required.

comment

1702

comment by: *Fédération Française Aéronautique*

All the rules of this AMC are completely inappropriate and unrealistic for "Very small" (see our proposed definition in the FFA comment on NPA page 1 above) and "Small ATOs", which should be excluded from this AMC.

Consequently, FFA asks to modify the title in order the AMC only applies to "Other ATOs".

AMC to OR.ATO.010(b) 2.

**Wording in the NPA**

2. Application for initial approval.

Any application for initial approval should be supported by a plan, which includes at least the following information:

a. Training facilities and number of students Details, as appropriate, of:

- the number and types of training aircraft that will be used;
- the number of flight and ground instructors that will be employed;
- the number of classrooms and other types of training facilities (synthetic training devices, etc.) intended for use;
- the supporting infrastructure (staff offices, operations room, briefing rooms, rest rooms, hangars, etc.); and
- planned number of students (by month and course).

b. Financial Details

- capital expenditure necessary to provide the planned facilities;
- costs associated with running each of the courses for which approval is sought;
- income forecasts;
- a forecast financial operating statement for the business for which approval is sought; and
- of any other financial trading arrangement on which the viability of the approved training organisation may be dependent.

**Our proposal**

**Change:**

2. Application for initial approval.

Any application for initial approval should be supported by a plan, which includes ~~<delete: at least>~~ the following information **as applicable** :

a. Training facilities and number of students Details, as appropriate, of:

- the number and types of training aircraft that will be used;
- the number of flight and ground instructors ~~<delete: that will be employed>~~;
- the number of classrooms and other types of training facilities (synthetic training devices, etc.) intended for use;
- the supporting infrastructure (staff offices, operations room, briefing rooms, rest rooms, hangars, etc.); and

– planned number of students (by month and course).

b. Financial Details **in case of commercial operations**

.....

**Issue with current wording**

This is not appropriate for flying clubs where training is offered as needed and the financial basis is provided by the club members

**Rationale**

For non commercial ATOs typically operated by clubs a plan as defined above is not appropriate.

- There are no employed instructors. Instructors volunteer their service.
- There is no planned number of students. Training is provided as required by the members
- Training is usually provided free of charge without any commercial goal. The requested information regarding the financial details is not applicable.

AMC to OR.ATO.015 Application

The sailplane market is constantly developing. Sailplanes move constantly between clubs and between member states either through sale, new purchase or inter-club loan arrangements. There is no known reason why the approval would need to list the registration of aircraft used by the ATO. There is no safety case presented for this bureaucratic requirement, which would simply provide the NAAs with an excuse to charge money for every notifiable change to the glider fleet in an ATO. The gliders used in a training organisation are subject to EASA Part 21 and Part M rules; there is no need for additional bureaucracy in Part ATO.

Proposal.

Remove the requirement to list the registrations of aircraft used by the ATO.

**(Date)**                      (Signature)

comment 1703 comment by: Fédération Française Aéronautique

FFA draws the attention that in a "Very small" and "Small" organisation, the functions listed under lines 3 to 5 can be performed by one person.  
So the FFA asks that this information will be added.

comment 1704 comment by: Fédération Française Aéronautique

FFA requests to delete line 7 concerning "Aerodromes to be used", which is over-prescriptive and with no added value.  
FFA asks changing with the name of the main base aerodrome only.

comment 1705 comment by: Fédération Française Aéronautique

FFA draws the attention that in a "Very small" (see our proposed definition in the FFA comment on NPA page 1 above, namely, ATOs for basic LPL, LPL and PPL only) and "Small organisation", the rooms listed under lines 8 and 9 can be one room.

So the FFA asks that this information will be added.

comment 1706 comment by: Fédération Française Aéronautique

Generally speaking, FFA asks for a simplified form and a simplified approval procedure for "Very small training organisation" (see our proposed definition in the FFA comment on page 1 above, namely, ATOs for basic LPL, LPL and PPL only), and "Small training organisation". Present proposed approval procedure for the wrongly defined "Small organisation" is not adapted and actually impossible to implement for what the FFA call a "Very Small training organisation" (mainly non commercial, non profit organisation).

comment 1721 comment by: Baden-Württembergischer Luftfahrtverband

AMC to OR.ATO.015 3.

**Wording in the NPA**

3. Name of Head of Training, type and number of licence, full/part time

**Our proposal**

Change:

3. Name(s) of Head(s) of Training, type and number of licence, responsibility full/part time

**Issue with current wording**

There should be a provision for at least 2 levels of head of training, an overall head of training and head of training for different types of aircraft.

**Rationale**

Multiple head of training should be mentioned if all of them should have the competency to communicate with the competent authority e.g. to register students.

1. Instructors providing training on a FTD and a FNPT I should have instructional experience appropriate to the training courses they are to conduct and hold or have held a professional pilot license (issued by a EASA member state or a non EASA license acceptable to the Authority) prior to the first appointment.  
2. Instructors providing flight training on a FFS and/or FNPT II, should hold the license, rating and qualification for which instruction is being given.  
3. Instructors providing multi-pilot type rating and/or MCC flight training on a FFS and FTD and FNPT II/III, should hold a professional pilot license, have at least 1,500 hours as pilot of Multi-pilot airplanes, have completed in a FTD or FNPT II/III an approved course have conducted at least 3 hours of instruction on the approved course."

Right now FCL 1.310, 1.410, 1.417 just requires the license, rating and qualification for which instruction is being given. The way the NPA is currently written, it required an instructor to have a professional license for 3 years and sounds like they must have an EASA license with the particular EASA instructor rating.

1. Remove the 3 year requirement.
2. [remove: FI(A), FI(H), IRI(A), TRI(A), TRI(MPH), CRI(A), STI(A), SFI(A), SFI(H) or MCCI(A) certificate relevant to the course.]
3. [remove: TRI(A), TRI(MPH), SFI(A) or SFI(H) certificate.]

The statement concerning phasing of theoretical knowledge instruction and synthetic flight training does not allow for the occasions when an FSTD session may have to be scheduled prior to a theoretical knowledge instruction session.

**Proposal**

Change the requirement to state: "When practical, theoretical knowledge instruction should take place prior to synthetic flight training."

**Impact to FlightSafety**

The requirement to phase training in such a way that theoretical knowledge takes place before synthetic flight training would remove the flexibility in arranging training schedules to take maximum advantage of customer

requirements, FSTD availability, and instructor availability. This would place an enormous burden on operators and customers alike.

comment 5 comment by: *Marduc Aeronautical Consults*

10.2 to add the definition of aeroplane complexity, suggesting :  
all twin-turbine and twin-jet should be considered to receive a minimum of 32hrs FSTD training

comment 13 comment by: Ryanair

**Comment**

The wording in this section specifies "written" as the means of completing the test. This could be interpreted literally which would exclude a computerised system of delivering, taking and recording the result of an exam. Such a system is in use today having been approved by the IAA.

**Proposal**

9.2 The final theoretical knowledge examination should cover all areas of the theoretical knowledge syllabus. The final examination should be conducted as a supervised written or computer based knowledge test without reference to course material. The pass mark of 75% assumes the achievement of satisfactory levels of knowledge during the progressive phase tests of the course. The student should be advised of any areas of lack of knowledge displayed during the examination and, if necessary, given remedial instruction.

comment 240 comment by: ECA- European Cockpit Association

Comment: this section should be transferred to IR.

Justification:

This is the old Appendix to JAR-FCL 1.261, which dealt with the type rating courses. All other courses are in FCL as IR, and this one is left in AMC and in Organizational requirements, therefore to the discretion of the operators. This requirement should not be left at the discretion of the operators.

comment 242 comment by: ECA- European Cockpit Association

Comment: change text as follows:

1. Introduction.

1.1 A type rating course should, as far as possible, provide for a continuous process of ground, FSTD and flight training to enable the student to assimilate the knowledge and skills required to operate a specific aircraft type safely and efficiently. The student's ability to do this should be determined by the demonstration of a satisfactory level of theoretical knowledge of the aircraft determined by progressive checking of knowledge and examination, progressive assessment by the approved training organisation during flying training and the successful completion of a practical skill test with an examiner.

**~~There should be no difference in the level of knowledge or competency required of the student, irrespective of the intended role of the student as pilot in command, co-pilot or flight engineer member of the flight crew.~~**

Justification:

The pilots should not be required to have exactly the same level of knowledge as flight engineers.

comment 243 comment by: ECA- European Cockpit Association

ECA requests clarification about the paragraph on subcontracting in this article. Is there a transfer of responsibility to the contractor? Or is this only an administrative procedure ? What are the changes compared to the present situation? In which cases this article applies, only to the ones in the AMC/GM

comment

244

comment by: ECA- European Cockpit Association

Comment: delete paragraph 7.1 and replace with AMC 3 OR.ATO.125, paragraph 8:

~~7.1 CBT provides a valuable source of theoretical instruction, enabling the student to progress at his own pace within specified time limits. Many such systems ensure that syllabus subjects are fully covered and progress can be denied until a satisfactory assimilation of knowledge has been demonstrated. Such systems may allow selfstudy or distance learning, if they incorporate adequate knowledge testing procedures. When CBT is used as part of the theoretical knowledge instruction phase, the student should also have access to a suitably qualified instructor able to assist with areas of difficulty for the student. Where CBT aids are used as a training tool, the organisation should ensure that a fully qualified ground instructor is available at all times when such equipment is being used by course students. Other than for revision periods, CBT lessons should be briefed and debriefed by a qualified ground instructor.~~

Justification:

The previous version contained unuseful controversial statements.  
The helicopter version is clear enough.

comment

245

comment by: ECA- European Cockpit Association

Comment on paragraph 8:

8.1 Elements of the theoretical knowledge syllabus may be adequately addressed by distance learning, if approved, or selfstudy, particularly when utilising CBT. Progress testing, either by self-assessed or instructor-evaluated means should be included in any self-study programme. If self-study or distance learning is included in the theoretical knowledge training, the course should also provide for an adequate period of supervised consolidation and knowledge testing prior to the commencement of flight training.

Justification:

E learning is known as immediate learning that will request a sedimentation period. Therefore it would be wise to extend the knowledge supervision also during the flight training period.

comment

246

comment by: ECA- European Cockpit Association

Comment: change paragraph 10.2 as follows:

10.2 The amount of training required when using FSTDs will depend on the complexity of the aeroplane concerned, and to some extent on the previous experience of the pilot. Except for those courses giving credit for previous experience (para 3.2), a minimum of 32 hours FSTD training should be programmed for a crew of a multipilot aeroplane, of which at least 16 hours should be in a Full Flight Simulator operating as a crew. ~~Full Flight Simulator time may be reduced if other qualified FSTDs used during the flight training programme accurately replicate the cockpit environment, operation and aeroplane response. Such FSTDs may typically include FMC training devices using hardware and computer programmes~~

~~identical to those of the aeroplane, or type specific FNPT IIs.~~

Justification:

The use of full flight simulation is to be the closer replique of real operation including the flight handling. The fidelity of the cockpit should not lead to a FFS time reduction

comment 303

- comment 2399 comment by: FlightSafety International
1. Instructors providing training on a FTD and a FNPT I should have instructional experience appropriate to the training courses they are to conduct and hold or have held **a professional pilot license (issued by a EASA member state or a non EASA license acceptable to the Authority)** prior to the first appointment.
  2. Instructors providing flight training on a FFS and/or FNPT II, should hold **the license, rating and qualification for which instruction is being given.**
  3. Instructors providing multi-pilot type rating and/or MCC flight training on a

FFS and FTD and FNPT II/III, should hold a professional pilot license, have at least 1,500 hours as pilot of Multi-pilot airplanes, have completed in a FTD or FNPT II/III an approved course have conducted at least 3 hours of instruction on the approved course.”

Right now FCL 1.310, 1.410, 1.417 just requires the license, rating and qualification for which instruction is being given. The way the NPA is currently written, it required an instructor to have a professional license for **3** years and sounds like they must have an EASA license with the particular EASA instructor rating.

1. Remove the 3 year requirement.

2. [remove: FI(A), FI(H), IRI(A), TRI(A), TRI(MPH), CRI(A), STI(A), SFI(A), SFI(H) or MCCI(A) certificate relevant to the course.]

3. [remove: TRI(A), TRI(MPH), SFI(A) or SFI(H) certificate.]

A successful pass of theoretical knowledge course and final examination should be a pre-requisite for progression to the Skill Test only.

There is no safety case for not progressing to the flight training phase, and it has been proven to solidify the ground training phase.

The minimum course requirements will be defined by the manufacturer or ATO (via the OSC or supplemental OSC). The minimum training in an FSS should not be less than 16.0 hours for multi pilot aeroplanes and 10.0 hours for single pilot aeroplanes.

There is no safety justification to a minimum flight training course requirement without consideration for the complexity of the aircraft or the experience of the pilot being trained. This should be defined via the OSC based on an evaluation of the specific aircraft requirements.

Remove “provided it does not exceed 2 hours of the flight training course.”

There is no safety reason to limit this exercise to 2 hours or less.

Add the wording as per JAR-FCL 1.261(c)(2) Appendix 1 Paragraph 14 to include the ability to issue the Course Completion Certificate before the landings are completed in the aircraft.

Many ATOs do not have aircraft and much of this is contracted by the pilot taking the training using a third party aircraft and instructor.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart ATO - Section 1 - AMC 3 to OR.ATO.125 Training programme – type rating courses - helicopters**

p. 46-47

comment 240 ❖

comment by: ECA- European Cockpit Association

Comment: this section should be transferred to IR.

Justification:

This is the old Appendix to JAR-FCL 1.261, which dealt with the type rating courses. All other courses are in FCL as IR, and this one is left in AMC and in Organizational requirements, therefore to the discretion of the operators. This requirement should not be left at the discretion of the operators.

**Page No:**

47 of 83

**Paragraph No:** AMC 3 to OR.ATO.125, Paragraph 9**Comment:**

The training course should cover handling characteristics of the aircraft, particularly near the edge of the handling envelope. In particular, some helicopter types are susceptible to a phenomenon called 'servo transparency' or 'jack stall'. This should be specifically mentioned in the AMC.

**Justification:** Air Accidents Investigation Branch report EW/C/2007/09/06, AAIB Bulletin 2/2009, accident to G-CBHL. The report contains the following recommendation made to the UK CAA:

**Safety Recommendation 2008-069**

It is recommended that the Civil Aviation Authority, in conjunction with the European Aviation Safety Agency, require an awareness of the causes, symptoms, hazards, and recovery actions relating to 'servo transparency' or 'jack stall' encounters to be covered as a ground study item as part of the mandatory training for those helicopter types likely to be affected.

**Proposed Text (if applicable):**

e. giving the student the understanding of potential control problems near the edge of the handling envelope. In particular, the phenomenon of 'servo transparency' (also known as 'jack stall') should be covered for those helicopter types where it is a known problem.

comment by: *Rod Wood*

Para 2a. Consideration must be given to allowing this exercise to be completed in an un-licensed area, dual only and without fire cover. The practical reality of being able to establish a meaningful confined area in a licensed environment is almost impossible and commercially not viable.

comment

64

comment by: *George Knight*

It is unreasonable and disproportionate to require a small ATO teaching for LPL, PPL, SPL and BPL to be required to provide "1 (d) an air traffic control service.". This should be required only for professional licenses.

comment

75

comment by: *British Gliding Association*

Item 1 d in this part requires an air traffic control service.

Other than occasionally (subject to local arrangements) where gliding flight

training takes place within controlled airspace, there is no existing requirement to operate gliding flight training with air traffic control.

The safety case for introducing such a requirement has not been explained. Neither the NPA nor gliding safety data identifies a safety need.

The economic and organisational impact of requiring air traffic control oversight of gliding flight training would be very significant. The requirement is totally disproportional.

Proposal; Remove requirement 1.d and if necessary add '4. Air traffic control requirements are to be considered'.

comment 105 comment by: AOPA Switzerland

It does not make sense to limit the use of an aircraft to its MTOM. If a Cessna 172 (one of the most common training aircraft) is used by a student for solo training, the performance is as such that much shorter runways may be used than under MTOM. The proposed restriction is to withdraw.

comment 106 comment by: AOPA Switzerland

There is absolutely no need for air traffic control at training aerodromes. If appropriate training requires ATC, then the instructor and his student have to fly to a controlled airfield. Should the Agency stick to the proposed regulation, the very big majority of small airfields are going to be closed. The remaining controlled airfields are by far not able to take over the remaining training traffic.

comment 117 comment by: Bristow Academy

Para 1 (d) an air traffic control service, ***except where, with the approval of the Competent Authority, the training requirements may be satisfied safely by another acceptable means of air to ground communication.***

If an airfield ATC is not H24, flying training may safely continue, for example, out of normal hours or at night with an Airfield Flight Information Service or other means of Advisory service.

comment 146 comment by: Aero-Club of Switzerland

The Aero-Club of Switzerland does not accept what the Agency writes under

1.a.(i): Please reduce this requirement.

Justification: To take the hottest month of the year and a fully laden aircraft is simply not reasonable.

And 1.a.(ii): Please define the nature of the obstacles to be referred to!

Justification: The text of the Agency is not clear enough.

Your requirement under d. is absolutely unacceptable to us.

Proposal:  
Please delete this requirement

Justification: With the requirement d. "an air traffic control service" you kill the all activities of all group ATO working at small airfields serving VFR traffic only. And there are hundreds of them across Europe!

**For glider towing:**

The requirement 1.a.(ii) is not practical for towing on small airfields.

Proposal: please add 1.a.(v): for glider towing, a clearance of 50 ft over obstacle is not mandatory. But obstacles should be overflowed with a correct towspeed appropriate to the performance of the towplane and the glider.

Justification: A safe tow-speed is much more important when airborne than the clearance of 50 ft.

Clubs on small airfields would be pushed to use powerfull towplane only to fulfill the requirement 1.a.(ii). Powerfull towplanes with enormous fuel consumption and high noise production are against the interest of environmental protection.

comment

1097

comment by: *EUROPEAN GLIDING UNION***AMC OR.ATO.135 Aerodromes**

Once again this is written for commercial training organisations.

The requirement under item d) to have an air traffic control service is disproportionate, unnecessary and economically and operationally impossible in the a vast majority of cases in gliding. Most of the airfields from which gliding takes place are outside controlled airspace and outside the control of ATC in most EU countries. Most air sports activities, including gliding, take place on non-procedural aerodromes and other operating surfaces.

Further, the recent EU political decisions as regards the extension of EASA competence to aerodromes has removed most gliding aerodromes / airfields from this proposed extension. Therefore, the ATO proposed rules should not include any reference to ATC facilities for glider training airfields or operations.

If the proposed rules for ATC are sustained by EASA in its Opinion then the economic impact on gliding clubs will be so severe as to make glider training uneconomic if not in many cases terminal, as the cost of providing such services would be totally disproportionate and in fact unworkable for the nature of gliding operations.

**Proposal.**

Delete this requirement.

1. Under 2. & 3., sites are mentioned. The title should be amended to 'Aerodromes and sites', so that people will know where to look for the information.

2. Under 1. d., it would be extremely onerous on ATO's for e.g. sailplanes or seaplanes to have to transfer to an aerodrome with an air traffic control service for training. An exception should be made for these types as well as for balloons.

DCr 270509

comment

1301

comment by: *SWISS AERODROMES ASSOCIATION*

Our comment:

This formulation is too invasive and too restrictive. It is overshooting OR.ATO 135 by far, especially when talking about **base aerodrome an any alternative base aerodromes !**

It makes no sense to eliminate the localization of training organizations on smaller airfields, aerodromes without ATC or with a configuration that does not match with the proposed criteria !

Basic flight training and most of the training operations do not require facilities matching with the proposed criteria. ATC services for instance is unnecessary. And MTOM operations are exceptionnal during training. MTOM operations can be conducted, as well as familiarization with ATC, on other aerodromes than the homebase.

We suggest to delete this draft rule. Keeping it would affect a lot of smaller aerodromes where training is conducted and constitutes an important part of the aerodrome activity.

comment 1708 comment by: Fédération Française Aéronautique

AMC to OR.ATO.135 1, b :

FFA strongly requests to delete the words "from the ends of the runway", which is over-prescriptive and inappropriate on small aerodromes, very often used by "Very small training organisations" (see our proposed definition in the FFA comment on page 1 above, namely, ATOs for basic LPL, LPL and PPL only).

FFA proposes to ask for "A wind indicator shall be installed and visible from the apron and/or the holding points" (which seems much more important than "the ends of the runway"). It would be unrealistic on many aerodromes to require that the wind indicator be visible from both ends of the runway.

Furthermore, the FFA notes that the European Parliament decided on 25 March 2009 that "Small aerodromes" will be excluded from the EASA remit. So FFA believes that this AMC is not applicable to "Small aerodromes" and that it apply to "Large aerodromes" and "Other ATOs" only.

comment

1709

comment by: *Fédération Française Aéronautique*

AMC to OR ATO 135, 1, d

**FFA strongly requests to del ete the whole rule on "air traffic control service"**, which is over-prescriptive, unrealistic and surely impossible to implement, as a lot of "Very small ATOs" (see our proposed definition in the FFA comment on page 1 above) have their main base on aerodromes without any air traffic control service or with a non permanent air traffic control service.

During the training, a student pilot shall land at, and take-off from, controlled aerodromes. But this shall not lead to require an ATC service everywhere and every time.

Furthermore, the FFA notes that the European Parliament decided on 25 March 2009 that "Small aerodromes" will be excluded from the EASA remit. So FFA believes that this AMC is not applicable to "Small aerodromes" and that it apply to "large aerodromes" and "Other ATOs" only.

comment

1710

comment by: *Fédération Française Aéronautique*

AMC to OR ATO 135 1 a

FFA believes that it is unrealistic to require that the "Maximum take-off mass" limitation be respected systematically, and in all cases, on all aerodromes used for flight training. It is clearly over-prescriptive and inappropriate for "Very small" training organisations" (see our proposed definition in the FFA comment on page 1 above, namely, ATOs for basic LPL, LPL and PPL only) using "Small aerodromes", as the actual "Take-off mass" during training, is frequently under the maximum certified take-off mass.

Furthermore, the FFA notes that the European Parliament decided on 25 March 2009 that "Small aerodromes" will be excluded from the EASA remit. So FFA believes that this AMC is not applicable to "Small aerodromes" and that it apply to "large aerodromes" and "Other ATOs" only.

comment by: *CAA Norway*

AMC OR.ATO.135

Here we find a description of the level of standards for the base aerodrome and any alternative base aerodromes, used by ATOs.

In 1.d. it is specified an air traffic control service is needed.

This requirement makes sense for the training for CPL, IR, etc. For the

training for LPL, SPL and PPL, this might pose a very big problem. Also, for training for the Seaplane Rating, this will be very hard to fulfill.

In many cases, small ATOs giving training for SPL, LPL and PPL are located at small airfields, but near a bigger airport. Some reasons for this can be:

- Economical, landing fees are higher on airports with ATC than on smaller airfields – sometimes VERY much higher
- Accessibility, larger airports might have traffic congestion, making training flights impossible for extended periods of time

The normal practise is for the smaller ATOs to have their students fly to and from airports with ATC, to ensure their students get the necessary training and experience in ATC compliance. This is the objective of the training.

As long as this is achieved, the exact location of the ATO is less interesting. Please bear in mind that in some EASA member states, there might be hundreds of kilometers between airports with ATC services.

If this is changed to apply to ATOs not giving traing for only LPL, PPL or SPL, the problem is solved. If this is not limited in this manner, a large number of ATOs will cease, and training in particular for the "lower end" of licenses and ratings, i.e. those related in the most to airports, will be lost, with the implications following from this. It must be remembered that ATOs includes today's Registered Facilities.

In basic regulation 216 there is no mentioning of limiting ATOs to airports with ATC. This is a very large restriction as compared to JAR-FCL, in particular for the smaller ATOs, and it should be modified.

As stated previously, the important objective is not to regulate the location of the ATOs, but to ensure that students get the practice and experience needed to comply and function safely with ATC.

comment by: *K Franzen*

Comment: This requirement in AMC OR.ATO.135 1 for both base and ANY alternative base aerodromes means that it is impossible to train with lower than maximum take-off and landing mass on short runway with minimum length and subsequently not be exposed to the difficulties in using such aerodromes and learning to use small aerodromes.

The requirement in AMC OR.ATO.135 1 d means that it is impossible to provide training at aerodromes without ATC service and subsequently not be exposed to the difficulties in using such aerodromes and learning to use the radio to communicate with other aircraft in the circuit.

Proposal (including new text): It must be sufficient that the ATO has access to aerodromes for training at MTOM and the use of aerodromes without ATC must also be possible.

2292

comment by: Light Aircraft Association of the Czech Republic

Requirement stated in the AMC to OR.ATO.135 1(d) which require air traffic control service at the home base aerodrome are not acceptable for training organisations for LPL.

The requirement would in practice make most of today's flight training impossible in the mentioned licence categories.

Proposal:

remove requirement 1d from AMC.

If necessary add

4. Air traffic control requirements to be considered

comment

comment by: Deutscher Aero Club Landesverband Niedersachsen

### **Wording in the NPA**

1. Except in the case of balloons, the base aerodrome and any alternative base aerodromes at which flying training is being conducted should have at least the following facilities:

...  
d. an air traffic control service.

### **Our proposal**

**Delete** passage d.

### **Issue with current wording**

Many airports and airfields used for training do not have an air traffic control service.

### **Rationale**

Small airfields especially with focus on sailplane and touring motor glider do not have a traffic control service. These airfields shall not be excluded to be training locations. The European situation in air sport works since decades without air traffic control on these airfields without any risk hazard. This clause seems to be a pace-copy mistake.

comment

2321

comment by: *Danish Powerflying Union*

We suggest EASA to delete **AMS to OR:ATO.135. 1. d.**

It will make it impossible for several aeroclubs and flightschools to continue with their flight training if the regulations demand that flight training has to be conducted at an air traffic control service.

Many aeroclubs are located at uncontrolled airfields and flying in controlled air space is fulfilled according to the syllabus.

AMC OR.ATO.135 Aerodromes

This appears to be written for commercial training organisations.

The requirement under item d) to have an air traffic control service is disproportionate, unnecessary and economically and operationally impossible in the a vast majority of cases in the air sports community, particularly for gliding sites, certainly for ballooning sites (how will ATC be provided for the place where a balloon lands?!).

Most of the airfields from which gliding in particular takes place are outside controlled airspace and outside the control of ATC in most EU countries. Most air sports activities, including gliding, take place on non-procedural aerodromes and other operating surfaces.

Further, the recent EU political decisions as regards the extension of EASA competence to aerodromes has removed most aerodromes / airfields that are used by ATOs for training air sports and recreational aviation pilots from this proposed extension. Therefore, the ATO proposed rules should not include any reference to ATC facilities for training airfields or operations in the sector EAS represents.

If the proposed rules for ATC are sustained by EASA in its Opinion then the economic impact on air sport clubs will be so severe as to make pilot training uneconomic if not in many cases terminal, as the cost of providing

such services would be totally disproportionate and in fact unworkable for the nature of operations.

Proposal

Delete this requirement.

comment

2354

comment by: *Europe Air Sports PM*

For glider towing:

The requirement 1.a.(ii) is not practical for towing on small gliding airfields.

Further, the recent EU political decisions as regards the extension of EASA competence to aerodromes has removed most gliding aerodromes / airfields from this proposed extension. Therefore, the ATO proposed rules should not include any reference to aerodrome features for glider training airfields.

This is not a subject (airfield departure physical clearances) that should be included in ATO rules.

Proposal:

Delete this requirement.

comment

comment by: *Swiss Power Flight Union*

We never can accept, what the Agency writes under 1.a.(i) (ii), please reduce this requirements for a reasonable praxis.

For a lot of small airfields is that the end of flight training operations. Is that the meaning from EASA?

We never can accept, what the Agency writes under 1.d.

For VFR flight training is an ATC absolut not necessary.

Question: Will the EASA kill a lot of small airfields?

Comment:

A lot of small ATO conducting flight training for PPL or SPL operate from aerodromes without ATC service.

Proposal : Delete d)

comment

2413

comment by: *EPFU is the European Union of national powered flying organisation from the 10 main European countries*

EPFU points out that the request of an "Air traffic control service" for all aerodromes used by a Flight training organisation is a non sense for all Small

non commercial, non profit training organisations.

EPFU requests that this requirement will be deleted as it shows a total ignorance of the reality within that sort of small training organisation!

comment 2450 comment by: *Norwegian Air Sports Federation, Gliding Section*

The Gliding Section of the Norwegian Air Sports Federation disagrees with the requirement for minimum 50 feet obstacle clearance, if applied to sailplane training using aerotow. In many cases, gliding clubs use grass airfields of around 600 m length. This requirement would force clubs to either shut down training from their airfield, or to use more expensive and/or less environmentally friendly (fuel consumption, emissions, noise) tow planes.

comment 2451 comment by: *Norwegian Air Sports Federation, Gliding Section*

The Gliding Section of the Norwegian Air Sports Federation disagrees with the requirement for the base aerodrome to have an air traffic control service, if applied to flying training in sailplanes (or in light aeroplanes for a PPL).

The large majority of sailplane flying training (and a significant portion of PPL training in light aeroplanes) in Europe is done at airfields without air traffic control.

Applying such a regulation to sailplane training would probably force the shutdown of the majority of gliding club training operations, as airfields with air traffic control will not have the capacity to accommodate sailplane training activities, or will be too far away from the current bases of gliding clubs.

comment 2454 comment by: *Aéro.Sport asbl. Luxembourg*

Our proposal:  
Delete this passage d.  
Reason:

By requiring an air traffic control service, most of the aerodromes currently used for training, will be banned, and that at a time where more and more countries are eliminating air traffic control or information service at their aerodromes for cost-efficiency reasons.

Most of these uncontrolled aerodromes are not asking for landing fees, and banning them from operation will help to kill small and non-commercial ATO's.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart ATO - Section 2 - AMC 1 to OR.ATO.210 Personnel requirements**

p. 49

comment 4 comment by: *Michel Lacombe AF TRTO*

In additionnal ratings to limit the class number at 12 students seems a bit restrictive.

I propose :

**AMC 1 to OR.ATO.210**

7. Class numbers in ground subjects involving a high degree of supervision or practical work should not exceed 12 students when training for license or initial rating and 18 for additional rating.

comment 366

comment by: OAA Oxford

General. 6: Ratio is not appropriate. Many FTOs structure their integrated courses to allow students to complete all TK training and examinations prior to entering the flight training phase. As such, the number of students undergoing the TK training phase has no relevance to the number of flight instructors. This clause appears to reflect the previous model of flying and TK training being mixed on a daily basis.

Recommendation: add 'engaged in the flight training aspect of the course' after 'all students'.

comment 540

comment by: UK CAA

**Page No:**

We do not agree with your view on this subject. We understand the reason to limit the classes with regards to extensive practical work, however we do not see why the aviation training industry should be exclusive to other educational institutions that do not have limitations like this. By stating this you either make the instructors or the students in the aviation training industry to be of a lesser quality. Even though it just states "should" we suggest that you add to this text:

", except as approved by the Authority."

- comment 869 comment by: *Frank Scheppe*  
 Concerning AMC 2 to OR.ATO.210 Personnel requirements:  
 1. Head of Training. No professional pilots licences exist for balloons. The highest level will be an EASA BPL with commercial privileges. I would suggest to amend the text as follows:  
 The nominated HT should hold or have held in the 3 years prior to first appointment as an HT, a professional pilot licence, or in the case of non-motorized operations, a BPL or SPL, with associated ratings issued in accordance with Part-FCL, related to the flying training courses conducted.

2. Chief flying instructor (CFI) should:

(i) hold the highest professional pilot licence or, in the case of non-motorized operations, a BPL or SPL, and the ratings related to the flying courses conducted;

(2) have completed 1000 hours of flight time, or in the case of balloon operations 500 hours of flight time, as pilot-in-command, of which at least 500 hours (in the case of balloons: 100 hours) shall be on flying instructional duties related to the courses conducted, of which 200 hours may be instrument ground time (with the exception of balloon operations, where instrument ground time is not applicable).

Explanation: there are almost no balloon instructors on the planet with 500 hours experience in instruction, and many of the more experienced balloon pilots still have flown less than 1000 hours. This is due to the extreme weather sensibility of balloons, as a result of which most pilots fly only several tens of hours per season (april - october), with the exception of a small number of fulltime professional pilots. Most instructors are parttimers or volunteers, having no more than one or two students at a time, to whom they dedicate their attention for two ye weatherars or so. Ballooning also has developed mostly during the past decade into a substantial activity, meaning that the majority of people presently involved in flying tourists or doing aerial work for sponsors have less than 10 years as P1; very few pilots manage to fly more than 100 hours a year; the average for frequent flyers is closer to 40-50 hours per annum. Thus, good pilots can be found who are sufficiently experienced to give practical instruction (balloons being technically simple) but very likely most of them will not yet have flown 1000 hours, and certainly not given 500 hours of instruction.

In fixed wing operations a lot of instruction can be given on flight simulators, and fixed-wing morotized aircraft can fly in most weather conditions, certainly in conditions that are impossible for balloons. Thus it is far easier for fixed-wing pilots to reach such high numbers of flight hours. There are no simulators for balloons and no reasonable way to do instruction on the ground in place of true flying.

Thus it seems reasonable to set the limits considerably lower for instructors only offering training for the BPL.

comment by: FlightSafety International

Remove the requirement for the Head of Training to hold a licence issued in accprdance with Part FCL. There is no safety reason for this.

The requirements for TK ground instructors and Head of Training and CFI are

defined in the IR and should not be repeated in the AMC.  
 Remove paragraph 8 and 10 of AMC 1.  
 Remove Paragraph 1 of AMC2.

Paragraph 9 sufficiently addresses the requirements for a TKGI. Further, this is repeated from the IRs.

The requirements for the Head of Training are sufficiently defined in the IRs and furthermore requiring a Head of Training to hold or have held an EASA professional licence is a limiting factor not supported by safety requirements. JAR-FCL 1.055 Appendix 2 Paragraph 12 only states the Head of Training must be acceptable to the authorities.

Training effectiveness

To make sure that a student makes progress, it is often important to have the opinion of another flight instructor. The student may want to change the instructor for personal preferences or other reasons, a flight instructor is leaving, one student takes lessons with various FIs etc. In any case, the changing of an instructor may occur in many circumstances and is not negative for a student. Therefore, it should be possible to change instructors effortlessly. What is important, however, is the communication between the instructors to make sure there aren't any duplicities in the training programme of the student. This shall be achieved with the training records.

comment 544 comment by: *UK CAA*

**Page No:**

54 of 83

**Paragraph No:** AMC 1 to OR.ATO.300 (a)(1)

**Comment:**

Para 3 (Audit Scope) item (x) states the need to monitor "Aircraft modification management". This is perhaps incorrect in relation to an ATO with simulator privileges.

**Justification:**

This part of the AMC is about ATOs using FSTDs. An ATO will not undertake aircraft modification management, but would clearly monitor FSTD configuration management (which will itself have an element of aircraft modification assessment).

**Proposed Text (if applicable):**

Amend item x in AMC 1 to OR.ATO.300 (a)(1) paragraph 3.x. to read: -

x. FSTD configuration management

comment 731 comment by: *Maarten*

What is this? An other flyingclub- and this time also a safety killer? How much time and money has to be spend on a CMP/CMS/CMS programme? I presume

that when a simulator is sold that it complies with the regulations, like an aircraft (with a big difference, a FSTD stays on the ground!). If the FSTD doesn't allow me to write the hours in my flyinglog, then I won't pay to use it. The flyingclubs won't buy an FSTD if the club pilots don't want to use it. I think we don't need a CMP/CMS/CMS programme for this. Please scrap.

comment 950

comment by: INAER

### **AMC 1 to OR.ATO.300 (a) (1) General**

#### **"Compliance Monitoring Programme – ATOs Operating FSTDs"**

Suggested: "**Compliance Management system planning**", or

Argument:

a) System Planning:

It should be used EN ISO 9000:2000, EN ISO 9001:2008, EN ISO 14001:2004 vocabulary as much as possible, to provide legal certainty to the stakeholders.

System planning is defined in element 3.2.9 from ISO 9000:2000, and applied in element 5.4.2 from ISO 9001:2008.

The term "Programme" is applied in international management standards with a different meaning, referring to specific actions (normally for the short term) that include responsibilities, means and compromised dates (see element 4.3.3 EN ISO 14001:2004). It usually has an annual validity, and it has to be rewritten and approved again after that year.

A programme is not the sum of planning of a set of inspections (which are periodically performed) plus the criterias for performing audits to the procedures. (e.g., in GM1 to OR.ATO.300 it specifies that the "compliance monitoring programme monitors the execution of these procedures".)

EN ISO 9000:2000 refers to that concept as "Audit Programme", and no confusion should be introduced between the different concepts in "audits programme, compliance assurance audit schedule (see Paragraph 21, GM1 to OR.ATO.300), assurance system, inspection planning and annual actions for improvement".

"System planning" covers the establishment of both a quality control system (for inspections) and an assurance system (with an annual audit programme). The term "System planning" is more atemporal.

In GM1 to OR.ATO.300 the term "Compliance Monitoring System" as opposed to "Programme" is used.

The comment is valid for the vocabulary used throughout section 3, whenever this terms appears.

b) Management, instead of Monitoring:

- As is stated later (see GM1 and GM2 to OR.ATO.300), the CMS is made of:
- A Compliance Assurance System, with procedures and audits of them, to give confidence
  - A Compliance Control System, to perform inspection to the product or service, to control the quality requirements compliance.

- A Compliance Management system, to set objectives and metrics, and continuously improve the performance of the system.

comment 951

comment by: *INAER*

**AMC 1 to OR.ATO.300 (a) (1), paragraph 2:  
"Compliance monitoring programme"**

Suggested: **"Compliance assurance and compliance control planning"**

The term "programme" is used with a different meaning as in the title, as the audits are not covered.

The term "Monitoring and inspection planning is used in 7.1 and 8.2.4 in EN ISO 9001:2008, for the subjects covered.

Paragraph 19 states that "it is important to understand the difference between Compliance Assurance and Compliance Control".

comment 2276

comment by: *Oxford Aviation Academy*

There is avoidable duplication with respect to the proposed regulations and AMC concerning the compliance monitoring system an Organisation is required to establish. The compliance monitoring system guidance proposed in AMC 1/2 to OR.GEN.200(a)(7) is intended to be generic and appears to be based on JAR-FCL and therefore only addresses training elements. For training organisations operating FSTDs there is additional compliance monitoring system guidance proposed in GM 1 to OR.ATO.300 that goes far more into depth and methodology than that stated in AMC 1 to OR.GEN.200(a)(7), and is obviously based on the JAR-FSTD quality system requirements. A compliance (quality) monitoring system is GENERIC and will address all aspects of an organisation's operations, whether providing basic training, type training, maintenance training, operating FSTDs, or even maintaining own aircraft. The system will be tailored depending on what activities are relevant, and this is actually stated in AMC 1 to OR.GEN.200(a)(7), 4.(a)(iii). We believe that it is not necessary to propose two sets of CMS AMC/guidance because it may lead to the conclusion that organisations providing training activities and operating FSTDs will need to maintain two independent compliance monitoring systems. As far as we understand, if a company is an FSTD operator only (no training conducted) they will still require an ATO approval. Therefore the proposals for a compliance monitoring system need only be stated once. The proposals in this area would appear immature and need more work so that GM 1 to OR.ATO.300 is deleted but with relevant texts incorporated into AMC 1/2 to OR.GEN.200(a)(7), or a new GM 1 to OR.GEN.200(a)(7) developed.

23....training in QMS....

*Alteon comment:*

Safety and compliance wording could be changed to quality which captures both concepts.

comment

29

comment by: Alteon

DELETE this wording from para 5;

it still remains a requirement for a hardcopy master, with wetink signatures to be held by the applicant.

comment:

If enough electronic control measures are in place no need to keep the burden of wet ink

comment

455

comment by: FlightSafety International

**Comment**

The statement: "An effective CMS is vitally important in supporting operation of the devices, in a structured way, to ensure they remain in compliance with the technical standards of CS-FSTD(A) and CS-FSTD(H) and continue to be effective training tools." is editorial opinion.

**Proposal**

Remove the statement in it's entirety.

**Impact to FlightSafety**

Editorial opinion has no place in a regulatory document, no matter how well-intentioned the statement may be. It can be proven from decades of operational experience and thousands of training events that a device can be adequately maintained to appropriate technical standards without a Compliance Monitoring System.

comment 456

comment by: *FlightSafety International***Comment**

The requirement for a hard-copy master, with wet-ink signatures, to be held by the applicant negates any value in having electronic documents.

**Proposal**

Remove the requirement for a hard-copy master with wet-ink signatures in cases where electronic masters with digital signatures are used.

**Impact to FlightSafety**

The requirement for a duplicate hard-copy master with wet-ink signatures is a burden on operators who wish to become environmentally responsible and curtail the use of paper documents as much as possible. If suitable controls are in place for the use of electronic masters with digital signatures, there should be no requirement for hard copies.

comment 457

comment by: *FlightSafety International***Comment**

Section 6 in it's entirety is editorial opinion.

comment 459

comment by: *FlightSafety International***Comment**

Section 8 in it's entirety is editorial opinion.

**Proposal**

Remove this statement in it's entirety.

**Impact to FlightSafety**

Editorial opinion has no place in a regulatory document, no matter how well-intentioned the statement may be.

comment 460

comment by: *FlightSafety International***Comment**

Section 9 again confuses the role of Safety Manager with that of Compliance Manager.

**Proposal**

Change the Safety Manager title to Compliance Manager.

**Impact to FlightSafety**

All references to Safety Manager wherein the requirements are actually that of a Compliance Manager should be corrected as the switching between terms is confusing.

comment 461

comment by: *FlightSafety International***Comment**

Sections 10, 11, 12, and 13 are all editorial opinion.

**Proposal**

Remove these statements in their entirety.

**Impact to FlightSafety**

Editorial opinion has no place in a regulatory document, no matter how well-intentioned the statement may be.

comment 462

comment by: *FlightSafety International***Comment**

Sections 10, 11, 12, and 13 are all editorial opinion.

**Proposal**

Remove these statements in their entirety.

**Impact to FlightSafety**

Editorial opinion has no place in a regulatory document, no matter how well-intentioned the statement may be.

comment 463 comment by: *FlightSafety International*

**Comment**

Section 14 imposes end-to-end traceability requirements which are of no use to operators.

**Proposal**

Remove the traceability requirement.

**Impact to FlightSafety**

This requirement provides no useful information for operators of a CMS. It is there merely for the convenience of NAA auditors, few of which currently actually look for evidence that this requirement is met. A comprehensive CMS is a tool for the operator and end-to-end traceability adds no value to the tool.

comment 464 comment by: *FlightSafety International*

**Comment**

Section 15 requires the CMS manual to have "an overview of all processes."

**Proposal**

Change the requirement to state "a list or index of all processes."

**Impact to FlightSafety**

There is no definition of what an overview should contain, and therefore is open to an auditor's interpretation. The CMS manual consists of all the relevant processes so no overview is necessary. A list or index is sufficient.

comment 465 comment by: *FlightSafety International*

**Comment**

Section 15 requires the CMS manual to include, either directly or by reference, the identification of skills and experience and associated training."

**Proposal**

Remove the requirement in it's entirety.

**Impact to FlightSafety**

This requirement forces an operator to make available what in many countries is considered confidential personal information. In addition, with changes of personnel, the CMS manual would be in a constant cycle of revision and approval.

comment 466 comment by: *FlightSafety International*

**Comment**

Section 20 uses the term "product inspections." This term is undefined.

**Proposal**

Change the wording to say "FSTD inspections."

**Impact to FlightSafety**

This change will clarify the intent of the requirement.

comment 467

comment by: *FlightSafety International***Comment**

Section 21 requires that the Compliance audit schedule includes the schedule for each FSTD for fly outs and QTG running throughout the audit year.

**Proposal**

Remove the requirement that fly outs and QTG running be included in the compliance audit schedule.

**Impact to FlightSafety**

Fly outs and QTG running are part of the process for maintaining qualification of the FSTD. That process is audited according to the compliance audit schedule. To break down processes and add individual elements of processes to the audit schedule would result in a massive scheduling document that would be so detailed and complex as to make it unmanageable.

comment 468

comment by: *FlightSafety International***Comment**

Section 23 requires that auditors have knowledge of FSTD requirements and operation, and "expects" that they have received training in CMS and audit techniques. This contradicts other statements within the Rule, and every bit of professional auditor training we have received.

**Proposal**

Change the requirement to state: "Auditors must have training in CMS and audit techniques and an introduction to FSTD requirements and operation. They are not required to have an FSTD support or operations background."

**Impact to FlightSafety**

We have experienced over many years of operating a QS, that good auditors do not have to have experience in FSTD requirements and operation. If they are well-trained in audit technique, a good auditor can audit virtually any process. The requirement to have in effect, FSTD personnel as auditors for the FSTD operation, results in a serious conflict of interest for the auditor.

comment 469

comment by: *FlightSafety International***Comment**

The requirement to maintain independence of the auditors is seriously compromised by previous requirements that auditors have knowledge of FSTD requirements and operation.

**Proposal**

If the proposal to change section 23 of GM 1 to OR.ATO.300 is followed, there will be no concerns about conflict of interest.

**Impact to FlightSafety**

Requiring that auditors be FSTD personnel is a tremendous resource burden to the operator, and provides no better an audit programme. In our experience, the best auditors of FSTD operation and support have been non-FSTD personnel.

comment

470

comment by: *FlightSafety International***Comment**

Section 26 requires that obsolete documents be retained for a period of 5 years.

**Proposal**

Remove the requirement that obsolete documents be retained.

**Impact to FlightSafety**

The requirement to retain obsolete documents imposes an unnecessary financial and resource burden on operators. Obsolete documents are by definition, no longer useful. Storage of them serves no useful purpose. There is some benefit to keep obsolete documents for historic knowledge preservation but that is far beyond the scope of the Rule.

comment

471

comment by: *FlightSafety International***Comment**

Section 27 confuses vendors (suppliers of devices to the operator) with subcontractors who perform CMS services for the operator, and is an editorial opinion lashing out at ISO9000. It attempts to give the Authority a revenue stream for auditing outside the ATO.

**Proposal**

Change this section to state: "The ATO is responsible for compliance to the requirements of the Rule, including the assurance to itself that services provided by subcontractors or devices provided by vendors meet the requirements of the ATO. This may include audits of subcontractors and/or vendors by the ATO."

**Impact to FlightSafety**

The monitoring of subcontracted services such as document control, auditing, device maintenance, etc. within an ATO has always been good business practice. The subject of subcontractors who provide a service and vendors who provide a device has resulted in hours of discussion. Of all NAA auditors we have encountered, only two seem to be confused by the vendor/subcontractor/ATO relationship. One of them obviously wrote this GM. The 'soft requirement' that the Authority may audit sub-contractors is seen by industry as just another attempt at generating revenue, with absolutely no value added to the ATO.

comment

472

comment by: *FlightSafety International***Comment**

Section 28 in its entirety is editorial opinion.

**Proposal**

Remove this statement in its entirety.

**Impact to FlightSafety**

Editorial opinion has no place in a regulatory document, no matter how well-intentioned the statement may be.

comment 473

comment by: *FlightSafety International***Comment**

Section 30 imposes a requirement to compare an individual simulator's performance to that of the ATO's simulator fleet. The section also suggests sharing of data with the simulator manufacturer in hope of addressing possible fleet wide solutions to design issues.

**Proposal**

Change this section to read: "ARINC Report 433 provides guidance on simulator quality metrics."

**Impact to FlightSafety**

The comparison suggested by this section, though it may have business decision benefits, in no way provides data regarding the ability of the particular FSTD to comply with the requirements of the Rule. The attempt by the author to insert the Authority into business decisions of the ATO is not appreciated by the operators.

comment 546

comment by: *UK CAA***Page No:**

**Paragraph No:** GM 1 to OR.ATO.300**Comment:**

A general comment is that this section of GM has been cut and pasted from JAA TGL 9 and should be carefully re-assessed for appropriateness and to eliminate duplication with other parts of AMC and guidance material.

**Justification:**

TGL 9 contains a lot of language and duplication not appropriate to Community regulatory material, even at GM level. A number of UK CAA comments follow relating to this area, but it is clear that the editing activity placed a high level of reliance on TGL 9 without a detailed review and this section should be revisited, taking into account any separate and specific comments made which will assist in such a review.

**Proposed Text (if applicable):**

None: See other comments against this GM.

comment by: UK CAA

**Page No:**

55 of 83

**Paragraph No:** GM 1 to OR.ATO.300 Para 4

**Comment:**

Amend Line 4 to correct syntax and for clarity.

Delete final text regarding the facilitation of briefing as this is not strictly true. Reference to the "third" column in isolation is incorrect (should read "second column").

Correct references to "authority" to read "competent authority".

**Justification:**

Line 4 does not read correctly. The primary reason for the guidance is clearly

identified as being to help preparation for competent authority visits. The reference to facilitation of the briefing is part of the authority visit and is therefore duplication. The table has been modified to delete column 1 compared to the TGL 9 version so the reference to third column becomes incorrect.

**Proposed Text (if applicable):**

Proposed amendment and deletion of text in to Para 4 of GM 1 to OR.ATO.300 (deletions are ~~struck through~~) amendments *italic/underlined*)

4. Also included, as Appendices to this guidance material and Subpart are an ATO operating FSTDs Compliance Checklist (GM 2 to OR.ATO.300) and guidance detailing the preparation for a competent authority Evaluation (GM 3 to OR.ATO.300). The Compliance Checklist should be used by the Authorities as a standardised checklist for the elements that are expected in the CMS of an ATO operating FSTDs CMS. The ATO should complete as a minimum the second column of the checklist by providing appropriate manual or procedure references for each of the identified elements of the CMS. Additional information can be provided in the third column to aid assessment of the checklist as appropriate. This would then be provided to the competent Authority. Use of this checklist should assist in ensuring a consistent approach by the competent authority and also provide the ATOs with additional guidance on all the elements of a CMS that the Authorities will expect to be reflected in an effective CMS. The guidance is provided to help ATOs to prepare for competent Authority visits. ~~—and to facilitate the preliminary briefing that is the first step of any initial or recurrent evaluation of a Flight Simulation Training Device carried out by an Authority~~

**Paragraph No:** GM 1 to OR.ATO.300 Para 24**Comment:**

Delete the text discussing the assignment of pilots by an independent ATO.

**Justification:**

Not considered appropriate in style or content for Community regulatory material.

**Proposed Text (if applicable):**GM 1 to OR.ATO.300 Para 24 proposed deletions are shown ~~struck out~~.

24. The routine flyouts of the device are a specialised part of the audit programme. It is essential that the pilots tasked with carrying out these flyouts are adequately experienced. They would be expected to be TRI/TRE qualified on the type, and should have experience of simulator evaluations carried out by the *(competent?)* Authority. ~~The assignment of such pilots can present difficulties, particularly for the independent ATO operating FSTDs not directly associated with an airline. It is vital for the ATO to ensure their users are aware of the importance of the flyouts as part of the continued qualification of the device and the need to assist in the provision of suitably qualified pilots to carry them out. It is worth noting that simulator users are required to satisfy themselves that the training devices they use are assessed for continued suitability, as part of their own CMP. Involvement in flyouts assists in meeting this need.~~

**Paragraph No:** GM 1 to OR.ATO.300 Para 29

**Comment:**

Propose amendment to text to refer to management reviews.

**Justification:**

Apart from review by the authorities, the prime purpose of the metrics is to

allow analysis and trend monitoring as part of the management evaluation and feedback system to the Accountable Manager. This needs to be reflected in the GM.

**Proposed Text (if applicable):**

GM 1 to OR.ATO.300 proposed amendment of text in Para 29 (amendments *italic/underlined*)

29. Any effective CMS will include measurement of its effectiveness. The ATO should develop performance measures that can be monitored against objectives. Such measures, often referred to as Metrics, should be reviewed by the Authority as part of its oversight of the CMS within the ATO and during recurrent evaluations. In addition they should form part of the data reviewed during scheduled management reviews as part of the CMS.

comment

732

comment by: Maarten

7. - ".....accountable manager and safety manager have to be acceptable to the Authority....."?? Acceptable on which grounds? Blue eyes? Big breasts? Most flyingclubs have people to look after the money and safety, but are they acceptable? Definition unclear(able) so scrap.

- "..... Authority should be satisfied....."?? With how much bottles of whisky or crates of beer? Definition unclear(able) so scrap.

This section 7 (and not only this section!!) is open to all good and especially bad interpretations who will give the opposite effect of what is intended and that is good trained pilots, because it takes funds and time away, whom could be spend on safe training in flyingclubs with FTSD's.

9. - What are "....small organisations....."?? One plane, one pilot, one staff, one manager, one instructor, one FTSD, one .....? This is the bottleneck of the whole ATO easa project. Small organisations are at least all non-profit flyingclubs. Definition unclear. Or scrap a lot more in the ATO regulations or create a clear exception for small ATO with FTSD.

comment by: INAER

Paragraph 6, GM1 to OR.ATO.300

**"...and a Compliance Monitoring Programme (CMP) to monitor the execution of these procedures"**

Suggested: **"...and an Audit Programme to monitor the execution of these procedures"**

Argument: Use the international terms defined in 3.9.2 ISO 9000:2000, to provide legal certainty to the stakeholders and avoid confusion. If the term is maintained, it should be defined clearly what is a CMP (e.g., does it include an "Inspection Planning", "Compliance Control" or just "Audit programme"?)

comment

953

comment by: INAER

Paragraph 6, GM1 to OR.ATO.300

**The accountable Manager and the Safety Manager have to be acceptable to the Authority.**

Suggested: This is a requirement, not guidance material. Therefore, if it is maintained, it should be a requirement in Part OR.

comment 954 comment by: INAER

Paragraph 6, GM1 to OR.ATO.300

**Term "Safety Manager":**

Is the Safety Manager specific for the ATO, or is one post for the whole Organization.

comment 955 comment by: INAER

Paragraph 6, GM1 to OR.ATO.300

**Term "Safety Manager":**

It should be clarified if the safety manager is the former "FSTD quality manager", or it is a new role that has to be coordinated with the "FSTD quality manager".

comment 956 comment by: INAER

Paragraph 8+27, GM1 to OR.ATO.300

**Term "ISO 9000"**

The term "ISO 9001" should be used, as it is the standard with requirements. ISO 9000 provides fundamental and vocabulary.

comment 957 comment by: INAER

Paragraph 8, GM1 to OR.ATO.300

**"ISO 9001 may not provide full compliance with all elements of the applicable requirements".**

It's not correct, as ISO 9001 requires compliance with all legal and regulatory requirements (see 5.1, 5.3, 7.2.1, and 7.3.2), which in the future includes also PART GEN, ATO, ...).

(A different question is whether an ISO 9001 certification is reliable or not to the Authority)

comment 958 comment by: INAER

Paragraph 9, GM1 to OR.ATO.300

**"and have the necessary direct reporting lines to the overall Safety Manager and Accountable Manager".**

Suggested:

"and have the necessary direct reporting lines to the overall Safety Manager".

Argument: The direct reporting line should be guaranteed with the hierarchical dependence. The Safety Manager is the one who reports the Accountable Manager with operational incidents and non-compliances.

comment 959 comment by: INAER

**1) Paragraph 9, GM1 to OR.ATO.300**

**"In most cases,** it will also be necessary to ensure that local Representative are also acceptable to the local NAA"

Suggestion: **Eliminate the sentence.**

Argument: Provides legal uncertainty and discretionary authority decisions. Delegated responsibilities must not be under the supervision of the NAA.

comment 960

comment by: INAER

Paragraph 10, GM1 to OR.ATO.300

**"The CMS as a whole begins... for example, Health and Safety Codes".**

**Suggestion: Eliminate any reference to HS**

**Argument:** Health and Safety is a discipline out of the object of a Compliance Monitoring System. In fact, EASA is not competent in providing Opinions in Health and Safety requirements, nor the NAA approving H&S procedures. The person in charge of Health and Safety requirement compliance is a different one (with different legal background) to the Safety Manager.

comment 961

comment by: INAER

Paragraph 10, GM1 to OR.ATO.300

**" The CMS ... and the compliance Monitoring objectives, such as defect rates, and rectification intervals..."**

Suggestion: Either eliminate, or change the term "CMS" to "Compliance management System (CMS)".

Argument: A CMS is a quality assurance system (see EN ISO 9000:2000, part 3.2.11), and not a management system (see EN ISO 9000:2000, part 3.2.8). Objectives setting and monitoring is part of a management system, and it can be dealt by a different manager from the Safety Manager in the organization.

comment 962

comment by: INAER

Paragraph 13 and 18, GM1 to OR.ATO.300

"all the above would be documented in a manual and a procedures manual with ...."

Suggestion:

"all the above would be documented in a manual and a set of procedures with ...."

Argument: If a document hierarchy is to be established, the manual is a top document, and the set of procedures the next level. Therefore, the term "manual" should be avoided to refer to the procedures.

comment 963

comment by: INAER

Paragraph 17, GM1 to OR.ATO.300

**"The CM S docu mentation als o includes all recor ds such as technical logs, ..."**

Suggestion: "The CMS documentation also includes **all forms for the records** such as technical logs, ..."

Argument: A record is the evidence of the result of an activity, and its controlled associated document is the form.

comment 964

comment by: *INAER*

Paragraph 17, GM1 to OR.ATO.300

**"Any effective CMS will include measurement of its effectiveness. The ATO should develop performance measures that can be monitored against objectives".**

**Suggestion:** If the performance is to be measured (and shown to the Authority), the CMS is not a Compliance Monitoring System, but a "Compliance Management System", used to control and manage the ATO regarding safety performance.

**Argument:** See EN ISO 9000:2000 standard, paragraph 3.2.8 and 3.2.11.

comment 2028

comment by: *AIRBUS*

According to the NPA, the CMS functions are held by the Accountable Manager or the Safety Manager. EASA should add the possibility for ATO operating FSTDs to appoint a Compliance Monitoring Manager. The GM 2 to OR.ATO.300 should also be modified accordingly.

comment 2279

comment by: *Oxford Aviation Academy*

There is avoidable duplication with respect to the proposed regulations and guidance concerning the compliance monitoring system an Organisation is required to establish. The compliance monitoring system proposed in AMC 1 to OR.GEN.200(a)(7) is intended to be generic and appears to be based on JAR-FCL and therefore only addresses training elements. For training organisations operating FSTDs there is additional compliance monitoring system guidance proposed in GM 1 to OR.ATO.300 that goes far more into depth and methodology than that stated in AMC 1 to OR.GEN.200(a)(7), and is obviously based on the JAR-FSTD quality system requirements. A compliance (quality) monitoring system is GENERIC and will address all aspects of an organisation's operations, whether providing basic training, type training, maintenance training, operating FSTDs, or even maintaining own aircraft. The system will be tailored depending on what activities are relevant, and this is actually stated in AMC 1 to OR.GEN.200(a)(7), 4.(a)(iii). We believe that it is not necessary to propose two sets of CMS AMC/guidance because it may lead to the conclusion that organisations providing training activities and operating FSTDs will need to maintain two independent compliance monitoring systems which is anathema. As far as we understand, if a company is an FSTD operator only (no training conducted under its approval) they will still require an ATO approval. Therefore the proposals for a compliance monitoring system need only be stated once. The proposals in this area would appear immature and need more work so that GM 1 to OR.ATO.300 is deleted but with relevant texts incorporated into AMC 1 to OR.GEN.200(a)(7), or a new GM 1 to OR.GEN.200(a)(7) developed.

The following are additional comments related to GM 1 to OR.ATO.300 with a reference back to AMC 1 to OR.GEN.200(a)(7).

1. Referring to ISO 9000 and its principles in relation to aviation regulation and compliance monitoring systems is dangerous. The ISO model proposes a 'total integrated system approach', of which an aviation CMS will be a part. To say that ISO does not cover all compliance areas required by aviation requirements is factually wrong!
2. Texts refer to the Safety Manager. AMC 1 to OR.GEN.200(a)(7) refers to 'a manager'.
3. Texts refer to audit and auditing. AMC 1 to OR.GEN.200(a)(7) refers to monitoring.
4. The Compliance Monitoring Assessment list is based on JAR-FSTD TGL9 and is very detailed. The compliance checklist related to AMC 1 to OR.GEN.200(a)(7) is the reverse and will result in duplication. For example, organisations only need to state ONCE who the accountable manager is and 'are they acceptable to the Authority' only once, not in more than one checklist.
5. References to Health and Safety – why only in GM 1 to OR.ATO.300 and not in AMC 1 to OR.GEN.200(a)(7).

The above comments point to general inconsistencies and non-standardisation in the CMS approach between the 2 proposals. Oxford Aviation Academy believes the foundation of these new proposals is good, but the area needs further harmonisation, amending and maturity. In this way EASA will be following their own 'holistic method' in the management system approach, and building on the CORA group's vision. We only need ONE quality (compliance) system in an ATO.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart ATO - Section 2 - Chapter 1 - GM 2 to OR.ATO.300 General**

p. 59-69

comment

21

comment by: *Alteon*

GM 2 to OR.ATO.300

FSTD checklist

*Alteon comment:*

Recommend to keep the regulatory reference column in the table to have a track of requirements met

comment

474

comment by: *FlightSafety International*

**Comment**

The last block on the page, "item d) major failures of a qualified device" has resulted in much confusion about what constitutes a major failure, and when, how, and who is to be notified. The EASA Experts Group could not come to consensus on this issue.

**Proposal**

Remove the requirement to report major failures of a qualified device.

**Impact to FlightSafety**

This requirement is vague and open to interpretation by ATO's and the various inspectors within the Authority. Until such time as a definition of a major failure and reporting procedure and time frame is agreed, this requirement should be removed. It imposes a requirement that is so variable as to be meaningless and impossible to implement.

comment 475

comment by: *FlightSafety International***Comment**

This section takes what have been "suggested metrics" when referred to in all other parts of the rule and makes them auditable requirements.

**Proposal**

Change the wording to "Do the quality measures track, for example:

- a) FSTD availability
- b) number of defects
- c) open defects
- d) defect closure rates
- e) training session quality ratings

**Impact to FlightSafety**

FSTD quality metrics should be meaningful information to the ATO. Each ATO needs to determine what data provides it the most useful information regarding the quality of it's FSTDs, thus the examples may fit most situations, whilst other data may be more appropriate for a different FSTD or situation.

comment 562

comment by: *UK CAA***Page No:**

61 of 83

**Paragraph No:** GM 2 to OR.ATO.300 (the CMS compliance checklist)

**Comment:**

This is the first of a series of UK CAA comments addressing the CMS table in GM 2. Each has been provided separately to make them easier to review and implement. A lack of reference in the boxes (the deletion of column 1 compared to the original JAA TGL) makes it more difficult to identify the text under review.

Last Box page 61 refers to management reviews and asks if they are carried out and how often: Propose to change the text to set criteria for management review at least quarterly.

**Justification:**

Based on UK CAA audit experience, quarterly seems to be the maximum period that can be tolerated to assure that management review can identify trends quickly enough to be corrected in a timely manner (as required from a CMS). The current text asks for a period but gives no guidance on what is acceptable.

**Proposed Text (if applicable):**

Propose replace the text of Last Box on Page 61 of GM 2 to OR.ATO.300 with: -

"Are management reviews of the CMS held at least quarterly"

comment

563

comment by: UK CAA

**Page No:**

62 and 63 of 83

**Paragraph No:** GM 2 to OR.ATO.300 (the CMS compliance checklist)**Comment:**

Propose to amend the text of bullet point (a) in the second box on this page to clearly allow compliance to be shown and to allow deletion of two items on page 63.

**Justification:**

The GM is designed to ensure the system is in place. There is no need therefore to ask for any results from a system that may not yet be in full effect. The proposed revision to page 62 defines the required process and the deletions of unnecessary items on page 63 eliminate duplication and also remove the need for the applicant to declare findings (which will form part of the ongoing audit activity of an established CMS).

**Proposed Text (if applicable):**

Amend bullet (a) in second box page 62 of GM 2 to OR.ATO.300 as follows: -

(a) Schedule and perform quality inspections and audits (including unscheduled audits as required).

Delete second, third and fourth checklist items on page 63 of GM 2 to OR.ATO.300.

comment

564

comment by: UK CAA

**Page No:**

63 and 64 of 83

**Paragraph No:** GM 2 to OR.ATO.300 (the CMS compliance checklist)**Comment:**

It is not relevant to ask if follow on audits have actually been carried out, whether audit non-compliances have been found, or if corrective actions implemented. The answers can only be yes or no and add no value to the responses. Delete the boxes on page 63 that ask those questions.

**Justification:**

This GM is designed to assure that a CMS is in place having the right procedures or controls. To look at the outcome is a function of the routine auditing. Whatever the answer, it gives no evidence as to the compliance with, or effectivity of, the system.

**Proposed Text (if applicable):**

Propose **deletion** of the following questions from the checklist on Page 63 and 64 of GM 2 to OR.ATO.300: -

- Have audit non-compliances been identified (page 63)
- Have corrective actions been identified and implemented. (Page 63)
- Have any follow on audits taken place to verify that corrective actions

were a) taken and b) effective (page 64 first box)

- Have corrective actions re-established compliance with the standards required by the Authority and any additional requirements defined by the ATO (page 64 item 2)

comment 565

comment by: UK CAA

**Page No:**

64 of 83

**Paragraph No:** GM 2 to OR.ATO.300 (the CMS compliance checklist)

**Comment:**

The audit checklist item covering document retention policy would be better placed on page 66 after the box talking about content of the CMS manual that relates to the retention policy.

**Justification:**

It is logical to identify the need for retention policy then ask what it consists of rather than to define it first and then subsequently ask if it is a policy.

**Proposed Text (if applicable):**

No change to text. Move retention policy checklist item on page 64 to be the last item (currently) on page 66.

comment 566

comment by: UK CAA

**Page No:**

66 of 83

**Paragraph No:** GM 2 to OR.ATO.300 (the CMS compliance checklist)

**Comment:**

Propose to move item 2 on page 66 to become the first item in section 5 (Compliance Measures) on page 68.

**Justification:**

This box asks if compliance measures and objectives have been established. The rest of section 5 follows logically from that question.

comment 733

comment by: Maarten

For flyingclubs with a FTSD this is just to complicated and to costly and in the long end doesn't contribute to safety. I thus won't go over the questions asked (like: is the safety manager acceptable? or; does the accountable manager have corporate authority?????) who seem to me complete useless in a certain way. Excuse me.

comment 30 comment by: Alteon

4  
Failure tabulation including categorisation of failures (ATA chapter by ATA chapter....

comment: Suggest delete as no relevant/useful all the times to FSTDs and put a further burden on operators to tabulate this

comment 205 comment by: DGAC FRANCE

GM3 to OR.ATO.300, : paragraph 4, item 5

In the dossier prepared by the FSTD operators to support the preliminary briefing which is a first step of a simulator evaluation, FSTD operators propose sometimes commercial data and rates which are much less relevant than the technical ones. This has to be clarified.

The following sentence is proposed:  
***“Technical reliability data..... ; technical availability rate.***

comment 476 comment by: FlightSafety International

**Comment**  
Item 7 in the list - Operational data: a list of the simulator users during the 12 last months should be provided with number of training hours;  
This item requires the operator to provide confidential business data.

**Proposal**  
Delete this requirement

**Impact to FlightSafety**  
The data requested is confidential business data and has absolutely no bearing on the ability of the device to meet technical standards for continued qualification. Further, discussions with NAA simulator inspectors has revealed that they have no interest in the data. Despite assurances of the confidentiality of such data, we have in the past been provided inadvertently with data for our competitors.

comment 477 comment by: FlightSafety International

**Comment**  
Item 8 on the list - Failure tabulation including categorisation of failures (ATA chapter by ATA chapter and Pareto diagram, ARINC classification) is meaningless in a FSTD environment

**Proposal**  
Change the item to state "Failure tabulation including categorisation of failures."

**Impact to FlightSafety**  
Categorisation of FSTD failures by ATA chapter or ARINC classification is

useless in the FSTD environment. For example, what would be categorised as a fuel system failure in an aircraft, if categorised as such in an FSTD, would be misleading at best, as there is only a simulated fuel system and a fault manifesting itself in the simulated system might be caused by software, interface devices, host computer memory problems, etc. The categorisation of faults needs to provide meaningful information to the FSTD operator and therefore needs to be categories that are specific to FSTDs, not aircraft.

568

comment by: UK CAA

**Page No:**

69 and 70 of 83

**Paragraph No:** GM 3 to OR.ATO.300 (the CMS compliance checklist)**Comment:**

Item 3 defines a dossier for initial evaluations that unnecessarily requires recent and planned modifications to be listed. A reference to additional white pages to take notes is irrelevant and unnecessary. Delete both items.

**Justification:**

This is not appropriate for an initial evaluation. An initial evaluation reviews a standard for the first time and therefore an FSTD being presented for an initial qualification cannot be considered as "modified". Planned future modifications are part of the normal CMS controls and irrelevant directly to the initial evaluation.

**Proposed Text (if applicable):**

Delete the following items from the dossier list for initial evaluations in paragraph 3 of GM 3 to ATO.300 (page 69)

- recent and planned modifications
- additional white pages for evaluation

Delete the following items from the dossier list for recurrent evals in paragraph 4 of GM 3 to ATO.300 (page 70).

-additional white pages for evaluation.

comment 734

comment by: Maarten

Well same remarks; would all this backoffice paper work contribute to safety if all this useless paperwork will decide an flyingclub not to buy a FTSD to enhance the safety of their pilots?

comment 2092

comment by: CAE

The requirements for the list of "simulator users" during a recurrent evaluation should be removed; data showing FSTD utilization is generally provided for such an evaluation and is adequate for the purpose.

70 of 83

**Paragraph No:** AMC OR.ATO.310 (a) Para 2

**Comment:**

Delete the text relating to users and differences list.

**Justification:**

These requirements are solely aimed at the ATO. Users of the device will be customer airlines with defined aircraft standards. The responsibility for defining the training needs in relation to the differences between aircraft and fleet are not for FSTD requirements, only the need to understand at any given time the configuration in place (i.e. configuration management as part of the CMS). There is a possible case to put such information in other areas of the IRs relating to defining training requirements.

**Proposed Text (if applicable):**

Amendment proposed is to delete the ~~struck-out~~ text as shown below in paragraph 2 of AMC to OR.ATO.310 (b). Remainder is unchanged except for reference to "simulator" changed to "FSTDs" for consistency in last line.

2. ~~Users of the device should always be required to produce a differences list for any~~

~~device they intend to use, and to identify how any differences should be covered in training. In order~~ To ensure each device is maintained in the appropriate configuration, the ATO operating a FSTD should have a system that ensures that all relevant Airworthiness Directives (ADs) are introduced on affected FSTDs.

70 of 83

**Paragraph No:** AMC OR.ATO.310 (a) Para 4 and 5**Comment:**

....STD should read ...FSTD (line 2 of paragraph 4)  
Add text to Paragraph 4 and delete paragraph 5

**Justification:**

Editorial change to terminology and deletion of inappropriate speculative text regarding the aircraft manufacturer and a reluctance to provide data in paragraph 5. The text can be streamlined by deleting paragraph 5 and adding a few words to paragraph 4.

**Proposed Text (if applicable):**

Changes to AMC OR.ATO.310 (a) Para 4 in *italic and underlined*

4. It may also be necessary to monitor ADs issued by states where users of the device have aircraft registered. In addition to ADs, the FSTD operator also needs to put in place processes that ensure all aircraft modifications are reviewed for any effect on training and testing. This should usually require a review of the aircraft manufacturers Service Bulletins and may require a

specific link to the aircraft manufacturer to be developed. *In practice, this link is often established through aircraft operators who use the device.*

Paragraph 5 is deleted.

comment 770 comment by: *European Regions Airline Association*

AMC to OR.ATO.310 4. states

"the STD operator also needs to put in place processes that ensure all aircraft modifications are reviewed for any effect on training and testing"

Whilst ERA can understand the need for embodiment of any modification required by an AD, it finds it difficult to understand how an ATO would monitor embodiment of those "discretionary" modifications as may be issued from time to time. Can the Agency clarify this requirement by providing examples of such modifications, together with suggested means that an ATO could use to monitor the issuance of the same.

comment 779 comment by: *European Regions Airline Association*

AMC to OR.ATO.310(a) 5. states "It may be necessary for this link to be created through the users of the device, as some aircraft manufacturers have been reluctant to share such information directly with ATOs operating FSTDs who are not also aircraft operators."

As has been reported by ERA in the past, EASA should enforce the requirement that OEMs provide all Instructions for Continued Airworthiness (ICA), and in ERA's opinion this comes under the category of ICA, to all entities that require it, be they ATOs, MROs or any third party organisation that has an effect on the airworthiness of a product or appliance.

**B. Draft Rules - IV. Draft Decision Part-OR - Subpart ATO - Section 2 - Chapter 1 - AMC to OR.ATO.310(b) Modifications**

p. 71

comment 572 comment by: *UK CAA*

**Page No:**  
71 of 83

**Paragrap No:** AMC OR.ATO.310 (b)

**Comment:**

1. The fact that it has proven difficult to define what is a major change is not considered appropriate regulatory text. Propose change to opening paragraph.
2. Additional bullets added ((e) and (f)) which have been extracted from OR.ATO.380 that also define major changes.
3. Format is erroneous. Points 2 through 5 are in fact, sub bullets of the opening paragraph.
4. Can delete the repeated reference to an item being major and some minor editorial changes are proposed.
5. Propose reword of para 4 for clarity.

**Justification:**

It is appropriate to say these are examples of what are considered major changes and list them. Reformatting is editorial comment. Additional bullets are for consistency and to avoid confusion by having definitions of major changes in 2 places (see UK CAA comment for OR.ATO.380 which deletes the bullet points e and f added here from that paragraph). Clarity is needed of the requirement for the ATO to have an acceptance process for all modifications.

**Proposed Text (if applicable):**

Proposed AMC to OR.ATO.310 (b) Modifications (Amendments in italic and underlined)

1. The following are examples of modifications that would be considered as major. This list is not exhaustive list and modifications need to be classified on a case by case basis: -

- a. Any change that affects the QTG
- b. Introduction of new standards of equipment such as FMGCs and updated aerodynamic data packages.
- c. Rehosting of the FSTD software
- d. Introduction of features that model new training scenarios; e.g., TCAS, EGPWS

e. Aircraft modifications which could affect the FSTD qualification

f. FSTD hardware or software modifications that could affect the handling qualities, performance or system representation

2. ATOs are reminded that the requirement is for the Authority to be notified of such changes.

3. This does not mean that the Authority will always wish to directly evaluate the change.

The Authority should be mindful of the potential burden placed on the ATO by a special evaluation and should always consider that burden when deciding if such an evaluation is necessary.

4. The ATO should have an internal acceptance process for modifications, to be used when implementing all modifications, even if the competent authority has made a decision to carry out an evaluation.

comment

724

comment by: ALSIM Simulateurs

Proposed text:

2. Any change that affects **FSTD validation tests results** should always be considered major.

Comment:

QTG is to be understood as the complete documentation (description + FSTD validation tests + validation data).

Thus, it would not be acceptable to consider syntax, semantic, documentation or new QTG capability (or characteristic) changes as major if those changes have no impact on the FSTD validation tests results.

p. 73-76

comment 8

comment by: *MVA*

Application for FSTD qualification: In Part A, the 2 text lines just below the table should be deleted, because the applicant seeks for a qualification in general. It is under the responsibility of the authority to provide grandfather rights or an interim qualification level.

comment 483

comment by: *Thales Training & Simulation*

**AMC to OR.ATO.350 Application for FSTD qualification PART A**

The template letter of application quotes " The QTG will be submitted by <date> and in any event not less than 30 days before the requested evaluation date unless otherwise agreed with the competent authority." The 30 days is in conflict with the 21 days quoted in AMC 1 to AR.ATO.200(a)(1) Initial evaluation procedure paragraph 2.

comment 484

comment by: *Thales Training & Simulation*

**AMC to OR.ATO.350 Application for FSTD qualification PART B**

The template letter refers to the MQTG. The MQTG does not exist until the FSTD has been qualified, so we should change MQTG to QTG.

comment 485

comment by: *Thales Training & Simulation*

**AMC to OR.ATO.350 Application for FSTD qualification PART C**

The structure of Part C implies that the Functions and Subjective tests can be completed not less than 7 days prior to initial evaluation. The rationale for this is the requirement for the pilot's signature and the comments:

" This team attest(s) that it conforms to the aeroplane/helicopter flight deck configuration of  
 ..... (Name of ATO operating the FSTD)..... (type of aeroplane/helicopter)  
 aeroplane/helicopter and that the simulated systems and subsystems function equivalently  
 to those in that aeroplane/helicopter. This pilot has also assessed the performance and the  
 flying qualities of the FSTD and finds that it represents the designated aeroplane."

This is in conflict with AMC 1 to AR.ATO.200(a)(1) Initial evaluation procedure paragraph 2 which requires the QTG to be submitted 21 days prior to the evaluation. This statement quotes the QTG which implies the complete QTG consisting of Objective and Subjective test results.

p. 76-77

comment

478

comment by: *FlightSafety International***Comment**

Section 1.2 states the guidance provided is only applicable to FFS aeroplane qualifications, then goes on to contradict itself by saying it is equally applicable to FTD aeroplane, FFS helicopter and FTD helicopter.

**Proposal**

Change the requirement to state "This guidance is applicable to FFS aeroplane, FTD aeroplane, FFS helicopter and FTD helicopter qualifications." If it is not the intent that the guidance be applicable to all these devices, then clarify to which device types it is applicable, or delete the statement.

**Impact to FlightSafety**

This section is confusing and self-contradictory and as it currently reads, is applicable to all the devices mentioned. If it is applicable to all, it should be so stated. If not, it should be deleted.

comment

479

comment by: *FlightSafety International***Comment**

In Section 3.4 the word "excessive" in regards to the acceptable number of footprint tests is undefined.

**Proposal**

Change the statement to define an acceptable number of footprint tests or

percentage of the total number of tests that would be considered acceptable.

**Impact to FlightSafety**

The use of imprecise, undefined words such as "excessive" opens the door for subjective interpretation which is subject to change based on the whims of the inspector assigned to evaluate the tests. Trying to satisfy the subjective opinions of a diverse group of inspectors presents a difficult task to operators, especially when the goalposts change depending upon the various inspector's interpretations of "excessive."

comment 480

comment by: *FlightSafety International*

**Comment**

The words "well in advance" used in section 3.7 are entirely subjective.

**Proposal**

Change the requirement to state "The competent authority should be consulted at least 30 days in advance of the QTG submission if footprint tests are to be used

**Impact to FlightSafety**

Putting a deadline on the notification to the authority will remove the ambiguity of the requirement.

If the intention of EASA is to introduce a class 2 medical for Cabin Crew then there will never be enough AMEs to conduct all the required medical checks. This will lead to huge cost and operational disruptions for no safety benefit and it is not in line with the intent of the EU legislator which had not intention to alter the medical fitness requirements of EU-Ops which allows an assessment instead of an examination as proposed by EASA.

AMC to OR.AeMC.210 para 1., page 83

Smaller States and thus smaller AeMC will have the problem to find AME, which could meet the condition of 500 1st class MCs issued. We therefore recommend to reduce this number or complete requirements, which will replace the experience (e.g., completion of the course in another AeMC ...).

comment by: *Civil Aviation Authority of Norway*

Comment to section 2, subsection (e):

The requirement "anomaloscopy" is too limiting. Other methods of colour vision testing are in widespread use and compatible with "Part Medical". The specified equipment should be for advanced colour vision testing. We therefore propose to change (2)(e) to "advanced colour vision testing".

Comment to section 6, subsection (a):

An AeMC should not be required to have a clinical laboratory as part of the AeMC. It is sufficient for an AeMC to have a contract with a provider of biochemistry services. We therefore propose to change the requirement to having "established a contract with a provider of biochemistry services".

Comment to section 6, subsection (b):

Ultrasound should not be mandatory equipment of an AeMC. Ultrasound of the abdomen should be performed by trained specialists in regular clinical practice. In cases where such an examination is necessary, the applicant should be referred to a specialist. We therefore propose to delete the requirement.

comment

419

comment by: *CMO/AMC and President of Danish Aviation & Marine Medical Association*

In addition to pure-tone audiometry also speech audiometry is necessary in evaluating a safe hearing (otherwise only hearing ability of flight alarms are tested!). Evaluation of the ability to safe communication is a must in aviation.

Also you may find it practical to have AeMC with the ability to make "Flight Deck Test". If so, standards for these tests must be defined in details.

How is "clinical assessment of vestibular system" defined? Like in cardiology and other areas specified requirements is needed.

comment

422

comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*

Comment:

Ultrasound should be available locally on indication and on short notice, but it should not be a required piece of equipment. AeMCs should be equipped with equipment for aeromedical exams, all specialized equipment should be available on short notice locally, but not necessarily within the AeMC. Reason: The quality of specialized examination methods is better, if performed by specialists doing huge numbers of such exams, which is not the case for

ultrasound in a daily routine of an AeMC.

Poposal:

Delete 6 b Ultrasound of the abdomen.

comment by: *FAA*

The following is listed as required medical equipment for U.S. AME's

See

[http://www.faa.gov/about/office\\_org/headquarters\\_offices/avs/offices/aam/am\\_e/guide/app\\_process/general/equipment/](http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/aam/am_e/guide/app_process/general/equipment/)

For the conduct of the medical examination, Examiner's shall have adequate facilities for performing the required examinations and possess or agree to obtain the following equipment prior to conducting any FAA examinations.

History or current findings may indicate a need for special evaluations. Examiners shall certify at the time of designation, re-designation, or upon request that they possess (and maintain as necessary) the equipment specified.

1. **Standard Snellen Test.** Types for visual acuity (both near and distant) and appropriate eye lane. FAA Form 8500-1, Near Vision Acuity Test Card may be used for near and intermediate vision testing. Metal, opaque plastic, or cardboard occluder.
2. **Eye Muscle Test-Light.** May be a spot of light 0.5cm in diameter, a regular muscle-test light, or an ophthalmoscope.
3. **Maddox Rod.** May be hand type.
4. **Horizontal Prism Bar.** Risley or hand prism are acceptable alternatives.
5. **Other vision test equipment** that is acceptable as a replacement for 1 through 4 above include any commercially available visual acuities and heterophoria testing devices.
6. **Color Vision Test Apparatus.** Pseudoisochromatic plates, (American Optical Company (AOC), 1965 edition; AOC-HRR, 2nd edition); Dvorine, 2nd edition; Ishihara, Concise 14 -, 24 -, or 38-plate editions; or Richmond (1983 edition, 15-plates). Acceptable substitutes are: Farnsworth Lantern; OPTEC 900 Color Vision Test; Keystone Orthoscope; Keystone Telebinocular; LKC Technologies, Inc., Apt-5 Color Vision Tester; OPTEC 2000 Vision Tester (Models 2000 PM, 2000 PAME, 2000 PI); OPTEC 2500; Titmus Vision Tester; Titmus II Vision Tester (Model Nos. TII and TIIS); Titmus 2 Vision Tester (Models T2A and T2S); Titmus i400.
7. **A Wall Target** consisting of a 50-inch square surface with a matte finish (may be black felt or dull finish paper) and a 2-mm white test object (may be a pin) in a suitable handle of the same color as the background. Note: this is not necessary if an AME chooses the acceptable option of performing field of vision testing by direct confrontation.
8. **Standard physician diagnostic instruments and aids** including those necessary to perform urine testing for albumin and glucose.
9. **Electrocardiographic equipment.** Senior Examiners must have access to digital electrocardiographic equipment with electronic transmission capability.
10. **Audiometric equipment.** All Examiners must have access to audiometric equipment or a capability of referring applicants to other medical facilities for audiometric testing.

comment 343 comment by: *French SAMU using helicopters for medical transport*

When considering introduction of helicopter specific requirements may I mention that the HTSG had agreed on a FTL scheme which was frozen by the JAA at that time waiting for the aeroplane scheme to be completed.

In addition when considering helicopter operation there is a need to consider some specific adjustments when dealing with HEMS operations. HEMS operations need long Duty periods at a hospital associated with limited Flight Duty periods or flight time. In some states pilots prefer a 14 day working period as they have the family leaving in another part of the country

comment 468 comment by: *CAA-NL*

AtoA (GA)

General comment CAA-NL:

The CAA-NL proposes to EASA to define different types of operations and allow related requirements and compliance demonstrations proportionate to the complexity of the operation, such as A to A flights (sightseeing), aerial work and commercial OPS with non complex motor powered aircraft.

EASA NPA 2009 (Entire NPA)

**Comment:**

EASA refers to a European Commission Communication on General Aviation and Business Aviation as a justification to introduce less stringent safety rules for business aviation.

With regard to business aviation involving complex motor-powered aircraft, the AEA strongly disagrees with this flawed justification. EASA should stick to its safety mandate. Non-commercial operators of complex motor-powered aircraft (transporting passengers) and that fly in the same airspace as commercial operators should be subject to IDENTICAL safety rules as commercial operators since the safety risks are identical. EASA's proposal to have lower safety rules is not only putting flight safety of non-commercial operators at risk, it is also putting the flight safety of commercial operators and their passengers at risk due to the fact that they share the same airspace (e.g this NPA could lead to an increased amount of mid-air collisions or runway incursions). This is completely unacceptable to AEA and it will make EASA liable in case of accidents involving non-commercial operators of complex motor-powered aircraft.

In this context, the AEA notes that there is already a disproportionate high number of accidents involving non-commercial operators using complex motor-powered aircraft (i.e. UK-CAA report on accidents involving business operators).

Finally, the AEA would like to point out that some type of non-commercial operations (transporting passengers) are competing with commercial operations. This NPA which opens the way for non-commercial operators to compete with commercial operators based on lower safety standards is therefore also not providing for a level playing field and is therefore against the basic principles of the common EU market.

**Proposal:**

Realign the implementing rules for non-commercial operators of complex motor-powered aircraft with those of commercial operators of complex motor-powered aircraft

comment by: *AOPA-Sweden*

Article 8.3, Basic Regulation opens for some alleviation for non-commercial operators of complex aircraft. AOPA-S inquires such a relief for owner of VLJs and this part should go through another revision before a new consultation.

It should not be a requirement of an owner/pilot of a Piper PA-47 to have an organization as proposed in this NPA 2009-2c. The result will only be that the new modern aircraft for GA will NOT enter the European register.

AOPA-S can not understand why a heavier amphibian Cessna C-206 shall be less complex than a Diamond D-jet.

comment by: *Axel Ockelmann + Manfred Poggensee Commercial Balloon Operators Germany*

There is not any clear definition in the basic regulation or the implementing rules, that says commercial ballooning is Commercial Air Transport. ICAO is defining Commercial Air Transport as international Transport. From our point of view commercial ballooning is a commercial operations other than CAT, which means a new category, because it is only partwise "aerial work";but not commercial air transport.

The position of EASA-proposals did not consequently follow the rules ,if commercial ballooning is commercial air transport, why they are not defining a special category of air transport for ballooning. Is it too complicated? Following EASA philosophie "make the rules proportional to the scale and scope and risk of the operation".

EASA has to find lower requirements for the operation of balloons. Balloons are the simplest aircrafts ever and the pilots are doing pleasure-flights normally inside the dimension of 10-20 miles with a flighttime of 1-2 hours. Balloonpilots are not flying for up to 10-14 hours, or at night, or over timezones. So this commercial operation is rather different to the other commercial air transports.

For the technical requirements we can see the EASA is finding differentiated requirements, why not also following that way for Operations? Following that reduced way, there must be also differentiated requirements for Age, Flight- and Resttime

comment

1824

comment by: *Rory OCONOR*

I fully support the comments of the British Gliding Association.

Your response is disproportionate and possibly will decrease rather than increase the flight safety of glider pilots.

For safe gliding operations, pilots need maximum flexibility and not excessive constraints such as distance from cloud.

Cloud flying in gliders is safe and is not the same as Aeroplane IFR flight in nature. It has different requirements.

(Cloud flying in any craft, glider or not, next to mountains is not safe).

Please listen to the experts before making poor decisions.

Rory

comment 1864 comment by: *Light Aircraft Association of the Czech Republic*

This is the answer of the Light Aircraft Association of the Czech Republic. During the work of MDM032 following conclusion was agreed and passed to the OPS WG:

- 1. For aircraft below 2000 kg MTOM the Essential Requirements should be applied directly except for 3 additional Implementing Rules (COM/NAV equipment, safety equipment, fuel reserves)
  - 2. For aircraft above 2000 kg MTOM OPS 0 should be applied see MDM032-DOC082 MoM 2007-04-17-19 Final Version.doc
- Why this agreement was rejected?

Proposal: Just follow the recommendation of the MDM032 group.

EASA NPA 2009-02 (Entire NPA)

**Comment:**

There is no consistency on the criteria used by EASA for putting certain requirements into the hard-law (IR) and others in soft-law (AMC) or guidance material. The result is that some minor and non-safety related issues (f.e. uniform of the cabin crew) have been put in hard-law, whereas important safety requirements (f.e. definition of adequate aerodrome and Requirements for Rescue and Fire Fighting) have been put in guidance material only. This NPA could therefore lead to reduced flight safety which is unacceptable.

This NPA can therefore not be accepted by KLM.

**Proposal:**

Reconsider the entire NPA and realign it with EU-OPS. Introduce clear (safety) criteria as basis for decision to put certain requirements into IR, AMC or Guidance Material

EASA NPA 2009 (Entire NPA)

**Comment:**

EASA refers to a European Commission Communication on General Aviation and Business Aviation as a justification to introduce less stringent safety rules for business aviation.

With regard to business aviation involving complex motor-powered aircraft, the AEA strongly disagrees with this flawed justification. EASA should stick to its safety mandate. Non-commercial operators of complex motor-powered aircraft

(transporting passengers) and that fly in the same airspace as commercial operators should be subject to IDENTICAL safety rules as commercial operators since the safety risks are identical. EASA's proposal to have lower safety rules is not only putting flight safety of non-commercial operators at risk, it is also putting the flight safety of commercial operators and their passengers at risk due to the fact that they share the same airspace (e.g this NPA could lead to an increased amount of mid-air collisions or runway incursions). This is completely unacceptable to AEA and it will make EASA liable in case of accidents involving non-commercial operators of complex motor-powered aircraft.

In this context, the AEA notes that there is already a disproportionate high number of accidents involving non-commercial operators using complex motor-powered aircraft (i.e. UK-CAA report on accidents involving business operators).

Finally, the AEA would like to point out that some type of non-commercial operations (transporting passengers) are competing with commercial operations. This NPA which opens the way for non-commercial operators to compete with commercial operators based on lower safety standards is therefore also not providing for a level playing field and is therefore against the basic principles of the common EU market.

**Proposal:**

Realign the implementing rules for non-commercial operators of complex motor-powered aircraft with those of commercial operators of complex motor-powered aircraft

EASA continue to make extensive and complex NPA proposals which go beyond the JARs they plan to replace and they not in line with the current EU-OPS requirements. It is our understanding that the EU Legislator mandated EASA to take the existing JARs and amend them into community law. However, the major changes being proposed by this NPA and other NPAs cannot be justified even on grounds of safety.

We would urge EASA to revisit it NPA proposals and align with EU-OPS and JARS.

Due to the complexity and size of this NPA, time constraints AAPA is unable to fully review the document in order to identify questionable proposals and mistakes introduced by EASA.

**0 General Comments:**

We would like to take advantage of this NPA 2009-02, to confirm previous comments concerning NPA 2008-22, that is to say: the new structure is hard to understand, the reading is complex and an overall view is missing. In France, despite many inforamory meetings, stakeholders have had great difficulty in understanding these propositions. This is especially true for the small organizations which experience problems in understanding the measures which are applicable to them. It is indispensable that the simplified measures should be very explicit and that a dedicated consultation should take place.

The new regulatory structure does not seem to be well adapted; at least it appears, in our opinion, to be very far from being mature and we confirm our preference for to an activity-based approach.

We consider this NPA as an advanced NPA

It would have been appropriate to keep the old widespread JAR's structure with

JAR OPS 0 (Gen), 1 (Plane), 2 (Corporate), 3 (helicopter) and 4 (aerial work), completed by the modern Safety Management Systems concepts and also to create, as necessary, new ones concerning balloons and other aircrafts (such as UAV, sailplanes...).

A great deal of work needs to be done on the definitions linked to "commercial"

The proposed requirements must not prevent a member State from carrying out, apart from the SAFA programmes and methods, ground inspections of foreign aircraft on its territory, as specified by the directive 2004/36 item 2 article 1.

The BR 216/2008 5 and 7 recitals allow the member States to deal directly with certain local based operations as local flights, this possibility must be used

The transition measures must be extensive and gradual in scope according to the areas concerned.

### **1 Structure:**

- Here are some examples which show the difficulties in reading those proposals, for the industry as for the Authorities, and which demonstrate the need for a return to a more classical activity-based regulation.
- Equipment: paragraphs are very long, divided by aircraft types, even mixed with activities (airplane & helicopter vs carriage of parachutists), and too complicated to understand which kind of seat belt/harness is required: OPS.GEN.405 "Equipment for all aircraft", items (a) (3) and (a) (4), then OPS.GEN.400 "Seat belts and harnesses" which should contain previous items, but we have to reach the third line to understand that it's only applicable to commercial air transport.
- A lot of time is uselessly spent trying to understand where the relevant information is to be found, and what is applicable to whom.
- The Agency's holistic approach leads for the reader and the future user, to a far less holistic vision of the applicable rules.
- In spite of the Agency's promise (§24 NPA 2009-02a Explanatory Note) to conserve the whole EU-OPS & JAR-OPS 3 dispositions', many differences crop up throughout the proposition, which leads the reader to doubt the rest of the dispositions, and these differences require a careful analysis, which has not been successfully completed yet because of the lack of time.
  - For example: the disappearance of the "commander" (we need to know who is legally responsible on board, during a flight), and the emergence of the "pilot in command" (PIC); moreover, the PIC can delegate only to another PIC, including above the FL 200, which was not the case in the EU-OPS. This new curtailment appears in AMC, which is somewhat out of place/..

All of this leads to, a very partial study of the dispositions, and the necessity to convert this NPA into an A-NPA. The Agency, after studying the comments/ , shall publish a complete NPA which should encompass the 3 NPAs 2008-17, 2008-22, 2009-02.

### **2 Definitions:**

Serious work must be undertaken on the definitions:

*(a) The substance:*

CAT: a definition is needed consistent with other European rules. On the one hand, the NPA 2009-02 (point 53, pages 34/123) refers for CAT to the ICAO's annex 6 definition of "commercial air transport operation" which is not consistent with the "commercial operation" definition contained in the basic regulation article 3)i). On the other hand, the EC 1008/2008, chapter II, article 3)3) b) excludes local flights from the obligation to hold an operating license. We propose to define the "commercial air transport" concept by using the BR's (article 3i)) definition of "commercial" and the concept of "air transport" as transportation from A to B, with A different from B, as the EC 1008/2008 suggests.

AMC/CS: Following the Agency's seminar organized on June 23<sup>rd</sup>, and the large number of explanations asked for, it seems to be necessary to introduce those definitions in the AR.

"Organization": this term shall be defined. Is it an organism or simply the fact of being organized?

(b) The form:

There is a discrepancy with other European Rules (cf previous), which could lead to a legal uncertainty.

Lack of definition: in this case, either we take the ICAO's definitions or we propose one. For example, "flight crew is defined nowhere, whereas "cabin crew" is only defined in Part CC and "for the purpose of this part"; so, we do not know which definition should be taken into account for Part OPS. Finally, we have no definition of the "technical cabin crew".

We have found definitions at many different regulation levels, sometimes in IR, AMC, or GM. For example: the list of definitions begins in the IR section, and suddenly ends, to be continued in the GM section.

Sometimes, a definition is given in the AMC section whereas it is used in IRs.

Generally speaking, definitions should be gathered in only one IR "Part Definition" (except, if it were used in a single paragraph). This way, definitions can be used in other parts, allowing for more homogeneity.

### **3 Security**

Some dispositions proposed by the EASA do not seem to be compliant with other Community Regulations already in force about security. The Agency should verify compliance.

### **4 Part CC (IR personnel annex V ) and Medical CC (IR personnel annex II)**

We would like to give full support to the Agency's proposition on both CC's certification and medical requirements.

### **5 Ramp inspections (IR AR section IV)**

The exact scope concerning "ramp inspection" should be clarified.

We understand that the dispositions introduced for ramp inspections are taken in application of the article 10.2 of BR 216/2008 which says that a Member State must, on his territory, conduct ramp inspections on aircraft the general supervision of which he doesn't have the responsibility of, and that these inspections must be conducted by following agency-specified methods, and this would therefore replace the scope of directive 2004/36.

We haven't found any basic regulatory specification in BR 216/2008 to justify

the application of Community methods to ramp inspections conducted by a Member State on aircrafts used by operators that it oversees. All references to inspections on all but foreign aircraft must be removed from the agency's proposition in terms of Ramp Inspections.

In addition, the proposed dispositions must not prevent a Member State from conducting, without following the SAFA program (and its methods), ramp inspections of foreign aircraft, as described in paragraph 2 of article 1 of directive 2004/36.

## **6. Flexibility (use of paragraphs 8.2 and 8.3 of BR216) and subsidiarity**

Articles 8.2 and 8.3 make provision for certification of commercial operations and declaration of non commercial operations of complex aircraft "unless otherwise determined in the implementing rules". EASA hasn't made use of this possibility in its propositions whereas we see at least two points where such dispositions could have been made use of.

*(a) Fractional ownership and Shared ownership:* these two concepts should be better defined. We understand that the agency's propositions do not make provision for a control of air operations conducted under these concepts (except declaration in the case of complex aircraft). We wish that specific dispositions be made.

Regarding fractional ownership, CEAC recommended, a few years ago, that the future European regulation take its inspiration from the American Part 91-K, that imposes conditions on the number of aircraft in the fleet and on the owners, and organises contractual dispositions between the administrator and the co-owners, and between the different co-owners.

*(b) Aerial work:* as a first step, it seems reasonable to certify only those aerial work activities that are considered as generating the most risk (everything that involves low altitudes: crop-spraying, line surveillance), the rest could be subjected only to a declaration.

*(c)* Furthermore, certain activities that are restricted to a very small geographical area, should remain in the domain of subsidiarity, taking into account the absence of any competitive aspect and technical requirements linked to a European recognition need.: such as local flights (from A to A, with both time and range limited), and initiation flights. This proposition follows the BR 216/2008's recital n°5, which was initially drawn up to introduce annex 2.

## **7 FTL**

We have found only 4 of the 5 points specified in the article 8.4 of the CR 3922/91 (OPS 1.1105 point 6, OPS 1.1110 points 1.3 and 1.4.1, OPS 1.1115, and OPS 1.1125 point 2.1); the "reduced rest arrangement" is missing.

From our point of view, it seems clear that both the numeric values and the five points specified in article 8.4 should be in the IRs' section. CSs should allow the application of those 5 points. The Agency itself reminds, in the NPA 2009-02-a, that the sub-part Q's substantive provisions shall be included in IR, according to article 22. Moreover, as specified in the NPA 2009-02-a, page 51 paragraph 41, numeric values are considered as "substantive provisions".

Last but not least, we wish, according to the Agency's statements, national provisions, implemented in compliance with article 8.4, to be taken into account and acceptable for further regulation.

## **8 Transition measures**

The propositions contained in the NPA 2009-02 modify requirements significantly concerning certain kinds of stakeholders; which is the case for aerial work (COM non CAT), that are today, in most member states, under a declarative system (which is changing for a certified system).

Those operators are either badly or insufficiently organised and represented and they are faced with numerous problems to read and comment on those texts (not translated into French). Under those conditions, measures to facilitate an acceptable transition must be scheduled (by giving time and the appropriate means to understanding).

According to the BR 216/2008, the IR must be published before April 2012, but the actual putting into practice may occur later

Taking into account:

- The new rules' structure
- Modifications in existing regulations (EU-OPS/JAR OPS 3)
- A wider scope
- The crisis that airlines are facing

The adopted transition measures should be as long as possible and scheduled depending on the areas. We consider that the requirements for the non commercial air transport activities (areas generally not so strongly regulated), should be delayed.

A two-year period after the 8<sup>th</sup> April 2012 seems reasonable before applying the requirements concerning commercial air transport, and it is our considered opinion that a schedule should be drawn up on an individual basis for all the other activities.

### **9. Code share**

The IR-OPS toughen the conditions by which European airlines will be able to conclude code share agreements with non-European airlines because the candidate must prove (by initial and regular in situ audits) to its Authority that the airline approached for the code share agreement observes the ER (the foreign airline will furthermore have to be TCO authorized) and certain dispositions of IR OPS. The medical fitness required of cabin crew could for example prevent the agreement.

French airlines are worried about the possible repercussions of these propositions on code share agreements that are already in force.

While we understand the legitimate concern that leads to clarifying the conditions associated with code sharing, we consider it not appropriate to prevent such operations with a major airline that is supervised by a country that is recognized in terms of safety, on the ground that the non-European country does not conform to such and such disposition of IR OPS.

### **10. Work priority**

If the process cannot be finished within the given time, France proposes that the following domains be treated in the following order from highest to lowest priority:

1. CAT airplane and CAT helicopter
2. Corporate aviation: complex aircraft and fractional ownership
3. other types of aerial work (airplane & helicopter)
4. all other domains

comment

3464

comment by: *BMVBS (MoT Germany)*

The Federal Republic of Germany cannot accept the text of the entire NPA 02-2009 as proposed. The text does not fulfil the requirements set out by the Regulation No. (EC) No 216/2008 of the European Parliament and of the Council of 20 February 2008.

**First Reason: Endangering a high uniform level of civil aviation safety in Europe**

In Article 1 of this Basic Regulation it is stated:

"1. The principal objective of this Regulation is to establish and maintain a high uniform level of civil aviation safety in Europe."

The Agency proposed in its draft an approach of so called "performance-based rulemaking" in order to provide a higher level of flexibility to fulfill the technical requirements of the implementing rules and to incorporate technical innovations more easily. While Germany supports the objective of this approach we have strong concerns that the way it is implemented will have negative consequences on the level-of-safety of European aviation.

The Agency proposes to express safety objectives by means of indefinite terms at the level of binding implementing rules. These indefinite legal terms are substantiated by "Acceptable Means of Compliance" (AMC) which are not legally binding. According to German administrative law, the NAA can only enforce binding law. The Agency or the NAA can publish AMCs and require the applicants to fulfill them as prerequisite e. g. for a certificate. If the applicant does not fulfill the requirements of the AMC the NAA would not issue the certificate. If the applicant does not accept the decision of the NAA he or she might go to court. In this case, the judge of the administrative court will decide whether the requirements set out by the written and binding law are fulfilled by the applicant or not. If the binding law contains indefinite legal terms the judge has a high level of freedom for his or her decision.

The consequence might be that a level-of-safety which is lower than that incorporated within the AMC is acceptable to the court. Moreover, courts of different member states might come to different decisions. The result would be a level-of-safety which might be lower than today and which is certainly not uniformly applied. Therefore, the drafts of the NPA do not conform to the Basic Regulation.

In order to establish and maintain a high uniform level of civil aviation safety across Europe it is necessary to provide clear and unambiguous rules which conform to the standards of legal certainty. If a higher level of flexibility for the means to fulfill the binding law is desired the concept of performance-based rulemaking as proposed by ICAO might be used. In order not to compromise the level-of-safety, it is essential that performance objectives within the rules are clearly determined by either quantitative or qualitative terms. An indefinite legal term is too generic and is certainly not appropriate for this purpose.

The approach of performance-based rulemaking should be applied with care since even ICAO has identified risks for the conversion of prescriptive rules into performance-based ones. Except for the State Safety Program and the Safety Management Systems concept ICAO has not yet incorporated the performance-based approach into the standards. Therefore, Europe would be one of the pioneers when establishing of performance-based rules and must ensure that

the States can still fulfill their obligation to comply with ICAO standards.

### **Second Reason: Unnecessary Deviation from EU-OPS**

In Article 8 Paragraph 4 and 6 as well as in Article 22 Paragraph 2 (a) it is clearly stated that at least for the application area of commercial transport in aeroplanes the implementing measures of the Commission shall initially be based on the common technical requirements and administrative procedures specified in Annex III (EU-OPS) to Regulation (EEC) No 3922/91.

The new structure of the proposed rule text does not, by status and content, mirror the current operational rules, i.e. in EU-OPS and JAR-OPS 3. In case of an enforcement of the proposed rule, AMC and guidance material, the industry as well as NAAs would need to change well established checking survey plans, procedures, manuals and records. We do not see any justification for introducing a new rule structure, especially with the view of enhancing safety. In so far, the RIA to the NPA does not really justify the step taken by EASA to entirely change the structure of future European requirements. It is not understandable why EASA did not consider these inputs, as similar objections were raised by other NAA's as well as by industry's representatives. Initially, EASA argued with legal implications a duplication of rules (such as in OPS 1 and 3) would impose. Hence, so EASA, i.e. only one requirement for an AOC can be enforced, leading to a disruption of the well established EU-OPS/JAR-OPS 1 and 3 requirements. The same applies to the proposed licensing requirements. Legal experts throughout Europe very much questioned the legal position expressed by EASA, and meanwhile, it is very clear that similar requirements in different EU – Regulations are acceptable and, in fact, existent. For example, almost identical Authority requirements apply for EU Regulations 1702/2003 and 2042/2003.

Germany, therefore, proposes not to implement the proposed rule structure for OPS, but to develop dedicated requirements for every single air operations application, such as JAR-OPS 1, 3 and draft JAR-OPS 2 and 4. We have to accept duplications in order to provide a separate book for each separate application. So, we also have to accept that in case of the need for changing similar requirements by an NPA, it is the task of EASA to steer the associated rule making work as well as to maintain and update the material as required.

Moreover, there is neither the obligation nor the mandate for EASA within the Basic Regulation to promulgate higher requirements for cabin crew attestations or flight time limitation rules than the ones which are already included in EU-OPS.

### **The way forward:**

The quality of a regulatory amendment is highly dependent on the level of maturity of the draft as published for consultation. Ideally, the consultation process should help the Agency to perform mainly a fine tuning to optimize the final rule. The Notice of Proposed Amendment (NPA) No. 2009-02, however, is far from mature. It contains major conceptual mistakes. In consultation with the German aviation industry it has been assessed that the introduction of the proposed amendment would not only undermine aviation safety due to unclear or incomplete requirements, it would also erode the competitiveness of the European aviation industry at large.

The situation is considered extremely startling and the German government is

increasingly concerned about these developments. We do not consider the proposed amendment suitable to support a process that would converge towards a consensus in the Committee phase of the regulatory procedure with scrutiny, and therefore would strongly advise EASA to re-consider the NPA as an “advanced” NPA that would be followed by a second round of consultation once a consensus on the conceptual approach has been reached. It is already clear at this stage, that this NPA will have to undergo substantial modification to an extent that would require a second round of consultation, if the principle of “better regulation” was to be respected.

In our view the proposed amendment not only fails to achieve the objective to base the implementing rules as much as possible on existing JAA material, it also fails to safeguard the highly important regulatory continuity, thereby creating incalculable risks for affected stakeholders potentially jeopardizing their very existence.

Against this background the Agency would be well advised to apply a sound change management strategy keeping the risks induced by the regulatory changes for the European aviation industry in mind.

Due to the extent and complexity of this rulemaking proposal the deadline of 31<sup>st</sup> July 2009 was still insufficient to coordinate a complete response by the German MOT. The German Ministry of Transport therefore generally endorses and supports the comments brought forward by the Luftfahrt-Bundesamt and German aviation stakeholders whose comments could not be collated and reproduced in due time.

comment by: *Baden-Württembergischer Luftfahrtverband*

## **Introduction**

The Baden-Württembergischer Luftfahrtverband (BWLV) is the association of about 200 aviation clubs in the state of Baden Württemberg in the south west of Germany. About 160 of these clubs instruct on aeroplanes, sailplanes, micro lights, balloons and parachutes.

By far the most activity in general aviation is happening in these clubs. Here pilots are under close observation and exchange lots of information. Aircraft belong to all members and are often not insured against damage or even complete loss. This leads to quite rigid supervision between the members. This setup contributes largely to the safety consciousness in general aviation.

It is important to maintain this infrastructure and make sure it is supported by the regulations. This importance is also emphasized in the „*An Agenda for Sustainable Future in General and Business Aviation* COM(2007) 869”.

## **General Comments**

### **1. commercial operations**

#### **Issue with current wording**

According to the definition in Article 3 (i) of the basic regulation any operation with remuneration is a commercial operation. Already in previous comments it has been discussed that many activities of non commercial organizations or private persons can not be considered commercial although payments are accepted but only for cost sharing. The Regulations for commercial operations in this NPA must not be applicable for these activities. Burdening clubs with the

regulations for commercial operations would severely endanger their role in providing affordable flying for interested persons.

### **Our proposal**

Either state that Article 3 (i) of the basic regulation does not apply to cases where only costs are shared or compensated and there is no intention to make profit or introduce a class of "commercial" operations on non complex aircraft and state that this class is excluded from the regulations defined for commercial operations.

### **Rationale**

Several activities of private or club operations can not be considered as commercial operations although a certain amount of compensation is paid to share costs. For example clubs in Germany have to be open to a certain extent to the communities where they operate and offer passenger rides. This is necessary for the acceptance and integration of the clubs and their airports by the public. The clubs though can not afford to offer passenger rides for free but must ask for cost sharing or compensation. This should though not lead to the situation that regulations for commercial operations proposed in this NPA need to be followed.

comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

The NPA 2009-02 introduces many changes in comparison with EU-OPS that are not justified regarding safety.

The comments hereafter SHALL BE considered as :

A identification of some of the major issues FNAM asks EASA to discuss with third-parties before any publication of the proposed regulation, consistently with, and prior to, the above common and constructive approach.

In consequence, the comments hereafter SHALL NOT BE considered :

As a recognition of the third-parties consultation process carried out by EASA

As an acceptance or an acknowledgement of the proposed regulation, as a whole or of any part of it

As complete : the fact some articles refer to not yet-published (or even not yet-established) pieces of regulation or are not self-consistent prevented FNAM to understand and comment them

As exhaustive : the fact some articles (or any part of them) are not commented does not mean FNAM has (or may have) comments about them, neither FNAM accepts or acknowledges them

All the following comments are thus limited to our understanding of the effectively published proposed regulation, not withstanding their consistency with any other pieces of regulation, including with the Basic Regulation 216/2008, giving mandate from the Commission and Parliament to EASA.

comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

Small organizations should know how and in which way they will benefit of less complicated requirements. This must be more explicit and a part should be dedicated to this type of operators as when reading the whole legislation, it is really confusing to understand what they are expected to do.

comment

3523

comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

Publishing Part TCO (Third Country Operators) after the end of the consultation period of NPA 2009-02 (Part-OPS) does not allow stakeholders to fully comment this NPA. This implies that comments induced by this new publication may interfere with comments from NPA 2009-02 (part OPS). As a result , EASA should make a commitment to stakeholders to keep on taking into account OPS comments during the period of consultation of Part-TCO as there are many interconnections between those legislations.

***Draft Opinion and Decision Part -OR***  
The NPA's include a lot of suggested complex procedures and reporting routines that will not create any added value to flight safety or to the reduction of cost. Further, for several issues, we do not see any clear legal basis in the Basic Regulation for certain requirement.  
  
As examples:  
- Besides flight inspections, there is a requirement to perform ramp inspections of national operators. What do ramp inspections cover that is not already covered by the flight inspection? What is the added value in this requirement?  
- The requirement for approving wet lease from 3. country operators is far beyond ICAO requirement?  
- Code Share operation shall be approved?  
  
Denmark can not support the two NPA's in their actual version

comment 3632

comment by: *Icelandair***Relevant Text:**

EASA NPA 2009-02 (Entire NPA)

**Comment:**

There is no consistency on the criteria used by EASA for putting certain requirements into the hard-law (IR) and others in soft-law (AMC) or guidance material. The result is that some minor and non-safety related issues (f.e. uniform of the cabin crew) have been put in hard-law, whereas important safety requirements (f.e. definition of adequate aerodrome and Requirements for Rescue and Fire Fighting) have been put in guidance material only. This NPA could therefore lead to reduced flight safety which is unacceptable.

This NPA can therefore not be accepted by AEA.

**Proposal:**

Reconsider the entire NPA and realign it with EU-OPS. Introduce clear (safety) criteria as basis for decision to put certain requirements into IR, AMC or Guidance Material.

comment 3633

comment by: *Icelandair***Relevant Text:**

EASA NPA 2009 (Entire NPA)

**Comment:**

EASA refers to a European Commission Communication on General Aviation and Business Aviation as a justification to introduce less stringent safety rules for business aviation.

With regard to business aviation involving complex motor-powered aircraft, the AEA strongly disagrees with this flawed justification. EASA should stick to its safety mandate. Non-commercial operators of complex motor-powered aircraft (transporting passengers) and that fly in the same airspace as commercial operators should be subject to IDENTICAL safety rules as commercial operators since the safety risks are identical. EASA's proposal to have lower safety rules is not only putting flight safety of non-commercial operators at risk, it is also putting the flight safety of commercial operators and their passengers at risk due to the fact that they share the same airspace (e.g this NPA could lead to an increased amount of mid-air collisions or runway incursions). This is completely unacceptable to AEA and it will make EASA liable in case of accidents involving non-commercial operators of complex motor-powered aircraft.

In this context, the AEA notes that there is already a disproportionate high number of accidents involving non-commercial operators using complex motor-powered aircraft (i.e. UK-CAA report on accidents involving business operators). Finally, the AEA would like to point out that some type of non-commercial operations (transporting passengers) are competing with commercial operations. This NPA which opens the way for non-commercial operators to compete with commercial operators based on lower safety standards is therefore also not providing for a level playing field and is therefore against the basic principles of the common EU market.

**Proposal:**

Realign the implementing rules for non-commercial operators of complex motor-powered aircraft with those of commercial operators of complex motor-powered aircraft

comment by: *British Airways Flight Operations*

British Airways Flight Operations department has been actively involved with the industry working groups which have been assessing NPA 2009-02, both within the United Kingdom and internationally. In general, our opinions about the material presented in NPA 2009-02 agree wholeheartedly with those of the Association of European Airlines (AEA), which, we note, has submitted several hundred comments. We have also worked closely with the UK Civil Aviation Authority, which has also submitted several hundred comments.

We have decided to submit this general comment about NPA 2009-02 so that EASA will be aware, unambiguously, of British Airways' concerns about the material presented in the NPA. It is our opinion that NPA 2009-02 in its entirety is unfit for the purpose for which it is intended and must be withdrawn and

reconsidered. The reasons for this conclusion will be discussed below. As well as making this general comment, British Airways has also submitted many individual comments about the NPA, from a number of different sources within the company; however, all should be seen in the light of this opinion: **that NPA 2009-02 in its entirety is unfit for the purpose for which it is intended and must be withdrawn and reconsidered.** In making other comments British Airways does not seek to endorse NPA 2009-02, but rather to limit the damage which would be done to the industry if the material was adopted into implementing rules.

As the Chairman of the EASA Management Board is on record as saying: the Agency has set out to produce idealistic, holistic perfection; regrettably, it has failed in that task. British Airways' first concern is with the structure of the rule material presented. It is undeniably the case that safety proceeds from simplicity, not complexity. Therefore, for EASA to choose to move from a clear and unambiguous set of rules – published in one or two volumes (EU Ops / JAR Ops 1) – to a complicated and diverse set in many volumes causes us great concern. Furthermore, we note it was specifically the Agency's own decision to create a rule set based on the GERT: NPA 2009-02A makes it clear that neither the SSCC nor the AGNA endorsed that decision. We are also aware from conversations with some of the Agency's Rulemaking Officers that they were specifically instructed to use a different rules structure from that which had gone before "because EASA had to be different." We think such a policy decision - essentially to try to destroy the JAA heritage - by senior personnel from the Rulemaking Directorate (both those formerly employed and those still employed by the Agency) constitutes a serious error of judgment. We believe rules for commercial air transport should be published altogether in one volume, and not mixed with rule material for other types of aviation operations.

Another consequence of the Agency's desire to have one set of rules covering all types of operations is the combination of rule material for aeroplane operations and helicopter operations in the published NPA. Having had experience of the JAA rulemaking processes for Sub Parts D and E, we are aware that helicopter operations were never considered in the development of JAR Ops 1 material, and neither should they have been, by definition. Therefore, to propose rule material which is applicable to both types of operation in one document constitutes a serious mistake, which could give rise to what is called colloquially in English 'the law of unintended consequences'; in this case unintended, adverse, safety consequences. We are aware that one of the arguments the Agency has advanced for putting all rules in one place is the need for legal certainty in rulemaking. We are also aware that the Agency believes the same type of activity should not be regulated in more than one place. However, we believe those arguments are flawed: if rules were to be published separately for 'helicopters' and 'aeroplanes' they would be mutually exclusive and unambiguous, even if they contained similar material.

Many comments will doubtless be received by the Agency expressing disquiet that the material in NPA 2009-02 has departed greatly from EU Ops. We are very concerned that the Agency appears to have forgotten its mission – to promote SAFETY – and strayed into areas of social policy. Much new material has been introduced with no safety justification and with little, if any, meaningful regulatory impact assessment.

Leaving aside the concerns expressed above, much of the material proposed in NPA 2009-02 seems ill thought out and lacking in maturity. We are aware that the Agency has expressed concerns to the European Commission about its resourcing for the rulemaking tasks associated with the extension of scope to

Air Operations. Of course, if EASA is really short of resources, it would have made much more sense for the Agency to base its rulemaking on the existing EU Ops material rather than branching off in new directions. We are aware this latter opinion is shared by the European Commission. Furthermore, we would have expected rule material to be presented in a mature form; instead, we see rule proposals which seem like early drafts rather than finished material. It seems ungracious to say "we told you so"; however, the Agency will be aware that the AEA in particular expressed concern about the scope of the work required of the Agency versus the amount of time and resource available to it, and suggested the establishment of stakeholder working groups to help with the rulemaking tasks. Of course, those suggestions were firmly declined.

Throughout the rulemaking processes which lead to the publication of NPA 2009-02 *et al* various bodies have been engaged with EASA to offer help with its task and, latterly, to express concerns about the direction in which the rulemaking was proceeding. In particular, the AEA has been very proactive in discussing its thoughts and concerns with the Agency. Furthermore, we know the Agency's Executive Director has recently visited the CEOs of several major European operators to discuss issues of concern. Therefore, the Agency should be under no illusions that there is major dissatisfaction among the operators with the direction in which the rulemaking task has proceeded (although we are concerned that some people within the Agency still do not seem to have acknowledged or accepted that fact). Overall however, the Agency has resolutely refused to engage with the operators; has refused to acknowledge that its rulemaking proposals might be flawed; and has failed to understand its responsibilities to the organisations for which it is creating regulations. This lack of accountability is a major cause for concern.

Lastly, we are very concerned that we are being expected to comment on a large amount of new material, to tight timescales, but without all the relevant material having been published. Since EASA has produced a large amount of interdependent material, it is unacceptable for us to be expected to assess that material without all of it being available. The quality of the comments which the Agency receives will undoubtedly be adversely affected thereby, because interested parties are not in possession of all the relevant information.

Therefore, to summarise British Airways' position. We are greatly concerned with the material presented in NPA 2009-02 because:

- It is presented in many volumes in a way which makes it difficult to understand.
- It mixes material for helicopters and aeroplanes in the same document.
- It departs greatly from EU Ops and introduces new material with no safety justification.
- It is ill thought-out and not mature.
- It demonstrates a lack of accountability to operators by the Agency.
- It relies on unpublished material.

In isolation, any of these issues would give us significant cause for concern. Taken together, they lead us to conclude, unreservedly, **that NPA 2009-02 in its entirety is unfit for the purpose for which it is intended and must be withdrawn and reconsidered.** All of the comments which will be entered by British Airways Flight Operations will be suffixed to that effect.

After having examined the NPA No 2009-02c, here are some remarks and suggestion in general:

- 1) Evaluate the benefits of licensing flight ops personnel like dispatchers and mass&balance staff.
- 2) Make the usage of an aircraft situational display with an MET and ATC overlay a necessity to improve the rate of inflight incidents.
- 3) Evaluate and make mandatory a system of a shared responsibility of flight crew and flight operation for the benefit of safety and efficiency.
- 4) The importance of quality management, safety management and human factors is largely not present in the document. The connections and

dependencies between the OM, the OM and the Safety Manual as well as the related processes shall be lined out clearly.

5) The importance and kind of training for personnel other than flight and cabin crew form an integral part of any flight operation and shall be outlined explicitly in the document.

comment 4089

comment by: *Cirrus Design Corporation*

The requirements proposed in Part-OR that are applicable to complex motor-powered aircraft assume an organization exists to support the operations of the airplane. For the Cirrus SF50, this will generally not be the case. Most operators will not have the business systems necessary to support such activities as defined by the Standard Operating Procedures of GM OR.OPS.100.GEN(d). These procedures are typical of an air operator using multiple airplanes with multiple individuals touching the airplane where system complexity necessitates the implementation of this type of system. The Cirrus SF50 will typically only have one individual responsible for the operations of a single aircraft. It would be overly burdensome to require a complex business system to manage the risk of this class of airplane.

Further, the operational requirements of the SF50 will be comparable to that of many other single-engine piston aircraft. The Operations Manual (OM) does not need to be

any more complex than the approved POH that is delivered with the aircraft. The requirements of OR.OPS.015.MLR and the associated AMC define requirements beyond what would be in a POH or otherwise necessary for non-commercial operations conducted by an owner-operator (e.g. management succession plan, management description, accident considerations, personnel qualifications, etc). However, the AMC do not allow the POH to act in place of the OM for complex motor-powered aircraft. This should be considered for non-organizational operators.

comment by: *TAP Portugal*

**Relevant Text:**

(e) Wet lease agreement means an agreement between commercial operators holding a valid AOC in accordance with OR.OPS.015.AOC or an authorization in accordance with Part TCO pursuant to which the aircraft is operated under the AOC of the lessor.

**Comment:**

The requirement for TCO approval is not in line the EU Third Package Legislation (Regulation (EC) 1008/2008), as recently adopted by the EU Legislator,, which refers to approval by the National Aviation Authority (not EASA). Taking into account the fact that wet-leasing is mostly required at short notice to cover for short-term needs,, approval by NAAs is more practical (EASA is not equipped to deal with short-term needs/ operational approvals).

In addition, the EASA rulemaking proposal imposing the full implementing rules provisions on wet—lease will make wet-leasing from non-EU airlines de-facto impossible (due to different regulatory environment etc). This is also in contradiction the EU Third Package Legislation (Regulation (EC) 1008/2008), which refers to equivalent level of safety (not identical safety rules). There is no safety justification for those additional restrictions imposed by EASA

whereas it will reduce the access of EU airlines to wet-lease capacity. This is unacceptable.

**Proposal:**

Re-align the wet-lease requirements with the provisions recently agreed by the EU legislator under the third package (Regulation (EC) 1008/2008) which refer to equivalent safety rather than identical safety rules and which requires NAA approval instead of approval by EASA.

comment by: *Walter Gessky*

**General comment:**

Generic occurrence reporting rules according EU-OPS 1.420 for the operator are missing. This would be the basis for the Agency to fulfill his obligations in accordance to Art 22/1. The system as proposed in NPA 2008/22 (change to part 21) is not adequate and therefore not supported.

**C. III. Draft Opinion Part-OR - Subpart OPS**

p. 4

comment 1539

comment by: *Pietro Barbagallo ENAC*

1) General Comment: With the new set of regulations (Part OR,OPS), consisting of different Parts, it may be difficult for the applicant to establish an easy compliance with the applicable requirements. It is necessary to go through different Parts and find out which requirements are applicable. It could be better to have, like it is today, specific set of regulations for each kind of operation. This is more significant if the search of the applicable requirements through the electronic tool box (available on EASA web site) is not a certified result.

Justification: It may be difficult for the applicant to establish compliance with applicable requirements.

2) General Comment: Several of present requirements included in EU OPS and JAR OPS 3 amend. 5 will be moved to AMC and GM.

Justification :opening up to a wide range of alternative AMCs throughout the EU before the Agency can assess their validity in such a potentially wide range of applications and with an even longer lag before standardisation audits can suggest remedial actions, seems us to carry a significant safety and business risks. The NPA does not suggest that the Agency should give prior approval to alternative AMCs to be adopted by NAAs, and recognise that this would not be appropriate given the legal responsibility to member States to ensure relevant implementation of the relevant Essential Requirements and Implementing Rules. However, if alternative AMCs are to be widely developed and promulgated throughout the community, it seems to us that the Agency and the NAAs should explore urgently what kind of processes could be developed to provide that, as far as possible, the Agency is able to carry out its assessment before alternative AMCs are authorised by an applicant.

3)General Comment: A list of definitions is shown on each Part and relevant guidance material. It could be more useful to have a unique list of definitions because a term may be referred in more than one Part while its definition is provided only in one specific Part.

comment by: DGAC

**Proposal:**

Clarify that an organisation as well as an operator is a legal or natural person and amend AR.GEN and OR.GEN consistently when the word person has been unnecessarily added to the word organisation

**Justification:**

To be able to analyse this subpart (and make it applicable later on) we need to know what is applicable to whom.

It is our understanding (but needs confirmation by EASA) that :

Part OR in its whole is applicable to organisations and that, in the case of operations an organisation is an operator as defined in the Basic Regulation (R216/2008).

Part OR.OPS is only applicable to a subcategory of organisations-operators : those conducting commercial operations or non commercial operations of complex motor-powered aircraft

According to oral explanations given by EASA (*including when meeting the NAAs in Paris in May 09*) :

an organisation can be a legal or natural person (which is in line with the definition of operator in the BR);

when "persons" are addressed in expressions like "an organisation or a person" or "persons or organisations" in AR.GEN and OR.GEN (as proposed in NPA 2008-22), the word person should only mean a natural person seeking or holding an individual certificate or equivalent (e.g. a pilot licence), but in no case a person acting as an organisation performing or proposing to perform an activity covered by the BR.

if some provisions of AR.GEN and OR.GEN (as proposed in NPA 2008-22) are in contradiction with the above logic (e.g. OR.GEN.040 Declaration), they shall be corrected.

comment

comment by: IAOPA Europe

Generally it is found that the current proposal for organisational requirements is not well adapted and proportional for the small one-man organization which in practice may well be a private individual who just enjoys flying his complex aircraft for recreational purposes or for personal transportation.

Trying to enforce an artificial organisational structure with reporting schemes, management structures, written descriptions of all processes and tasks will primarily be a huge time consuming academical paper exercise that does very little to improve flight safety for a one-man-operation.

It might in fact have the opposite effect since it distracts attention from operational tasks which are much more directly related to flight safety such as careful pre-flight planning, checking weather, keeping up to date with airspace requirements etc.

Non commercial operators have been operating complex aircraft for many years without such requirements and according to EASAs own RIA has a safety record which is superior to that of air taxi operators operating equivalent

aircraft. There is therefore no safety case for burdening this group of operators with a whole range of additional organisational requirements.

IAOPA understands that many of these requirements stems from the Basic Regulation which is not the subject of this NPA and which EASA has no direct control over, and IAOPA has throughout the process warned that these requirements would be unsuitable for the small non-commercial operator. In response to this, EASA has repeatedly stated that the implementing rules would be made proportional so that it would cater for the even the smallest non-commercial operator affected by the regulation. With the current NPA in hand regrettably this is not seen to be the case. The majority of rules are clearly written to make sense in a large organisation with paid staff, not for a purely private one-man operation with no paid staff.

How is a private individual supposed to "record all duty and rest periods" as proposed in this NPA? Must he write down every time he goes to sleep? The rule is clearly inappropriate for a private individual with no duty schedule. Yet a private individual must comply with this kind of rule which makes no sense for him.

IAOPA urges both EASA and the Commission to reintroduce the concept of a "Minor Operator" that was originally introduced in JAR OPS 0,2&4. The purpose should be to exempt very small operators from requirements which are entirely inappropriate when there is no genuine organisation.

Since this would involve a revision of the Basic Regulation a separate appeal will be sent directly to the Commission. For now IAOPA will encourage EASA to create a separate rulemaking task focusing on the very small organisation and with with the aim of creating a set of basic rules and AMCs which gives genuine safety benefits for this kind of operator.

### C. III. Draft Opinion Part-OR - Subpart OPS - Section I

p. 4

comment 3107

comment by: DGAC

We do not understand the rationale for mentioning R 216/2008 in the scope of part OPS subparts GEN, CAT & COM and not mentioning it in the scope of both part OR subpart OPS and part OPS subpart SPA?

If, as explained by EASA, the mere application of those subparts is not enough to ensure compliance with the BR, then mentioning the BR in the scope should be avoided as it is confusing and misleading.

#### **"OR.OPS.005.GEN Scope**

This subpart establishes additional requirements to be followed by an air operator:

- (a) Conducting non-commercial operations with complex motor-powered aircraft;
- (b) To qualify for the issue or continuation of an air operator certificate to conduct commercial operations. »

#### **"OPS.GEN.005 Scope**

This subpart establishes the requirements to be met by an operator to ensure that air operations are conducted in compliance with Article 8 in conjunction with Annex IV to Regulation (EC) No 216/2008 (Essential requirements for air operations)."

#### **"OPS.CAT.001 Scope**

This subpart establishes additional and specific requirements to be met by an operator undertaking commercial air transport operations, to ensure compliance with Annex IV to Regulation (EC) No 216/2008 (Essential requirements for air operations)".

**"OPS.COM.005 Scope**

This subpart establishes additional and specific requirements to be met by an operator undertaking commercial operations other than Commercial Air Transport, to ensure compliance with Annex IV to Regulation (EC) No 216/2008 (Essential requirements for air operations)."

**"OPS.SPA.005.GEN Scope**

This part establishes the requirements to be met by an operator to qualify for the issue or continuation of specific operational approvals."

- The inability to allow dynamic references to other standards – in particular the ICAO TIs for DG – is of concern. If EASA does not keep up with international developments operators face double jeopardy – the NAA won't let us use a new ICAO rule, but a foreign NAA (during a ramp check, for example) will fine us for not having applied it. It is not credible that EASA cannot address this matter and avoid slipping behind on international rulemaking developments.
- comment 590 comment by: *Luffahrt-Bundesamt*
- Regarding the operation of sailplanes and powered sailplanes and the possible economic gain with such type of operation, we seriously doubt that the proposed regulations will improve the safety in any detectable way, but lead to a significant decrease of the activities and consequently to a decline in this kind of aviation.
- We propose to exempt sailplanes and powered sailpanes from the scope of this NPA and add the following wording:  
"The operation of sailplanes and powered sailplanes is exempted from the scope of this subpart."

- Paragraph No:** OR.OPS.005.GEN
- Comment:**  
OR.OPS.005.GEN states that this subpart establishes additional requirements to be followed by an air operator. This means that all of the obligations contained in the subpart must fall on the operator as opposed to, for example, a flight crew member or pilot in command. Where the requirement is for some express action to be undertaken by an operator this is clear enough. But many

requirements are not framed by reference to the operator. For example, OR.OPS.145.FC provides that "each flight crew member shall complete recurrent training ...". The legal obligation would appear to be that the operator must ensure that each flight crew member shall complete recurrent training. If all obligations are aimed at the operator, the text should avoid the impression that an obligation is being placed on any other person. If it is intended to place obligations on persons other than the operator, OR.OPS.005.GEN should make that clear.

comment by: UK CAA

**Page No:** 4**Paragraph No:**

OR.OPS.005.GEN (b)

**Comment:** The reference to "an air operator certificate" to conduct commercial operations, assumes only one kind of certificate covering all kinds of commercial operations

**Justification:** The UK CAA considers that one kind of "operator certificate" is not appropriate due to the specific international requirements/obligations regarding an "Air Operator Certificate". The UK proposes that two kinds of certificate be provided for commercial operations, one for CAT and one for commercial operations other than CAT (see also comment 595 to NPA 2008-22).

**Proposed Text (if applicable):**

(b) To qualify for the issue of a certificate to conduct commercial operations.

comment

comment by: Graham HALLETT

OR.OPS.005.GEN

Given that it has been determined by EASA that there is an average of only two balloon accidents per year throughout Europe which may be attributable to OPS, (NPA2009-02G1, 2.3.2.7) it is clear that there is minimal need for operator certification for most commercial ballooning activities, with the possible exception of Commercial Air Transport with balloons. These other ballooning commercial activities should therefore be excluded from the scope of these proposed regulations.

This could be achieved by rewording subclause (b) and splitting it into two subclauses (b) and (c) as follows:

(b) To qualify for the issue or continuation of an air operator certificate to conduct commercial air transport operations;

(c) To qualify for the issue or continuation of an air operator certificate to conduct commercial operations (except balloons).

Paragraph (a)

The use of the single discriminant - of complex aircraft - for the application of this Part to non-commercial operations is too simplistic.

The revision of Annex 6 Part II was based upon the work undertaken for JAR-OPS 2 - Corporate Aviation; the conceptual discussion over the scope of JAR-OPS 2 was mostly concerned with the attempt to decide for what type of operations an 'organisation' was present (or desirable). The debate was extremely long and intense and, in the end, it was decided that there could not be a single discriminant.

The discriminant first considered was an aircraft above a certain break - aligning with those of 23/25 and 27/27; as did EASA, the working group considered that these were complex aircraft for which, in order to operate, an 'organisation' would be required. (This decision was (for aeroplanes) later endorsed by the working group amending Annex 6 Part II.)

Having taken this initial decision, the JAR-OPS 2 working group continued to deliberate on the requirement for an 'organisation', considering the case where more than one aircraft was being employed for Corporate Operations; clearly the more aircraft employed, the more important (to safety and efficiency) an organisation would be - even if those aircraft were non-complex. The operation of more than one aircraft at any one time became the second discriminant. This decision was partially endorsed by the ICAO Annex II working group which resulted in the Recommendation in Chapter 3.2:

Recommendation.- A corporate aviation operation involving three or more aircraft that are operated by pilots employed for the purpose of flying the aircraft should be conducted in accordance with Section 3.

The note to this Recommendation also took a mix of aeroplanes and helicopters into consideration.

In the event, the JAR-OPS 2 working group decided that this set of discriminants might be too heavy and, for Minor Corporate Operations, provided a set of requirements that were proportionate to the size of the organisation.

It is somewhat surprising that the conceptual work conducted for JAR-OPS 2, and Annex 6 Part II, was not considered in the provision of this draft.

As an illustration of what might occur with such a simple scope, consider two operations:

1. Operator A has a single EC145 which has six passenger seats and which is owned and run for VFR private use;
2. Operator B has five EC135s each of which have six passenger seats and which are owned and operated for 'Single Pilot IFR' corporate operations.

When looked at objectively, the complexity the two aircraft is almost identical but Operator B should, undoubtably, have an 'organisation' to manage the operation.

The simplistic use of 'complex aircraft' is not confined to Part OR, it is also used for the Operational Suitability Certificate (OSC) where it will also be problematical. In the OSC, non-complex aircraft (which, for helicopters, includes the small but sophisticated twins like the EC135) do not require to have specific training courses and MMELs defined and can take advantage of 'generic' arrangements.

It is recommended that the scope of this rule is further considered. The

qualification for an organisation cannot be as simple as a single aircraft mass discriminant; it will have to take into consideration other issues that are more relevant. It is also necessary, in the interest of proportionality, to work in the other direction and look at providing the equivalent of a lighter touch for 'Minor Corporate Operations'.

It would be unfortunate if the substantial time and effort spent in the original conceptual work for JAR-OPS 2, and Annex 6 Part II, was completely disregarded.

**Relevant Text:**

(e) Wet lease agreement means an agreement between commercial operators holding a valid AOC in accordance with OR.OPS.015.AOC or an authorization in accordance with Part TCO pursuant to which the aircraft is operated under the AOC of the lessor

**Comment:**

The requirement for TCO approval is not in line the EU Third Package Legislation (Regulation (EC) 1008/2008), as recently adopted by the EU Legislator,, which refers to approval by the National Aviation Authority (not EASA). Taking into account the fact that wet-leasing is mostly required at short notice to cover for short-term needs,, approval by NAAs is more practical (EASA is not equipped to deal with short-term needs/ operational approvals).

In addition, the EASA rulemaking proposal imposing the full implementing rules provisions on wet—lease will make wet-leasing from non-EU airlines de-facto impossible (due to different regulatory environment etc). This is also in contradiction the EU Third Package Legislation (Regulation (EC) 1008/2008), which refers to equivalent level of safety (not identical safety rules). There is no safety justification for those additional restrictions imposed by EASA whereas it will reduce the access of EU airlines to wet-lease capacity. This is unacceptable.

**Proposal:**

Re-align the wet-lease requirements with the provisions recently agreed by the EU legislator under the third package (Regulation (EC) 1008/2008) which refer to equivalent safety rather than identical safety rules and which requires NAA approval instead of approval by EASA.

(b) Flight Data Monitoring (FDM). Considering the available technology a(EFB, SATCOM etc.) and the advantages of a flight watch/flight monitoring and an aircraft situational display (ASD), the proposal is made to evaluate how the above mentioned systems can contribute to flight safety and operational awareness. Hence a more in-depth definition of FDM might be required. The above mentioned applications can and should be used to enhance safety, situational awareness, response time (AF447 is an example) and connect flight crews with the aircraft dispatchers on the ground enabling immediate exchange of operational relevant information, both in text and visual.

comment by: UK CAA

**Page No:** 4**Paragraph No:**

OR.OPS.010.GEN (a)

**Comment:** UK CAA does not understand why code-share arrangements which are essentially marketing arrangements, and which according to this definition may cover arrangements with operators that never visit the Community, should be covered by these OPS requirements.

**Justification:** Given that the scope of these requirements is, according to OPS.GEN.005, to establish requirements to be met to ensure compliance with Article 8 of 216/2008, the UK CAA presumes that code-sharing arrangements are included because it is thought necessary for operation of aircraft referred to in Article 4.1 (c). The CAA does not consider that "an arrangement under which an operator places its designator on a flight operated by another operator" can reasonably be interpreted as a means by which the aircraft used on the flight is used by the first operator. The scope of Article 4.1(c) was discussed at length during negotiation of the text and at the UK specific request was confirmed to cover wet-leasing arrangements: there was no mention of code-sharing arrangements.

comment by: *UK CAA***Page No:** 4**Paragraph No:**

OR.OPS.010.GEN (b) Flight Data Monitoring

**Comment:** The definition of Flight Data Monitoring should only define FDM and not the way in which it may be used. It cannot always be the case that the use of FDM material will be non-punitive. Whilst the data should not be used in a punitive way in cases of unpremeditated or inadvertent infringements of law, there must be an exception in cases of deliberate or gross negligence. The competent authority must also have the right to use FDM material in cases of incompetence by a pilot, which could seriously affect safety.

**Justification:** The definition, as written, would impose a limitation on the competent regulatory authority and could restrict their use of vital safety information. Any policy on how FDM material may be used should be developed separately and not by inclusion in a definition.

**Proposed Text (if applicable):** 'means the use of digital flight data from routine operations to improve aviation safety.'

The term operator does seem very ambiguous, already in the Article 3 (h) of the Basic Regulation.

Who is the responsible operator on the following two cases? There are more.

1, An airplane is owned by a third country trust, with two equal beneficiaries and is flown by pilots lose connection to either one of the beneficiaries, a beneficiary does not have any legally responsibility within a trust.

2. An airplane is owned by two or three individuals and is also flown by mutual friends to them. A responsibility can not be shared by several individuals

**C. III. Draft Opinion Part-OR - Subpart OPS - Section I - OR.OPS.100.GEN  
Operator responsibilities**

p. 4

comment 157

comment by: Association of Dutch Aviation Technicians NVLT

**OR.OPS.100.GEN Operator responsibilities**

*(d) The operator shall establish procedures and instructions for the safe operation of each aircraft type, containing ground staff and crew member duties for all types of operation on the ground and in flight. These procedures shall not require crew members to perform any activities during critical phases of flight other than those required for the safe operation of the aircraft.*

New text proposal:

"The operator shall establish procedures and instructions for the safe operation of each aircraft type, containing ground staff, certifying staff and crew member duties for all types of operation on the ground and in flight. These procedures shall not require crew members to perform any activities during critical phases of flight other than those required for the safe operation of the aircraft".

Explanation: It is a common practice that in a line maintenance environment an engine test run has to be performed for evaluation of technical complaints. In most cases this test run should be performed according the Aircraft Maintenance Manual of the particular aircraft type chapter 5, a pilot is not qualified to perform those test, therefore a certifying mechanic B1 or B2 shall carry out these tests. Due the burden of time, in some cases these tests will be carried out with the crew and passengers on board. Due the fact that the certifying mechanic B1 or B2 is operating the engines there is in this case no clear definition who will be responsible for the safety on board for crew and passengers. In case of an emergency during the test run it is the certifying mechanic B1 or B2 who should notice the upcoming danger. It is to our opinion his or her responsibility to act directly as for example to declare an emergency procedure. Therefore there should be proper guidance from the operator how to act in this case, the responsibilities of the crew and certifying mechanic B1 or B2 should be a clearly defined to avoid misinterpretations and unwanted unsafe situations.

To our opinion there should by a mandatory safety training for certifying staff B1 or B2 who is performing engine test runs on a aircraft for maintenance purposes. There should be no difference in the operators safety procedures for operating aircraft engines by flight crew or certifying staff B1 or B2.

comment

160

comment by: *Association of Dutch Aviation Technicians NVLT*

General: I f a technical complaint for example a specific flight control problem has been solved conform the proper maintenance procedures, it is commonly used that a test flight has to be performed for verification. After a successful test flight the aircraft will be put in commercial service. The certifying staff who are involved with this complaint are also flying along with this test flight for monitoring purposes and evaluation, there is nothing mentioned in this NPA which procedures should be followed in this case.

There should be a procedure for technical test flight, who is involved and which actions and duties are allowed.

comment by: *CAA-NL*

**Comment CAA-NL:**

The text refers to but one element of required dangerous goods training. Also, it refers only to personnel involved "in the handling of aircraft". There are a number of categories of staff (e.g. passenger check in staff, cargo warehouse staff) who work remotely from aircraft but require training. It is also queried why the text "crew members" is needed since these would also be "personnel". Additionally, it is quite common for operators to contract training out to a third party and the text should reflect this.

**Justification:** Part 1 Chapter 4 of the Technical Instructions details the training requirements for all categories of staff.

**Proposed Text (if applicable):**

(f) The operator shall ensure its personnel are trained as required by the International Civil Aviation Organization's Technical Instructions (ICAO TI) for the Safe Transport of Dangerous Goods by Air.

comment 581 comment by: *International Air Transport Association*

OR.OPS.100.GEN(f)

The text of this subparagraph differentiates between crew members and personnel, which appears to be unnecessary as crew members are personnel. In addition the text only refers to persons involved in the handling of aircraft. It could be argued that passenger check-in personnel are not actually involved in "handling aircraft".

It is therefore proposed that this text be revised to read as follows:

"(f) The operator shall ensure that its personnel are trained in accordance with the requirements of the ICAO Technical Instructions."

comment 605 comment by: *AEA*

**Relevant Text:**

(b) The operator shall establish and maintain a system for exercising operational control and supervision over any flight operated under the terms of its declaration or certificate.

**Comment:**

This definition is no in line with EU-OPS.1.195 (Operational Control) which does not refer to supervision to reflect the different concept used in EU compared to North-America.

**Proposal:**

Delete 'supervision' in order to realign this definition with EU-OPS.

comment 606 comment by: *AEA*

**Relevant Text:**

- (a) The operator is responsible for the operation of aircraft in accordance with Annex IV of the Basic Regulation, Part-OPS, the applicable subparts of this Regulation and its declaration or certificate

...

- (d) The operator shall establish procedures and instructions for the safe operation of each aircraft type, containing ground staff and crew member duties for all types of operation on the ground and in flight. These procedures

shall not require crew members to perform any activities during critical phase of flight other than those required for safe operation of the aircraft.

**Comment/Proposal:**

Point (a) is superfluous and could be replaced with a generic paragraph highlighting the need for the operator to comply with the applicable legislation. Suggest to add the definition of "Declaration" within OR.OPS.010.GEN in order to highlight that it is only related to non commercial operations of complex motor powered aircraft.

Critical phases of flight should be defined in OR.OPS.010.GEN (or in a common definition part) as defined in OPS.GEN.010 §15. The definitions paragraph states that the definition are only for the purpose of the subpart, then not applicable for other subparts.

comment 886 comment by: *Federal Office of Civil Aviation (FOCA), Switzerland*

**Concern Detail:**

The text refers to but one element of required dangerous goods training. Also, it refers only to personnel involved "in the handling of aircraft". There are a number of categories of staff (e.g. passenger check in staff, cargo warehouse staff) who work remotely from aircraft but require training. It is also queried why the text "crew members" is needed since these would also be "personnel". Additionally, it is quite common for operators to contract training out to a third party and the text should reflect this.

**Comment:**

Part 1 Chapter 4 of the Technical Instructions details the training requirements for all categories of staff.

**Proposal:**

(f) The operator shall ~~train~~ ensure its ~~crew members and personnel involved in the handling of aircraft to recognise dangerous goods that may be carried inadvertently~~ are is trained as required by the International Civil Aviation Organization's Technical Instructions for the Safe Transport of Dangerous Goods by Air.

OR.OPS.100.GEN (e)

Due to the wide variety of aircraft operated by our company during test flights and ferry flights, including type variations and different production standards within a given aircraft type, and given the extremely short period of time for which those aircraft may be operated (this may be even a single test flight) and the varied backgrounds of the pilots flying these aircraft, the use of one standard checklist for each aircraft type is not practicable.

In these cases it should be possible to refer to the manufacturer recommended operating procedures of this aircraft type/variant and abnormal/emergency procedures as published in the AFM belonging to the subject aircraft.

2475

comment by: *M Wilson-NetJets***Original text:**

OR.OPS.105.GEN Aircraft used in commercial and noncommercial operations  
When an aircraft is operated in commercial and noncommercial operations, the commercial operations specifications shall contain an endorsement for noncommercial operations and the operations manual shall contain a supplement with the operating procedures to be followed in the case of noncommercial operations.

**Suggested new text:**

OR.OPS.105.GEN Aircraft used in commercial and noncommercial operations  
When an aircraft is operated in commercial and noncommercial operations, the commercial operations specifications shall contain an endorsement for noncommercial operations and **in struction shall eit her be contained in a supplement to the OM or be integr ated into the chapters and paragraphs of the commerci al ope rations part of the O M clearly indicating that these proc edures are onl y applicabl e for n on-commercial operation.**

**Comment/suggestion:**

For operations that interchange often between commercial and non-commercial operations it is not as ergonomically for the users of the OM to

have a additional supplement. Therefore, the opportunity should exist for operators to integrate non-commercial instructions and procedures into the structure of the OM whilst clearly indicating that those specific instructions are only applicable to non-commercial operations.

comment 2846

comment by: *Civil Aviation Authority of Norway*

An endorsement in the OM for non-commercial operations should be approved by the competent Authority.

The reason for this is that a commercial operator also conducting non-commercial operations needs to specify to what extent the approved operational control and supervision system will apply in case of non-commercial operations, and to what proportion the operational procedures, competence requirements and management responsibilities shall continue to apply.

### **C. III. Draft Opinion Part-OR - Subpart OPS - Section II - OR.OPS.015.MLR Operations Manual**

p. 5

comment 137

comment by: *EHO*

#### Paragraph (a)

This text is rather heavy, a more concise version might be:

"The operator shall ensure that the operations manual contains all instructions and information necessary for operations personnel to perform their duties."

#### Paragraphs (g) and (h)

Approval of the OM is an extremely onerous task for the Authority; acceptance of the manual is the usual method employed by NAAs.

That this is the norm can be seen by examination of ICAO Annex 6 Part 1 Attachment F. Paragraph 2.1.2 describes those elements that are subject to Approval - i.e. those items that are included on the Operations Specification. Paragraph 2.1.3 of this document more accurately describes the process used by most states when reviewing and accepting the Operations Manual and its amendments.

This view is also confirmed by a reading and understanding of ICAO DOC 8335; nowhere is requirement for Approval specified - it always uses the term "...where required acceptance or approval". A reading of this ICAO document tends to indicate that acceptance is related to the Operations Manual and approval directed towards those elements which form part of the Special Authorisations of the Operations Specification. This supports the stance taken by EASA on minor/major revisions in Subparagraph (h) which appears to

confirm that those items not contained on the list in paragraph 2 of AMC OR.OPS.015.MLR(h) may be addressed by an acceptance rather than an Approval.

The view expressed above is supported by the previous text in EU-OPS 1.1040(i):

"An operator shall supply the Authority with intended amendments and revisions in advance of the effective date. When the amendment concerns any part of the Operations Manual which must be approved in accordance with OPS, this approval shall be obtained before the amendment becomes effective. When immediate amendments or revisions are required in the interest of safety, they may be published and applied immediately, provided that any approval required has been applied for."

The underlined text makes clear that elements of the operations manual are dealt with in different ways depending on the subject; where it concerns an approved element, it must be subject to the approval process.

The stance on minor/major changes is supported as it removes the overly burdensome task (both for the operator and the regulator) of submitting all editorial changes for approval. It might be that, on further consideration of the (potentially) extensive contents of an operations manual, EASA might be persuaded that a more focused approach (on the important elements) will provide a more effective product.

comment 341 comment by: *Association of Dutch Aviation Technicians NVLT*  
pls. specify the phrase 'all personnel', does this include also maintenance personnel, which are also mentioned in this NPA?

comment 348 comment by: *CAA-NL*  
*Comment regarding:*  
EU OPS 1.1040 (c) mentions operations manuals language requirements  
Proposal CAA-NL:  
Add:  
Use of the English language must be encouraged.  
Reason:  
EU allows the use of local languages however when cross-border operations are conducted and/or the operator has non-native personnel, the use of the English language must be encouraged.  
*Comment regarding:*  
(e) The OM shall be kept up to date. All personnel shall be made aware of the changes that are relevant to their duties.  
Proposal CAA-NL:  
Add:

Text must read "each copyholder"

Reason:

EU OPS 1.1040 (h) mentions: that each holder of a OM or parts thereof shall keep the OM up to date with amendments and revisions supplied by the operator.

EASA text can be read as only applicable to the operator or crew (AMC1 (4)).

comment 607 comment by: *AEA*

**Relevant Text:**

(g) For air operator certificate holders, the OM and its amendments shall be approved by the competent authority

(h) Notwithstanding paragraph (g) minor amendments to the OM not affecting the terms of the certificate, may be approved through a procedure specified in the OM

**Comment:**

The total approval of the OM is not in line with EU-OPS. There should not be a requirement for Authority approval of those operator specific additions to the OM, which have a non-regulatory character. Such a requirement could lead to the Competent Authority refusing such additions (due to the fact that the OM is fully approved).

We therefore propose to realign with EU-OPS e.g. not to make the whole OM approved but only parts related to subjects described in AMC OR.OPS.015.MLR(h). The rest of the OM should only remain under the

Competent Authority oversight without specific approval.

In this context, we would like to point out that operations manuals and maintenance manual cannot be compared. Operations manuals are much broader in scope since job cards for maintenance staff are not part of the maintenance manual whereas instructions for operations staff are part of the operations manual. Therefore total approval of the operations manual would be impractical like authority approval of all job cards for maintenance staff would be impractical.

**Proposal:**

It is proposed to replace the (g) by the following :

*"(g) The OM and its amendments shall be provided in advance of the effective date to the Competent Authority unless otherwise agreed with the Competent Authority. "*

Referring to the above comment; paragraph (h) should then be modified as there would be no more indirect approval and replaced by the following wording :

*(h) "Parts of the OM which are subject to the Competent Authority approval, shall be submitted,"*

*"Parts of the OM which are subject to the Competent Authority approval, shall be submitted,*

**Refer to: EU OPS 1.1040:**

(i) An operator shall supply the Authority with intended amendments and revisions in advance of the effective date. When the amendment concerns any part of the Operations Manual which must be approved in accordance with OPS, this approval shall be obtained before the amendment becomes effective. When immediate amendments or revisions are required in the interest of safety, they may be published and applied immediately, provided that any approval required has been applied for.

comment 711 comment by: *Luftfahrt-Bundesamt*

The LBA does not accept the downgrading of Subpart P in JAR-OPS 1 / JAR-OPS 3 in an AMC. The current rule status guarantees a uniform application. We herewith request to re-establish this situation.

Justification: see LBA - General Comment, reasons 1 and 2.

In addition, OR.OPS.015MLR subparagraph (g) requires that for air operator certificate holders the OM and also its amendments shall be approved by the competent authority. EU-OPS 1.1040(b) in its current version requires an approval only of certain parts of the OM otherwise it shall be acceptable to the Authority. OR.OPS.015MLR subparagraph (g) creates additional approval work to be managed by the NAAs but no benefit in safety.

 (a) The operator shall... and training programmes and syllabi. The OM shall especially highlight and describe means and methods for crew of aircraft in flight to communicate with, request support and resources available for in-flight assistance.  
 Taking into account the necessity of experienced, and trained flight dispatchers and flt ops personnel, it is suggested to include icensing requirements and recurrent training schedules here.

- comment 1323 comment by: *Royal Aeronautical Society*

The proposed subparagraph (g) prescribes that, 'For air operator certificate holders, the Operations Manual (OM) and its amendments shall be approved by the competent authority'. Currently, EU-OPS does not require the entire contents of an OM to be 'approved' – only 'accepted' - with specific elements such as the aircraft flight manual, specific operations, etc having to be 'approved'. Use of the term 'approved' implies that the competent authority has sufficient understanding of the proposed operation to be able to agree that the text is – *exactly as drafted* – suitable in all respects for the operations intended to be undertaken by each particular applicant. Whereas this should be feasible for such examples as are given above, it is unlikely to be the case for all other matters written into the OM. There is a risk that if the entire contents of the OM have to be 'approved', there will be confusion as to where responsibility for safe aircraft operations will lie – with the applicant/operator (as specified in Part – AR, VII, Subpart GEN, Section III, GM 1 AR.GEN.300 Continuing Oversight – OPS), or with the competent authority, or shared between the two. Either of the last two options could result in inadequate monitoring and the untimely initiation of necessary remedial action when problems arise. Furthermore, swift action where needed to amend procedures and instructions is unlikely to be forthcoming if proposals desired by the operator must first be subjected to scrutiny by the competent authority before they can be implemented – and this could result in long delays.

The proposed subparagraph (h) states, in effect, that whilst the entire contents of an OM must be *approved*, in fact this need not be the case in all circumstances (provided that a procedure specified in the OM to manage such amendments is followed). This contrary instruction could create difficulties for all parties concerned and lead to further confusion as to who is actually managing operational safety through the medium of the OM.

The procedure for managing Operations Manuals currently prescribed in EU-OPS (OPS 1.1040) works efficiently and should be retained. **It is suggested that the proposed subparagraphs (g) and (h) should be replaced as follows:**

**(g) For air operator certificate holders, the Operations Manual (OM) and its amendments shall be accepted by the competent authority.**

**(h) An operator shall supply the competent authority with intended amendments and revisions in advance of the effective date. When the amendment concerns any part of the OM which must be approved in accordance with the implementing rules, this approval shall be obtained before the amendment becomes effective. When immediate amendments or revisions are required in the interest of safety, they may be published and applied immediately, provided that any approval has been applied for.**

Note that this amendment will, if accepted, require a small change to Part-AR, page 25, AMC 2 AR.GEN.330 Changes – OPS thus: **The changes mentioned in AMC to OR.OPS.015.MLR (h) should be notified to the competent authority for acceptance or for approval, as appropriate, before being implemented.**

comment 1373 comment by: *Pietro Barbagallo ENAC*

Comment: OR.OPS.015.MLR (g) It will not be easy for competent authority to keep up with the amendments high frequency.

Justification: Parts of the Operations Manual are often supplemented or substituted by Aircraft Operating Manuals produced by the TCH or Airway Manuals produced by other organisations. These kind of documents are frequently amended.

Comment: OR.OPS.015.MLR (g) The risk is to give an "empty" approval to certain parts of the Operations Manual (e.g. OM-B, OM-C)

Justification: Parts of the Operations Manual are based on material produced by the TCH. Outside the type certification process, it is not easy to get from the TCH any rationale that enable the Competent Authority to seriously evaluate that material.

Comment: OR.OPS.015.MLR (h) It is not clear the meaning of this kind of approval

Justification: This regulatory system just substituted the term Acceptance with the term Approval but in this case it seem that the essence has not been changed. The result is an unclear situation. Proposed Text: For air operator certificate holders, the OM and its amendments shall be approved by the competent authority directly or indirectly through an approved procedure in the operations manual (GB) (ref. M.A. 704)

Comment: OR.OPS.015.MLR (h) This may lead to a no standardised situation among Member State.

Justification: The terms of this procedure are set in the Operations Manual and so at the operator level.

comment 1484 comment by: *TAP Portugal*

**Relevant Text:**

(g) For air operator certificate holders, the OM and its amendments shall be approved by the competent authority

(h) Notwithstanding paragraph (g) minor amendments to the OM not affecting the terms of the certificate, may be approved through a procedure specified in the OM

**Comment:**

The total approval of the OM is not in line with EU-OPS. There should not be a requirement for Authority approval of those operator specific additions to the OM, which have a non-regulatory character. Such a requirement could lead to the Competent Authority refusing such additions (due to the fact that the OM is fully approved).

We therefore propose to realign with EU-OPS e.g. not to make the whole OM approved but only parts related to subjects described in AMC OR.OPS.015.MLR(h). The rest of the OM should only remain under the Competent Authority oversight without specific approval.

In this context, we would like to point out that operations manuals and maintenance manual cannot be compared. Operations manuals are much broader in scope since job cards for maintenance staff are not part of the maintenance manual whereas instructions for operations staff are part of the operations manual. Therefore total approval of the operations manual would be impractical like authority approval of all job cards for maintenance staff would be impractical.

**Proposal:**

It is proposed to replace the (g) by the following :

*"(g) The OM and its amendments shall be provided in advance of the effective date to the Competent Authority unless otherwise agreed with the Competent Authority. "*

Referring to the above comment; paragraph (h) should then be modified as there would be no more indirect approval and replaced by the following wording :

*(h) "Parts of the OM which are subject to the Competent Authority approval, shall be submitted,"*

**page 5 OR.OPS.015.MLR(c)**

**Comment:**

**Delete this paragraph.**

Although the wording is copied from JAR-OPS 1.1040(j), the "bindingness" of the IR is different. The operator is responsible for compliance with the regulations, not the competent authority. The inspector, or competent authority, can only flag non-compliances, but has no authority to demand other wording. This is only opening the door for authority interpretation resulting in a non-level playing field

**page 5 OR.OPS.015.MLR (g)(h)**

**page 67 AMC OR.OPS.015.MLR (g) and (h) 1, 2**

**Delete** "minor amendments procedure" entirely.

Matters subject to approval are dealt with, and documented, during the certification process. Requiring the competent authority and its inspectors to approve the OM is counter productive to safety as it will delay the OM and its amendments. Also, it is not in line with the concept of the certificate holder being responsible for compliance.

**Amend** "For air operator certificate holders, the OM and its amendments shall be approved by the competent authority." to "For air operator certificate holders, those parts of the OM and its amendments with are considered major changes, hence subject to prior approval i.a.w. AMC OR.OPS.015.MLR(h)2. shall be approved by the competent authority."

comment

1789

comment by: *Austro Control GmbH*

(h)

The "indirect approval" procedure detailed in OR.OPS.015 (h) is unnecessarily limited in scope. Current draft text is in conflict with the recommendation in AMC 3 AR.GEN.305 (3). As any procedure in an OM is subject to initial authority's approval, and will be subject to regular audit, if a company can demonstrate that it is capable of maintaining a high standard of quality, with a strong internal independent checking function, then there is no reason to limit the scope of indirect approval. See EC 2042 M.A.302 (b), EC1703 21A.163 (b) & 21A.263 for other examples of EASA indirect approval legislation.

This comment addresses issues related to the Operations Manual (OR.OPS.015.MLR).

The comment was discussed during the EASA/EBAA Workshop July 9, 2009 in Cologne. The workshop participants, both from EASA and EBAA received the comments favourably.

Operations Manual: Comment to NPA 2009-02c

This comment addresses issues related to the Operations Manual (OR.OPS.015.MLR). The comment was discussed during the EASA/EBAA Workshop July 9, 2009 in Cologne. The workshop participants, both from EASA and EBAA received the comments favourably.

1. Positive changes in NPA 2009-02 compared to EU-OPS:

- OR.OPS.015.MLR(h): The operator now is permitted to implement minor amendments to the Operations Manual in accordance with a specified amendment procedure. This is positive and avoids minor amendments to be submitted on a case by case basis to the Authority.
- GM to OR.GEN.200(a)(6) and AMC1 OR.OPS.015.MLR: The principle of not duplicating information in several manuals is positive. However, if information is not to be duplicated, access to the location of the information needs to be granted. This implies the need for a publication system, which allows navigation across various manuals. The Operations Manual (OM) may be an integral part of the Organisation Manual required in OR.GEN.200(a)(6).
- Structure of OR.OPS: Based on the explanations of Eric Sivel during the EASA/EBAA workshop in Cologne July 9, 2009, it became clear that the structure and chapter system is intended to support the use of data bases. This is a good starting point to integrate the regulations into an automated compliance management by operators.
- AMC1 OR.OPS.015.MLR(6): It is positive that no additional permission as in EU-OPS 1.1040(m) for the publication in other than printed paper is required.
- AMC2 OR.OPS.015.MLR(1) and (4): It is positive that parts of the OM can be substituted by applicable parts of the AFM, or, where such documents exist, by an AOM produced by the manufacturer of aircraft. Referencing from the OM into other material is especially for smaller operators a good solution to avoid lengthy, costly and error-prone copy-paste solutions.

2. Positive changes in NPA 2009-02:

- Terminology and abbreviations: Both the Operations Manual and the Organisation Manual tend to be abbreviated as OM. Suggestion to replace the term "Organisation Manual" by "Management Manual".
- Integration with IOSA standards not reflected: OR.GEN and OR.OPS require the establishment of manuals. Since many operators follow also IOSA

standards, it would be a simplification if the interaction and commonality of the manuals required by both systems would be reflected in an EASA AMC/GM.

- AMC5 OR.OPS.015.MLR A 5.5: The title in A 5.5 should be harmonised with D 2.4. Suggestion to delete the words "other than flight crew" in the brackets.
- AMC5 OR.OPS.015.MLR: No change to EU-OPS 1.1045 and its Appendix 1 to OPS 1.1045. This AMC5 proposes a Table of Contents of Operations Manual. The design and the content of this Table of Contents of an Operations Manual was (under EUOPS) and is (under Part-OPS) not user-friendly and leads to confusion. It mixes various headings of an OM with instructions on information which needs to be inserted. Experience shows that an OM based on App.1 to OPS 1.1045 does not allow to present the information in an organic way by following the work flow. The main headings do not create problems, but the substructure within the various sections of each Part needs to be aligned with the actual process flow. The proposed AMC5 is confusing, as it was in App. 1 to EU-OPS 1.1045: The table suggests to be a Table of Contents, while it is in fact a list of items to be covered mixed with instructions on information to be provided. This sub-structure of this table creates a double bind and does not provide a user-friendly layout for a manual structure, since the order/sequence of items to be covered does not correspond human factors. The main chapter structure though is acceptable. Thus the function of AMC5 OR.OPS.015.MLR is not clear: Authorities will use the table of contents as a strict guideline for the structure and content of an Operations Manual. We propose to allow a second option, Option 2.

Making use of modern technology requires format options for Operations Manual

OR.OPS.015.MLR

AMC5 OR.OPS.015.MLR

Replace the Point/AMC/GM on Structure and Content of an Operations Manual by a Point indicating the elements which need to be covered in an OM, with the main chapter titles only.

Do not include into the IRs a binding detailed format of the OM.

Recommend to include in NPA 2009-02 OR.OPS.015.MLR Operations Manual a provision for more than one option in the AMC/GM for the structure of the OM.

Provide as an alternative, at least two options for the provision of documentation for the acceptable means of compliance. Both options must be ICAO Annex 6 compliant.

Option 1: OM format as proposed in the current NPA (AMC5 OR.OPS.015.MLR Operations Manual). Option 1 limits modern economical data processing methods.

Option 2: OM in electronic documentation capable format

Option 2 not only complies with Annex 6, but also with current ATA requirements. Option 2 would assure compliance to a wide number of aviation standards (regulatory and industry), promising considerable synergy gains.

Options 2 would serve the certification requirements for EFBs, for continued airworthiness etc. and enable a cross-functional multi-media approach to provision of information for users, approvers, developers in manufacturing, certification/supervision, operations and training.

Data-integrity and data-security can only be achieved by using the latest standards in communication/information technology.

Within the main titles of the OM-Structure, a more efficient substructure will enhance the ability of any stakeholder to maximise the efficiency of the manual production process. This will reduce costs for the maintenance and exchange/distribution of OM-data/information.

Option 2 enhances the ability to take into account human factors and to make the documentation more user-friendly. User-friendliness needs to be further studied and defined taking into consideration results from human factors studies and other appropriate scientific tools.

The OM has interfaces to other documentation, which are integrated by using Option 2 (e.g. OM-CAME, OM-(stand-alone)MEL, OM-Security Manual). The complete operator documentation set would benefit greatly from adopting the same (semi-)automated approach.

For EASA and the NAAs there would be minimal differences to the documentation submitted to support an Air Operators compliance as the changes are mainly in the production system.

What would occur is a faster updating of information for new applications and quicker approval of existing operator data.

In light of the current business climate an option for Air Operators to be compliant while using a methodology that offers cost savings and efficiency improvements can only be a great benefit.

As a result of EASA introducing Option 2 into AMC5 OR.OPS.015.MLR (or wherever appropriate in this context), operators would have a much more responsive ability to deliver essential safety information to any stakeholder requiring it. Option 2 also makes easier the electronic communication for the notification of changes to users. Supervision by the operator over OM changes will also be simplified and demand less resources.

The approach recommended with Option 2 is already in force and used extensively for the Initial and Continuing Instructions for Continued Airworthiness and is regarded as industry best practice by Original Equipment Manufacturers and widely used across the airworthiness/manufacturing community, including for the establishment of Flight Manuals and Maintenance Manuals. Operations joining forces with the maintenance community would enhance the interoperability of data and reduce data conflicts and the likelihood of misunderstandings and errors.

Option 2 allows a better use of very expensive information. We know that the maintenance/manufacturing community estimates the cost for one page of technical documentation to be between EUR 500 and EUR 1000 a page. Option 2 allows for easy access to this very valuable information and reduces the life cycle cost for maintaining the documents up-to-date and compliant.

#### **Advantages of Option 2:**

The major advantages would be:

- improved safety,
- possibility to use the advantages of the data base friendly structure of NPA 2009-02 to create (semi-)automated software tools for the establishment and management of manuals
- substantially lower costs for both the industry and certifying/supervising

authorities,

- faster updating of essential information and
- lower resource demand and faster deployment of compliance information for users and approval authorities.

Additional advantages of Option 2 would be:

- a more responsive compliance system,
- compliance with an international recognized standard for aviation documentation,
- full integrations with air vehicle and equipment manufacturers' data production methods,
- information in formats (xml, sgml, pdf, others) for electronic flight bag/e-book readers,
- deployment of current, accurate information to the user at point of use (flight operations, departure planning, training (including recurrent training) and maintenance)
- additional opportunities for air operators to better maintain and sustain a viable business and
- reduced logistics for carrying the required documents on flights.

Disadvantages/Tasks of Option 2:

The single most important step to overcome is for EASA and the approving air operators authority to accept a slightly different format for the proof of compliance documentation.

These variations would be minor but essential. This needs to be implemented in the new regulations.

comment by: *KLM Cityhopper*

**Comment:**

The total approval of the OM is not in line with EU-OPS. There should not be a requirement for Authority approval of those operator specific additions to the OM, which have a non-regulatory character. Such a requirement could lead to the Competent Authority refusing such additions (due to the fact that the OM is fully approved).

We therefore propose to realign with EU-OPS e.g. not to make the whole OM approved but only parts related to subjects described in AMC OR.OPS.015.MLR(h). The rest of the OM should only remain under the Competent Authority oversight without specific approval. In this context, we would like to point out that operations manuals and maintenance manual cannot be compared. Operations manuals are much broader in scope since job cards for maintenance staff are not part of the maintenance manual whereas instructions for operations staff are part of the operations manual. Therefore total approval of the operations manual would be impractical like authority approval of all job cards for maintenance staff would be impractical.

**Proposal:** It is proposed to replace the (g) by the following :

*"(g) The OM and its amendments shall be provided in advance of the effective date to the Competent Authority unless otherwise agreed with the Competent Authority."*

Referring to the above comment; paragraph (h) should then be modified as there would be no more indirect approval and replaced by the following wording :

*(h) "Parts of the OM which are subject to the Competent Authority approval, shall be submitted,"*

comment 3570 comment by: *Heliswiss International*

This text is rather heavy, a more concise version might be: The operator shall ensure that the operations manual contains all instructions and information necessary for operations personnel to perform their duties.

comment 3675 comment by: *AIR FRANCE*

Relevant Text:

(g) For air operator certificate holders, the OM and its amendments shall be approved by the competent authority

(h) Notwithstanding paragraph (g) minor amendments to the OM not affecting the terms of the certificate, may be approved through a procedure specified in the OM

Comment:

The total approval of the OM is not in line with EU-OPS. The OM may include operator specific additions, which have a non-regulatory character. Such a requirement could lead to the Competent Authority refusing such additions (due to the fact that the OM is fully approved).

This total approval may also lead the Competen Authority to be reluctant to delegate approvals as proposed and therefore may lead to a tremendous increase of the workload of the Authority and the operators.

We therefore propose to realign with EU-OPS e.g. not to make the whole OM approved but only parts related to subjects described in AMC OR.OPS.015.MLR(h). The rest of the OM should remain under the Competent Authority oversight without specific approval.

In this context, we would like to point out that operations manuals and maintenance manual cannot be compared. Operations manuals are much broader in scope since job cards for maintenance staff are not part of the maintenance manual whereas instructions for operations staff are part of the operations manual. Therefore total approval of the operations manual cannot be compared with the maintenance manual.

Proposal:

It is proposed to replace the (g) by the following :

"(g) The OM and its amendments shall be provided in advance of the effective date to the Competent Authority unless otherwise agreed with the Competent Authority. "

Referring to the above comment; paragraph (h) should then be modified as there would be no more indirect approval and replaced by the following wording :

(h) "Parts of the OM which are subject to the Competent Authority approval, shall be submitted for approval before being published,"

comment 3762 comment by: *Swiss Helicopter Group*

This text is rather heavy, a more concise version might be: The operator shall ensure that the operations manual contains all instructions and information necessary for operations personnel to perform their duties.

comment 3765 comment by: *ECA - European Cockpit Association*

Comment on paragraph (f): add as follows:

(f) The content of the OM shall be presented in a form which can be used

without difficulty and that observes human factors principles. **An operator must ensure that crew members are able to understand the language in which the relevant operations manual are written.**

Justification:

This is more in line with JAR-OPS 1.025. It shifts the responsibility for a common language to the operator instead of the individual crew member.

comment 3777 comment by: *IACA International Air Carrier Association*

(c)

Delete. Although the wording is copied from JAR-OPS1.1040(j) , the "bindingness" of the IR is different. The operator is responsible for compliance with the regulations, not the competent authority. The inspector, or competent authority, can only flag non-compliances, but has no authority to demand other wording. This is only opening the door for authority interpretation resulting in a non-level playing field.

comment 3778 comment by: *IACA International Air Carrier Association*

(g) and (h)

Delete "minor amendments procedure" entirely.

Matters subject to approval are dealt with, and documented, during the certification process. Requiring the competent authority and its inspectors to approve the OM is counter productive to safety as it will delay the OM and its amendments. Also, it is not in line with the concept of the certificate holder being responsible for compliance.

Amend "For air operator certificate holders, the OM and its amendments shall be approved by the competent authority." to "For air operator certificate holders, those parts of the OM and its amendments with are considered major changes, hence subject to prior approval i.a.w. AMC OR.OPS.015.MLR(h)2. shall be approved by the competent authority."

comment 3852 comment by: *Elitcino SA*

This text is rather heavy, a more concise version might be: The operator shall ensure that the operations manual contains all instructions and information necessary for operations personnel to perform their duties.

comment 3950 comment by: *ANE (Air Nostrum) OPS QM*

Reference: paragraph '(g) For air operator certificate holders, the OM and its amendments shall be approved by the competent authority.' and '(h) Notwithstanding paragraph (g) minor amendments to the OM not affecting the terms of the certificate, may be approved through a procedure specified in the OM.'

The total approval of the OM is not in line with EU-OPS.

There should not be a requirement for Authority approval of those operator specific additions to the OM, which have a non-regulatory character. Such a requirement could lead to the Competent Authority refusing such additions (due to the fact that the OM is fully approved).

We therefore propose to realign with EUOPS e.g. not to make the whole OM approved but only parts related to subjects described in AMC OR.OPS.015.MLR(h). The rest of the OM should only remain under the Competent Authority oversight without specific approval. In this context, we would like to point out that operations manuals and maintenance manual cannot be compared. Operations manuals are much broader in scope since job cards for maintenance staff are not part of the maintenance manual whereas instructions for operations staff are part of the operations manual. Therefore total approval of the operations manual would be impractical like authority approval of all job cards for maintenance staff would be impractical.

Therefore, replace the paragraph (g) by the following :

"(g) The OM and its amendments shall be provided in advance of the effective date to the Competent Authority unless otherwise agreed with the Competent Authority. "

Referring to the above comment; paragraph (h) should then be modified as there would be no more indirect approval and replaced by the following wording :

(h) "Parts of the OM which are subject to the Competent Authority approval, shall be submitted,"

comment by: *Association of Dutch Aviation Technicians NVLT*

OR.OPS.020.MLR Minimum Equipment List (MEL)

It is not clearly stated if a electronic format of the Minimum Equipment List is allowed on board, and if it is allowed how should the interested parties as Flight crew and certifying staff who will use the MEL act if for example those electronic MEL is not working due power failure?

comment

159

comment by: *Association of Dutch Aviation Technicians NVLT*

OR.OPS.020.MLR

*(g) The operator shall publish the operational and maintenance procedures associated with the MEL as part of the operations manual or the MEL.*

(1) a preamble, including guidance and definitions for flight crews and certifying staff using the MEL;

Explanation: maintenance personnel could be anybody in a 145-organisation, certifying staff is personnel has the knowledge and is responsible for the release of an aircraft after maintenance and there fore to our opinion has to carry out the MEL maintenance procedures;

Before a technical complaint will be deferred according the MEL, to our opinion the source of the failure must be known, this statement should be in the MEL and proper trouble shoot procedures should be established for the persons involved.

It must be clearly stated in the MEL what are the maintenance procedures by some particular dispatch items and that those maintenance procedures should only be performed by certifying staff according the proper procedures of the manufacturer.

Explanation: the definition of maintenance is clearly stated in REGULATION (EC) No 2042/2003, therefore all MEL related maintenance procedures should be accomplished by certifying staff and should be carried out by means of a certificate of release to service CRS.

comment 161 comment by: ECA - European Cockpit Association

Comment on OR.OPS.020.MLR(f)(4): change as follows:

(f) Subject to the approval of the competent authority, an operator may use a procedure for the extension of the categories B, C and D rectification intervals, provided that:

- (1) the extension of the rectification interval is within the scope of the MMEL for the aircraft type;
- (2) the extension of the rectification interval granted is, as a maximum, of the same duration as the rectification interval specified in the MEL;
- (3) a description of specific duties and responsibilities for controlling extensions is established by the operator and approved by the competent authority;
- (4) the competent authority is notified of any extension of the applicable rectification interval **and i n any cas e t he competent au thority must approve this extension**; and
- (5) a plan to accomplish the rectification at the earliest opportunity is established.

Justification: Authority must approve any extension notified by the operator.

comment 214 comment by: ECA - European Cockpit Association

Comment on OR.OPS.020.MLR (a) + (b) : Delete OR.OPS.020.MLR (a) + (b)

Justification:

Duplication of requirement from ER 8.a.3 (i)-(iii), ER are more restrictive, this sufficient to comply with EU OPS 1.035 (a).

comment 229 comment by: ECA - European Cockpit Association

Comment on OR.OPS.020.MLR(f):  
Clarification required: add reference to CS.MMEL. Clear mention to relevant part for these definitions shall be specified.

comment 329 comment by: *Association of Dutch Aviation Technicians NVLT*

Please specify which maintenance personnel is allowed to use the MEL and is allowed to dispatch the Aircraft.  
To our opinion referring to maintenance personnel, only certifying staff B1 and B2 is allowed to use the MEL and is allowed to dispatch the Aircraft.

comment 330 comment by: *Association of Dutch Aviation Technicians NVLT*

Please specify who is allowed to carry out the maintenance procedures mentioned in the MEL

To our opinion only qualified mechanics or certifying staff is allowed to perform the MEL related maintenance procedures, however these procedures should be certified in the Aircraft Technical Log by certifying staff B1 or B2.

comment 436 comment by: *CAA-NL*

The CAA-NL has the following comments and questions:

a

What about types not approved by the Agency. And is Part 21 the replacement of Jar 26?

(e)(2)

Normally this is done by the part M and/or 145 organization based on availability of part trouble shooting and maintenance scheduling of the aircraft. The Agency should clarify this in a AMC or GM

f

What does the Agency mean 'within the scope of the MMEL'. E.g. a statement must be written down in the preamble of the MMEL that it is aloud to do so. Please clarify this in an AMC or GM

comment 518 comment by: *AUSTRIAN Airlines*

EU OPS 1.003 and EU OPS 1.030 describe the process on the establishment of a MEL. Note that in EU OPS the operator prepares the MEL "in accordance with a procedure approved by the authority", which then must be "accepted by the Authority".

In Austria, the following procedure was implemented to fulfil this EU OPS requirement: The first issue of a MEL has to be approved by the authority; any subsequent amendment must not be less restrictive than the MMEL and needs only be notified to the authority.

The draft of OR.OPS.020.MLR Minimum Equipment List (MEL) requires that all amendments shall be approved by the competent authority. This is an unnecessary administrative burden on authority and operator without safety benefit.

- For effective oversight, a simple notification by the operator to the authority within the timeframe of 90 days that a MEL was amended is sufficient.
- With the first issue the operator has demonstrated his capability to deal with the MEL topic. Oversight of further amendments, e.g. which only bring the MEL in line with the Master MEL, should be dealt with through the internal quality system of the operator. As it happens, during the Annual Airworthiness Review, the MEL is already subject to scrutiny.
- It cannot be the intention of the regulator to tie the authority down with unnecessary paperwork. If the intention of the regulator is to impose more stringent MEL requirements on an operator due to his scope of operation, and thereby truly enhancing safety, this should be dealt with through audits and occurrence management, not by approving every single piece of paper.

comment by: *Dassault Aviation*

Technical comment.

Page 5 OR.OPS.020.MLR §(g)(1): this § says that the Operator shall take the MMEL (M) and (O) procedures into account when preparing the MEL. We would like EASA to confirm that this wording does not preclude Operators from developing customized (M) and (O) procedures. A Guidance Material could be developed saying "The MEL may contain additional advisory materials or customised operational and maintenance procedures as long as the purpose of the MMEL's operational and maintenance procedures used as reference, as well as the general maintenance and safety precautions, are fulfilled." The Guidance Material could be inserted as GM OR.OPS.020.MLR(g)(1).

comment 1145

comment by: *Austro Control GmbH*

It requested to make a general amendment to this paragraph:

There is still no legal basis for an "indirect MEL approval" (MEL approval by operator with relevant permission) process (unless indirectly implied through OR.OPS.015 (h)). It is essential for proper functioning of authorities that there be a way to step back from this low level detail work, to be able to concentrate on the safety management tasks of identifying the high risk operations, and addressing them.

It is not the purpose of safety management for the authority to be down in the

trenches doing a detailed document review of every document that a good, conscientious operator is producing. It is more important to let them get on with their work and, through audits and occurrence management etc, to identify the problem of organisations/high risk operations and address them. Current draft text is in conflict with the intent of AMC 3 AR.GEN.305 (3).

It has to be emphasised that to approve amendments is an administrative burden for the authorities. Only the operators amendment system shall be approved and checked during the oversight.

Recommendation:

Two additions to OR.OPS.020.MLR:

1/ Add a requirement for the MEL to be established on the basis of an approved procedure (As previously in JAA-MMEL/MEL.050 (a). Without the requirement for the operator to have a controlled process, the MEL system is not auditable.

2/ Add clear regulation of indirect approval process. "Indirect approval" of the MEL should be possible, based on an expansion to the procedure in 1/ above, with the scope approved by the Authority. See EC 2042/2003 M.A.302 (b), EC 1702/2003 21A.163 (b) & 21A.263 for other examples of EASA indirect approval legislation.

comment by: *The TUI Airlines group represented by Thomson Airways, TUIfly, TUIfly Nordic, CorsairFly, Arkefly, Jet4U, JetairFly*

**Comment/Proposal:**

The use of the MEL should be a separate subpart. **Justification:** This section contains material that goes well beyond the scope of Manuals, Logs and Records, as it is about application of the MEL: e.g. "effective rectification programme" has nothing to do with a manual, but everything with maintenance management.

comment

1828

comment by: *Southern Cross International*

For operators only performing contracted ferry flights or test flights for MRO providers, and given the extremely short period of time for which those aircraft are operated, maintaining individual operator MELs for each type/model/variant of aircraft that could potentially be flown is not practicable. Therefore use of an Agency approved MMEL issued and certified by the manufacturer should be considered as an acceptable means of compliance with an equivalent level of safety. Where there is a conflict between the MMEL and an Airworthiness Directive or any other Mandatory Requirement, it is the data or information contained in the Airworthiness Directive or the Mandatory Requirement (e.g. Continued Airworthiness requirement) which shall override.

comment by: *Benedikt SCHLEGEL*

Perhaps this situation could be retrieved by providing three definitions: (a) A to A operations; (b) non-complex operations; (c) local operations, from this would result: (1) non-complex operations with noncomplex aircraft (2) local non-complex operations with non-complex aircraft; and (3) local non-complex operations with complex aircraft. (This could be further shortened if 'local operations' was defined as a restricted subdivision of 'non-complex operations' - i.e. local operations with noncomplex aircraft and local operations with complex aircraft)

comment

2233

comment by: *IAOPA Europe*

For non-commercial operations the MEL should not be required to be approved by the Authority.

Just like the OPS manual is not subject to approval for non-commercial operators the same should be the case for the MEL. This is the basic principle for non-commercial operations.

The associated AMCs should also contain provisions for non-commercial operations. All current AMCs seems targeted at commercial operations.

comment 2548

comment by: *Airbus***OR.OPS.020.MLR(f):**

1) We assume that the term "competent authority" refers to the definition given in the proposed OR.GEN.001 (NPA 2008-22c) or OPS.GEN.001 (NPA 2009-02b). These two definitions are different in wording, if not in substance, and should be enveloped/harmonised.

2) Paragraph (f) refers to rectification interval categories which are not defined in the rule, but only in CS-MMEL. For consistency of the texts, if the categories are listed in the implementing rule, they should also be defined in the implementing rule. Otherwise, they should not be listed in the rule.

3) We suggest rewriting the introductory sentence of (f) as follows:  
An operator may extend the categories B, C and D rectification intervals, under a procedure approved by the competent authority, provided that (...)

4) Subparagraph (f)(3) is redundant with the introductory sentence of (f), and can be deleted. It is sufficient to say in the rule that the procedure has to be approved by the competent authority, and to describe the elements for approval in AMC1 OR.OPS.020.MLR(f).

5) In subparagraph (f)(1), "within the scope of the MMEL" should be clarified. We assume it is meant to reflect the intent of OPS 1.030(b): no operation outside the constraints of the MMEL.

6) Subparagraph (f)(2) limits the extension of the interval to the same duration as the MEL rectification interval (in other words, the extended interval

can not be more than 2 times the original interval?). Is this additional limitation necessary as long as the operation is within the constraints of the MMEL?

comment

comment by: *TNT Airways***Comment:**

(f)(1) : this requirement goes above the requirement detailed in JAR MMEL/MEL .081

All the MMEL are not updated with a preamble taking into account RIE as the specimen for preamble of MMEL and MEL were different in the JAR MMEL/MEL leaving the RIE independent from the MMEL. However this was subject to Authority approval.

**Proposal:**

Either delete (f)(1) and leave it independent from the MMEL but subject to a procedure approved by the Authority

Or Ensure that the preamble of all MMEL will be taking in consideration the RIE opportunity either by a procedure defined in the preamble of the MMEL or at least by a statement on RIE that does not allow them. The later will make it clear to everybody that this point has been considered by the manufacturer.

comment by: *Airbus***OR.OPS.020.MLR(g):**

1) In the introductory sentence of (g), the term "publish", in its dictionary meaning (make available to the public) is inappropriate, since the procedures are for the operator's own use.

2) It is unacceptable to limit the possible repositories for the procedures to the operations manual or the MEL only. A more open wording has to be used, consistent with paragraph 5 of GM OR.OPS.020.MLR(g).

3) In subparagraph (g)(1), "MMEL operational and maintenance procedures" should be replaced by "operational and maintenance procedures referenced in the MMEL".

**Proposed wording:**

(g) The operator shall ~~publish~~ *establish* the operational and maintenance procedures associated with the MEL as part of ~~the operations manual or~~ the MEL *or other Operator's manuals*. The operator shall:

(1) take the ~~MMEL~~ operational and maintenance procedures *referenced in the MMEL* into account when preparing the MEL;

(2) and (3): *no change*

**Amend (a) as follows :**

"A Minimum Equipment List (MEL) shall be established by the operator for each aircraft, based on the Master Minimum Equipment List (MMEL) for the type approved by the Agency in accordance with Part21, **if a available, and shall not be less restrictive than the MMEL;**

**Justification :** Consistency with 8.a.3.iii of the Essential requirements of Annex IV of R216/2008. If it is intended to repeat the provision of the ER in OR.OPS.020.MLR, it shall be repeated entirely.

comment

3117

comment by: DGAC

**(b) :**

**Proposal :**

In the case of non certified operations, the MEL should not be approved. The Declaration already includes a statement by the operator that the Ops Manual reflects the applicable requirements set out in Part OR and Part OPS. As the MEL is part of the OPS Manual, this statement applies to the MEL as well. An additional statement could be added in the Declaration saying that "the MEL has been developed based on the MMEL, etc..."

**Justification :**

The MEL is supposed to be approved prior to any operation. In the case of declaration, no prior authorization is required before operations begin (once acknowledgment of receipt has been received). How can the authority approve a MEL without any detailed knowledge of the type of operation foreseen?

comment

comment by: IACA International Air Carrier Association

The use of the MEL should be a separate subpart. Justification: This section contains material that goes well beyond the scope of Manuals, Logs and

Records, as it is about application of the MEL: e.g. "effective rectification programme" has nothing to do with a manual, but everything with maintenance management.

To confirm that is is compatible with Electronic Flight Bag or other electronic in flight aircrew data capture system. What standards will be required for EFB use in helicopters?

comment 2759 comment by: *Department for Transport UK*

The reference in the final line to the type of flights concerned is inconsistent with the equivalent text in OR.OPS.030.MLR. The text should be aligned.

Proposed text: "....by day flights and over routes navigated....."

comment 2849 comment by: *Civil Aviation Authority of Norway*

The phrase "*by day flights over routes navigated by reference to visual landmarks*" is vague, and does not take into consideration that VFR flights may be complex due to long distances and/or durations, and may include flying in hostile areas. Such complex CAT VFR flights should be subject to an operational flight plan.

- comment 3583 comment by: *Heliswiss International*  
 Unlike the original requirement, here is no limitation on the number of types that the TCM can operate on; it is not clear why there is not an equivalent rule to OR.OPS.250.CC.
- comment 3736 comment by: *Christian Hölzle*  
 Perhaps this situation could be retrieved by providing three definitions: (a) A to A operations; (b) non-complex operations; (c) local operations, from this would result: (1) non-complex operations with noncomplex aircraft (2) local non-complex operations with non-complex aircraft; and (3) local non-complex operations with complex aircraft. (This could be further shortened if 'local operations' was defined as a restricted subdivision of 'non-complex operations' - i.e. local operations with noncomplex aircraft and local operations with complex aircraft)

**C. III. Draft Opinion Part-OR - Subpart OPS - Section II - OR.OPS.030.MLR  
 Information retained on the ground - commercial air transport**

p. 6

- comment 140 comment by: *EHOc*  
General  
 This is an operational instruction and should be contained in OPS.CAT.
- Paragraph (a) - alleviation  
 Within the two original appendices (3.005(f) and (g)) there are alleviations for three types of operation:
- Non-complex operations (VFR day, 9 or less with restriction on some specific operations) with:
- a. non-complex aircraft (1);
  - b. local non-complex operations with:
    - i. non-complex aircraft (2); or
    - ii. complex aircraft (3).
- Because the individual elements have been taken out of the context of the appendices, the prohibitions are no longer present (ensuring that alleviations are only permitted to actual non-complex operations), and the purity of the applicability has been lost. Whilst the insertion of the alleviation within rules is

accepted (and endorsed), because there has been no attempt to provide a descriptive term for each of the three elements above, some alleviations have been missed and other alleviations have been distorted (either too conservative or too liberal).

Perhaps this situation could be retrieved by providing three definitions: (a) A to A operations; (b) non-complex operations; (c) local operations, from this would result: (1) non-complex operations with non-complex aircraft (2) local non-complex operations with non-complex aircraft; and (3) local non-complex operations with complex aircraft. (This could be further shortened if 'local operations' was defined as a restricted subdivision of 'non-complex operations' - i.e. local operations with non-complex aircraft and local operations with complex aircraft)

The definition of 'non-complex operations' could be VFR day with an aircraft with a MPSC of 9 or less (with the specific exclusions contained in the appendices); 'local' could be (non-complex) operations within a limited and defined area (which would have an AMC attached) which start and end at the same location within the same day.

The definition and substitution of these terms within the text would permit simplified rules and resolution of the errors of omission and commission seen in the draft.

Comment CAA-NL:

The text refers only to the requirement for the written information to the pilot-in-command to be retained for 3 months, no mention is made of either the Dangerous Goods Transport Document or the acceptance checklist.

**Justification:** Part 7;4.10 of the Technical Instructions requires the acceptance checklist, Dangerous Goods Transport Document and the written information to the pilot-in-command to be retained for a period of 3 months.

**Proposed Text (if applicable):**

"(5) Dangerous goods transport documents and acceptance checklists;"

- comment 543 comment by: *SCCA/ head of health and safety*  
24 month instead if 15 month so Fatigue risk management can use it for evaluation.
- comment 575 comment by: *AECA helicopters.*  
It should be returned to the FC section:  
"OR.OPS.065.FC Training records  
The operator shall:  
(a) Maintain records of all training, checking and qualification prescribed in this Section undertaken by a flight crew member; and  
(b) Make the records of all conversion courses and recurrent training and checking available, on request, to the flight crew member concerned."
- comment 582 comment by: *International Air Transport Association*  
OR.OPS.220.MLR(b)(4)  
  
The text of this subparagraph only requires that the operator retain the written information to the pilot-in-command. The ICAO Technical Instructions, Part 7;4.10, also requires the retention of the dangerous goods transport document, or the information provided in electronic form, and the dangerous goods acceptance check list.  
  
Proposed revision to subparagraph (4) as follows:  
  
"(4) Dangerous goods transport documents, or the information applicable in electronic form, the acceptance checklist and the written information to the pilot-in-command;"
- comment 594 comment by: *Luftfahrt-Bundesamt*  
As no. (5) should be added:  
**„(5) Dangerous Goods Transport Documents and acceptance checksheets“** since those documents are not mentioned in the present enumeration.
- comment 610 comment by: *AEA*

p. 7

comment

3119

comment by: DGAC

R216/2008 states in recital (7) and in Article 8 the following :

"(7) [...] The Commission should be empowered to develop the necessary implementing rules for establishing the conditions for the issue of the certificate or the conditions for its replacement by a declaration of capability, taking into account the risks associated with the different types of operations, such as certain types of aerial work and local flights with small aircraft."

Article 8.2 :

"Unless otherwise determined in the implementing rules, operators engaged in commercial operations shall demonstrate their capability and means of discharging the responsibilities associated with their privileges."

However there is no provision in the Implementing Rules determining when the certification can be replaced by a declaration.

#### **Proposal :**

In *Section IV-Air operation certification*, add a chapter "**Specific requirements for commercial operations other than commercial air transport** » specify when the certificate can be replaced by a declaration of capability, as mentioned in recital (7) and article 8.2 of R216/2008.

In *Section III-Air operator declaration* **OR.OPS.040.DEC D eclaration**, take into account the fact that not only non-commercial operations of complex-motor powered are subject to declaration, but also some COM operations specified in section IV

**OR.OPS.040.DEC Declaration**

**Add to (c)**

**(c) any additional data requested by the competent authority are adequately provided.**

Justification:

The NAA might require that additional data are provided.

comment 2024 comment by: *IAOPA Europe*

OR.OPS.040.DEC item c should be deleted. The declaration is not an approval and therefore the Authority should not have to explicitly send an acknowledgement of receipt before operations can begin. Any normally accepted kind of receipt should be sufficient. For instance a fax machine receipt or a simple verification by phone.

Great care should be made that the declaration system is not gradually turned into an approval system by the way it is handled.

The Authority Requirements on what the Authority should do when receiving a declaration is a clear indication that this is happening, since they specify a number of checks which the Authority is required to perform before returning a receipt. The declaration/receipt system therefore starts to resemble a light-weight application/approval system. This was not the intention with the basic regulation and is not acceptable for non-commercial operations.

It should be clear that the purpose of a declaration is to inform the Authority about the Operator's existence and activities in order that the Authority can include the Operator in its normal supervision programme. The Authority should in no way be required or expected to do an a-priori approval or assessment of the non-commercial operator. Such requirements would create

an uncertain legal situation regarding the responsibility of the Authority and drive up the costs associated with the declaration process.

comment	2760	comment by: <i>Department for Transport UK</i>
<p>A declaration will not provide a sufficient level of safety oversight for all operators of complex motor-powered aircraft used in non-commercial operations, specifically managed aircraft operations where an aircraft is operated by a specialised management company on behalf of a single, or several, owners. Most such operations are currently treated as commercial air transportation and the operators hold an Air Operator's Certificate. To move such operations out of any certification regime would be a retrograde step with significant safety implications. It is noted that similar operations in the US are issued with mandatory "management specifications" issued by the FAA under subpart K of FAR 91.</p>		
comment	2850	comment by: <i>Civil Aviation Authority of Norway</i>
<p>Comment to (c); If the operation shall not be commenced before the acknowledgment from the competent Authority is received, such acknowledgment will constitute an approval from the competent Authority. Therefore, we suggest that the declaration must be submitted at least 30 days before the planned date of starting operations, giving the competent Authority some time for evaluation of the planned operations, and to be able to decide if parts of the operation needs a specific approval .</p>

comment by: *Civil Aviation Authority Finland*

*Comment on OR.OPS.040.DEC (a):*

The operator's self declaration of his capability and that his manuals, training and procedures are fulfilling the rules can be too optimistic. When the Authority does not check (either even see) the manuals, procedures or training of the operator and the operator does not have any AOC or Approval given by the Authority, there are no means or procedure to deny the the beginning or continuation of the non-standard operation by suspending, limiting or revoking the AOC or the Approval.

*Justification:*

We have seen during some OPS and TRG inspections of the operators or, when inspecting the documents of some applications of ratings, that the training or procedures do not meet all the requirements, even when the operator or training organization has given a statement or certificate that these are done by the requirements.

*Comment on OR.OPS.040.DEC (b):*

When a third party on behalf of the owner is operating a complex motor-powered aircraft as an operator, the operation ("fractional ownership operations") very often is in reality commercial air transport operations, where the owner (or a group of shareholder companies) or the passengers (employees of the owner company) do not have any decision making or supervision of the flight operations.

*Justification:*

It is very difficult for the Authority to supervise this kind of operations and check, if the passengers really are employees or guests of the owner of the aircraft.

Very often this kind of fractional ownership operator has been flying with passengers who (or who's employer) may own a part of shares of some other aircraft operated by the same operator. The fractional ownership operator is also invoicing "the customer" of the flight service and usage of the aircraft per passenger and flight hours flown.

This kind of "private operations" is in praxis CAT without any Operating Licence and AOC.

OR.OPS.040.DEC (c) Declaration

There should be a provision implemented in that rules, enabling operators to commence operation, if no response of the authorities is received 4 or 5 weeks (at the latest) after shipping the declaration to the authorities. Otherwise lack of capacity of an authority could cause an operation to have to quit.

Suggestion:

(c) Operations shall not commence before an acknowledgement of receipt from the Competent Authority has been received. If this acknowledgement is not received within 4 (5) weeks (28 days) from the day the declaration is forwarded to the authority, operations may be commenced under the provisions as layed out in the declaration forwarded.

**1. OR.OPS.040.DEC Declaration**

*Comment:*

The proposed regulation indicates:

(a) Prior to commencing operations, the operator shall declare its capability and means to

discharge the responsibilities associated with the noncommercial operation of complex motorpowered aircraft to the competent authority.

(b) When the noncommercial operation of a complex motorpowered aircraft is managed by a third party on behalf of the owner, that party shall declare its capability and means to discharge the responsibilities associated with the operation of the aircraft to the competent authority.

(c) Operations shall not commence before an acknowledgement of receipt from the

Competent Authority has been received.

The basic rule and the guidance material are unclear as to which operations (foreign and domestic) are effected by this requirement. The guidance material does not provide necessary instructions as to how this is to be accomplished. For example, does the regulation apply to a one-time operation of an aircraft that is not licensed in an EASA Member State? How will a one-time operator comply with this requirement if it is applicable to these operations, and where will the operator submit the declaration? Will EASA be equipped to handle requests from non-EASA member licensed operators in a timely manor?

*Recommendation:*

Modify the guidance material to more clearly define the applicability of this provision and the process to be used to comply.

- Comment:*  
 Content of Declaration Form is not described. The form should include more detail or instructions for completion. If persons completing the Declaration do not understand what information is being requested, you may find inconsistencies in the information collected. For example, there is a block for "organizational structure," but some private operations using complex motor-powered aircraft may not involve an organization.
- Recommendation:*  
 Include descriptions of the information requested in each block of the form.

### C. III. Draft Opinion Part-OR - Subpart OPS - Section IV

p. 9

- comment 3119 ❖ comment by: *DGAC*
- R216/2008 states in recital (7) and in Article 8 the following :
- "(7) [...] The Commission should be empowered to develop the necessary implementing rules for establishing the conditions for the issue of the certificate or the conditions for its replacement by a declaration of capability, taking into account the risks associated with the different types of operations, such as certain types of aerial work and local flights with small aircraft."

Article 8.2 :

“Unless otherwise determined in the implementing rules, operators engaged in commercial operations shall demonstrate their capability and means of discharging the responsibilities associated with their privileges.”

However there is no provision in the Implementing Rules determining when the certification can be replaced by a declaration.

**Proposal :**

In *Section IV-Air operation certification*, add a chapter “**Specific requirements for commercial operations other than commercial air transport** » specify when the certificate can be replaced by a declaration of capability, as mentioned in recital (7) and article 8.2 of R216/2008.

In *Section III-Air operator declaration* **OR.OPS.040.DEC D eclaration**, take into account the fact that not only non-commercial operations of complex-motor powered are subject to declaration, but also some COM operations specified in section IV

The change has been noted, but it is accepted.

comment 441 comment by: *CAA-NL*

Comment CAA-NL:  
The A to A operations of piston engine driven aircraft with a max of 4 seats and operating only in the FIR of the Authority which should be relieved of an EASA AOC. The working time of these operators is most of the time for circa 6 months a year. The EASA OPS is not written for this kind of operations. Place it in its total under the responsibility of the local authority.

comment 576 comment by: *AECA helicopters*.

(h) define minor change, to guarantee the basic approval of the OM.

comment 698 comment by: *Civil Aviation Authority of Norway*

Coment to paragraph b:  
The requirement for the Accountable Manager to be accepted by the Competent Authority seems to be lost compared to EU-OPS 1.175 (h) and JAR-OPS 3.175 (h).  
Considering the Accountable Manager’s essential function in the organization, and as the focal point for the communication with the Competent Authority, we would strongly suggest that this position still will be subject to an acceptance by the competent authority. The acceptance serves as a safeguard against appointing inexperienced/unsuitable candidates for the position (which could possibly have a negative impact on flight safety). The acceptance also serves as an opportunity for the Competent Authority to interview the candidate, and

to make sure that the candidate has understood the responsibilities of the position as Accountable Manager.

We therefore strongly suggest to maintain the requirement for such acceptance as in EU-OPS 1.175 (h) and JAR-OPS 3.175 (h), and/or specify the criteria/qualifications etc. that should be taken into account when such an acceptance is made.

**Page No:** 10 of 136

**Paragraph No:** OR.OPS.015.AOC (c) (2)

**Comment:** The rule states that all aircraft operated have a certificate of airworthiness in accordance with Part 21.

**Justification:** This, de facto, will prevent the vast majority of dry lease-in arrangements from third countries because such aircraft are unlikely to have a C of A issued in accordance with Part 21. At page 45, para 16 the Agency appears to acknowledge the problem such a rule creates, but the proposed rule does not cater for the dry-lease situation.

**Proposed Text (i f applicable):** "all aircraft operated have a certificate of airworthiness in accordance with Part 21, or an equivalent standard if registered outside the Community."

comment 1766 comment by: *Axel Ockelmann + Manfred Poggensee Commercial Balloon Operators Germany*

From our point of view regarding to EC-Directive 216-2008 article 3 i) the request/demand of an AOC is unreasonable.  
A declaration for commercial balloon-operations is sufficient.

comment 1884 comment by: *Southern Cross International*

OR.OPS.015.AOC (b)(2)

The type of operations performed by our company involves a wide variety of different aircraft types. This makes it difficult to comply with this requirement.

comment 1885 comment by: *Southern Cross International*

OR.OPS.015.AOC (c)(2)

The nature of our operations may require us to operate aircraft with a permit to fly.

It is proposed to modify OR.OPS.015.AOC as follows:

(c)(2) all aircraft operated have a certificate of airworthiness or permit to fly in accordance with Part21;

comment 1886 comment by: *Southern Cross International*

It is unclear how compliance with OR.OPS.015.AOC (c) (2) should be obtained in case of a test flight or ferry flight with a (complex motor-powered) aircraft which is registered in a third country and owned cq operated by a non-Community operator.

This is in particular important for Community MRO providers and leasing companies that need to carry out test and/or ferry flights.

comment 2762 comment by: *Department for Transport UK*

An AOC is a requirement of Annex 6 to the Chicago Convention for operators

involved in commercial air transport (CAT) operations. The AOC is recognised worldwide as a document that authorises the holder to conduct CAT operations. To issue AOCs to operators which are not authorised to conduct CAT would move away from the ICAO system and could cause confusion in third countries about what EASA AOC holders are authorised to do. A separate certificate should be established for non CAT commercial operations

**(c)(1) :****Proposal :**

Amend (c)(1) as follows :

(1) they comply with all the applicable requirements of this Part, ~~and~~ Parts OPS **and with Annex IV of the Basic Regulation;**

**Justification:**

OR.OPS.100.GEN states that "The operator is responsible for the operation of the aircraft in accordance with Annex IV of the Basic Regulation, Part OPS, the applicable subparts of this Regulation and its declaration or certificate."

When applying for an AOC, the applicant should not only demonstrate the compliance with Part OPS & Part OR but also with Annex IV of the Basic Regulation

comment

3122

comment by: DGAC

**(c)(2) :**

A "standard"/restricted Certificate of Airworthiness is Part 21 and therefore shall comply with the applicable provisions related to continuing airworthiness and maintenance (Part M, Part 145, etc...) according to R216/2008. Such an aircraft can not be considered as an Annex II aircraft anymore.

Therefore, as Annex II aircraft can not comply to (c)(2) of OR.OPS.015.AOC requesting all aircraft operated in commercial air transport to have a certificate of airworthiness in accordance with Part 21, we understand that aircraft referred to in points (a)(ii), (d) and (h) of Annex II are not eligible for Commercial Air Transport (CAT) according to § 5 of article 4 of R216/2008.

comment

3359

comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)***Paragraph text:**

a) Without prejudice to Regulation (EC) 1008/2008, prior to commencing commercial air operations, the operator shall apply for and obtain an air operator

certificate issued by the competent authority.

**Comment:**

There seem to be no balance/harmonisation between regulation (EC) 1008/2008 and the proposal. An AOC has a certain meaning in regulation (EC) 1008/2008 and is only applicable to commercial air transport. It is not the same as in the proposal. Hence it creates confusion when reading the text.

**Proposal:**

Clarification is needed.

comment

3360

comment by: *Luftfahrt-Bundesamt*

The requirement in OR.OPS.015 AOC (c)(2) asking for a CoA issued in accordance with Part 21 is not harmonised with Article 4, paragraph 5, asking operators of aircraft falling under the Annex 2, paragraphs (a)(ii), (d) and (h) of the Basic Regulation to comply with this Regulation and its corresponding implementing rules. For an Annex 2 aircraft, it is not possible to issue an airworthiness certificate in accordance with Part 21. Hence, OR.OPS.015 AOC needs to be adjusted accordingly.

comment

3626

comment by: *Austro Control GmbH*

The new wording of OR.OPS.015 AOC addresses only a very few cases (e.g. Beluga), but does not cover the majority of the existing derogations. What about Annex II aircraft wie CofA according to ICAO Annex 8? Therefore the explanations in NPA 02a, Page 45, Point 16 are not valid for all kind of Annex II aircraft and derogations will be further necessary. Additionally in the strict sense of the new wording ,all CofA issued before entering into force of Part 21 would not be qualified for AOC. Therefore grandfathering must be assured. It is assumed that also derogations continue to be valid.

It is unclear and not comprehensible why an aircraft with a restricted Cof A according to Part 21 should be qualified for an AOC, where an ICAO Annex 8 conforming standard Cof A should not. Those cases, especially third country registered aircraft (with oversight transfer), were brought to Commission for derogation. A general clear statement would be helpful.

Because of missing NPA-TCO this comment might be incomplet.

**C. III. Draft Opinion Part-OR - Subpart OPS - Section IV - OR.OPS.020.AOC  
Operation specifications and privileges of an air operator certificate holder**

p. 10

comment

1388

comment by: *Austro Control GmbH*

In conjunction with NPA 2008-22b (page 28; Form OPSSPECS) Austro Control recommends that for important reasons of transparency and administrative procedures the registration number of each aircraft operated by an operator should be mentioned on the form (and not only in the OM).

Therefore it is suggested to add a field on the OPSSPEC Form that provides the insertion of the registration number (Page 28 and 29 of NPA 22b).

comment

3124

comment by: *DGAC*

**Proposal :**

Delete (b)

**Justification :** o There is no use saying that “The privileges of the holder of an air operator certificate may include any of the operations requiring specific approvals referred to in PartOPS.SPA.”  
o The use of “may” makes that provision more a guidance material than a requirement  
Some SPA are restricted to CAT (HEMS for instance... *though it will be proposed in our comments to move HEMS back to CAT*)

comment 233 comment by: *ECA - European Cockpit Association*

Comment on OR.OPS.030.AOC: add new paragraph (e) on wet lease out as follows:

**WET LEASE-OUT**  
**(e) Any Community Operator wet-leasing out an aircraft registered in the Community to a third country operator shall remain the operator of the aircraft and retain all functions and responsibility prescribed in section IV.**

Justification:  
 Provisions on wet lease-out are missing.  
 Such provisions are required to ensure a safe and secure return of aircraft and crew within the operator's certificate scope, in particular in terms of aircraft maintenance and crew training and checking.

comment 344 comment by: *CAA-NL*

CAA-NL proposal to change ANY LEASE-IN as follows:

(a) Without prejudice to Regulation 1008/2008, any lease-in agreement for aircraft used by an operator for which any Member State ensures oversight of operations or used into, within or out of the Community by an operator certified in accordance with this section (Community operator) shall be subject to prior authorisation of the competent authority.  
 (AMC OR.OPS.030 shall include more detailed provisions regarding wet-leased aircraft registered within the Community to mitigate "endangering safety" as meant in CR 1008/2008 Article 13 and, more specific, expelling lease-in of Community operators with EC SAFA warnings.)

Justification  
 According to Article 13.1 of Regulation (EC) 1008/2008, Community air carriers may freely operate wet-leased aircraft registered within the Community except where this would lead to endangering safety. The Commission shall ensure that the implementation of such a provision is reasonable and proportionate and based on safety considerations. According to 13.2 any wet lease agreement under which the Community air carrier is the lessee of the wet-leased aircraft shall be subject to prior approval.  
 For safety considerations, member states may wish to mitigate risks by expelling the possibility to wet lease-in certain Community aircraft that have been earmarked in the SAFA program for closely monitoring (see also PART AR section IV). Furthermore, the lessee may be advised to conduct an onsite audit of the Community operator (lessor) to ensure compliance with the standards maintained by the lessee under its approved AOC (level of implementation, safety culture i.e.).

comment 345 comment by: *CAA-NL*

CAA-NL proposal to change WET LEASE-IN as follows:

(b) To obtain the authorisation as referred to in (a) above for the wet lease-in of an aircraft registered in a third country, an operator for which a Member States ensures oversight of operations, shall demonstrate to the competent authority that:

(1) The lessor is an operator holding an authorisation in accordance with Part-TCO and

(2) comply with safety standards equivalent to:  
 Part-OPS.GEN, Part-OPS.CAT (excluding OPS.CAT.220.A?), Part-FCL Annex III, OR.GEN Section 2, OR.OPS.GEN, OR.OPS.MLR excluding OR.OPS.020.MLR, OR.OPS.FC, the cabin crew medical and training requirements of OR.OPS.CC, OR.OPS.TC, OR.OPS.FTL including related CSFTL and OR.OPS.SEC; Part-M; and Part-145.

**Justification**

According to Article 13.3 of Regulation (EC) 1008/2008 a Community air carrier may obtain prior approval to wet lease aircraft registered in a third country from another undertaking, if the Community air carrier demonstrates to the satisfaction of the competent authority that all safety standards equivalent to those imposed by Community or national law are met.

According to articles 4.1(c) and 8.1. of the Basic regulation (216/2008), aircraft registered in a third country, and used by an operator for which any Member State ensures oversight, shall comply with the essential requirements laid down in Annex IV.

When an third country aircraft is used by an Community operator and is operated under the AOC of the third country lessor (Wet lease-in) it seems not logical that such aircraft also shall comply with the essential requirements laid down in Annex IV but shall have equivalent safety standards.

comment

346

comment by: CAA-NL

CAA-NL proposal to add OR.OPS.030 (c) regarding 'any lease' as follows:  
 Any lease-out for aircraft used by an operator for which any Member State ensures oversight of operations or used into, within or out of the Community by an operator certified in accordance with this section shall be subject to prior notification to the competent authority (including the specifications of the lease (area of operation, use of other cabincrew, functions and responsibilities i.e.)

**Justification**

The provision of EU OPS 1.165(b)(c) regarding wet lease-out seems not longer to be applicable in OR.OPS.030.AOC. Also, Regulation (EC) 1008/2008 does not require prior approval when the Community operator wet-leases out (as a lessor) an aircraft. However, the Authority has to verify if the lease-out is covered by the AOC (training of damp cabin crew, outstations, handing, use of lessee's procedures i.e.) Also, the EU has to be informed in case of wet lease-out to a blacklisted carrier.

comment

347

comment by: CAA-NL

CAA-NL proposal to add OR.OPS.030 DRY LEASE-in as follows:

Any dry lease-in of an aircraft registered in a third country by an operator for which any Member State ensures oversight of operations, shall be subject to the prior authorisation of that Member State's competent authority.

To obtain the authorisation as referred to above, the following conditions shall be met:

(1) The Member State started a procedure to accept the aircraft on its national register as meant in article 12 of EC regulation 1008/2008;

(2) Dry lease-in while registered in a third country is necessary for overcoming a limited period prior to registration in the national register of the Member State. This period shall not exceed 2 months;

(3) The lessee shall ensure that the aircraft has an equivalent safety level and

any differences from the applicable retroactive airworthiness requirements and/or the requirements prescribed in PART OPS Section IV (Instruments, data and equipment) are notified to and are acceptable to the competent authority;

(4) the competent authority of the lessor has transferred its responsibilities for oversight of operations and maintenance to the competent authority of the lessee;

(5) the aircraft is removed from the AOC of the lessor;

(6) the aircraft is maintained in accordance with an approved maintenance programme.

### **Justification**

The provision on waiver of article 8.3 of Regulation (EC) 2407/92 has been removed with Regulation (EC) 1008/2008; according to Article 13.2 a dry lease agreement to which a Community air carrier is a party (...) shall be subject to prior approval in accordance with applicable Community or national law on aviation safety.

Article 12 of Regulation (EC) 1008/2008 is more restrictive than regulation 2407/92 and EU OPS. In case of dry lease-in, including financial lease, no waiver of registration can be given and thus aircraft registered in a third country with "equivalent" instruments or communication/navigation equipment can not (temporary) be added to the AOC unless registered within the Community and fully compliant with the essential requirements laid down in Annex IV.

Within EU OPS 1.165(c)(1)(ii) a Community operator could ensure that, with regard to aeroplanes that are dry leased-in, any differences from the requirements prescribed in EU OPS Subparts K, L, and/or OPS 1.005(b), are notified to and are acceptable to the Authority.

Such a provision may be necessary to overcome a limited time prior to national registration. In stead of "damp leasing" a third country aircraft with lessee's flight crew operating under Lessor's AOC it would be more transparent if the third country aircraft may temporary be added to the AOC and operated under the Lessee's management.

### **Relevant Text:**

#### **WET LEASE-IN**

(b) To obtain the authorisation as referred to in (a) above for wet lease-in of an aircraft registered in a third country, an operator for which a Member State ensure oversight of operations, shall demonstrate to the competent Authority that:

(1.) The lessor is an operator holding an authorization in accordance with Part TCO; and

(2.) The following requirements are met: (i) Part-OPS.GEN; (ii) for commercial air transport (CAT) operations Part-OPS.CAT excluding OPS.CAT.220.A if authorised by the state of the operator (iii) for commercial operations other than CAT, Part-OPS.COM; (iii) Part-FCL Annex III; (iv) OR.GEN. Section 2; OR.OPS.GEN; OR.OPS.MLR excluding OR.OPS.020.MLR; OR.OPS.FC. the cabin crew medical and training requirements of OR.OPS.CC, OR.OPS.TC, OR.OPS.FTL including related CS-FTL and OR.OPS.SEC (v) Part-M and (vi) Part-145

(3.) Compliance with the essential requirements and applicable implementing rules may be demonstrated by applying the procedures contained in the operations manual of the lessor

**Comment:**

The requirement for TCO approval is not in line the EU Third Package Legislation (Regulation (EC) 1008/2008), as recently adopted by the EU Legislator,, which refers to approval by the National Aviation Authority (not EASA). Taking into account the fact that wet-leasing is mostly required at short notice to cover for short-term needs,, approval by NAAs is more practical (EASA is not equipped to deal with short-term needs/ operational approvals). In addition, the AEA is concerned about the level of fees that EASA will impose for such approvals under the TCO.

In addition, the EASA rulemaking proposal imposing the full implementing rules provisions on wet—lease (para (b) (2) and (3)) will make wet-leasing from non-EU airlines de-facto impossible (due to different regulatory environment etc) even from countries with similar safety levels such as the USA, Canada, etc. This is also in contradiction the EU Third Package Legislation (Regulation (EC) 1008/2008), which refers to equivalent level of safety (not identical safety rules). There is no safety justification for those additional restrictions imposed by EASA whereas it will reduce the access of EU airlines to wet-lease capacity. This is unacceptable.

**Proposal:**

Re-align the wet-lease requirements with the provisions recently agreed by the EU legislator under the third package (Regulation (EC) 1008/2008, Article 13) which refer to equivalent safety rather than identical safety rules and which requires NAA approval instead of approval by EASA.

Therefore para (b) should be replaced with:

Wet Lease In:

A community air carrier wet leasing aircraft registered in a third country from another undertaking, shall obtain prior approval for the operation from the competent licensing Authority. The Competent Authority may grant approval if the community air carrier demonstrates to the satisfaction of the competent Authority that all safety standards equivalent to those imposed by Community or national law are met.

**Comment:**

This paragraph does not cover for the short-time wet-leasing needs of many EU airlines. This needs to be added and to avoid a situation where Competent Authorities refuse wet-leasing outside Europe through referring to OR.OPS.030.AOC Leasing

**Proposal:**

Add a paragraph to cover short-term wet-leasing needs (up to 2 months). 'For

unforeseen urgent operational circumstances or operational needs of limited duration, the Competent Authority may grant authorization for wet-leasing arrangements of limited duration provided that safety is not adversely affected. This does not imply a need for the lessor to comply with the EASA Implementing Rules'

comment 1241 comment by: *Austro Control GmbH*

General comment to (a):

Any lease-in:

it should be clarified, that only operational lease-in has to be considered (financial lease, as known eg by ICAO Doc 295, should not be included by this operational requirement).

*"Without prejudice.... any **operational** lease-in agreement...."*

comment 1249 comment by: *UK CAA*

**Page No:** 10 of 136

**Paragraph No:** OR.OPS.030.AOC Leasing

**Comment:** The text uses the word 'authorisation' rather than 'approval'.

**Justification:** EC Reg 1008/2008 and EU-OPS use 'approval' when describing the process of permitting a lease arrangement. This is a consistently used and understood term in the context of leasing.

**Proposed Text (if applicable):** Replace "authorisation" with "approval".

comment 1250 comment by: *UK CAA*

**Page No:** 10 of 136

**Paragraph No:** OR.OPS.030.AOC (a to d)

**Comment:** The draft text contains no requirements to cover dry lease-in of Community registered aircraft.

**Justification:** EC Reg 1008/2008, Article 13 (2) requires that a dry lease agreement to which a Community air carrier is a party shall be subject to prior approval in accordance with Community law. In this case EU-OPS is the law for aeroplanes, and EU-OPS 1.165(b)2(i) requires prior approval before operating a dry lease-in from a Community operator.

**Proposed Text (if applicable):** OR.OPS.030.AOC (a) - ".....registered in a third country or a Member State and used by an operator....."

comment 1251 comment by: *UK CAA*

**Page No:** 10 of 136

**Paragraph No:** OR.OPS.030.AOC (b)(2)

**Comment:** The text requires specific adherence to European Requirements

rather than ICAO standards or equivalent safety standards e.g. FARs, CARs etc.

**Justification:** By demanding strict adherence to European Requirements rather than permitting acceptance of equivalent safety standards, the wording as written would preclude, or severely limit, wet leasing in of Third Country aircraft. The concept of equivalent safety standards for wet leasing Third Country aircraft is recognised and clearly stated in EC Reg 1008/2008, Article 13 (3) (a) and OR.OPS.030.AOC (a) states that an approval should be granted "Without prejudice to Regulation 1008/2008".

**Proposed Text (if applicable):** Replace "The following requirements are met:" by "Standards equivalent to the following requirements are met:"

comment

comment by: UK CAA

**Page No:** 10 of 136

**Paragraph No:** OR.OPS.030.AOC (b)(3)

**Comment:** The use of the word "applying" is inappropriate.

**Justification:** The use of "applying" suggests following the procedure in the operations manual rather than checking the procedure is present.

**Proposed Text (if applicable):** ".....may be demonstrated by confirmation that the appropriate procedures are contained in the operations manual....."

comment

1253

comment by: UK CAA

**Page No:** 11 of 136

**Paragraph No:**  
OR.OPS.030.AOC (d)(1)

**Comment:**

In the case of a dry lease-out between operators whose AOCs are issued by the same Member State there is no need to transfer responsibilities for the oversight of operations and maintenance.

In addition, in agreeing to a 'transfer' of responsibilities, the rule does not permit any flexibility in what aspects are to be transferred.

**Justification:**

As the oversight responsibility does not change, a Member State's normal methodology for accepting an aircraft onto an AOC would apply and no transfer of responsibility occurs.

There may be practical reasons why retention of responsibilities are appropriate, e.g. a leased aircraft may remain in the lessor's Member State as part of the lessee's operation, or other examples where the maintenance and continued airworthiness responsibilities may be retained by the lessor's competent authority.

**Proposed Text (if applicable):** "except in the case of a dry lease between

operators overseen by the same Member State, the competent authority has reached agreement with the competent authority of the lessee on which responsibilities are to be transferred for the oversight of operations and maintenance;"

comment

comment by: UK CAA

**Page No:** 11**Paragraph No:** OR.OPS.035.AOC**Comment:**

UK CAA does not understand why code-share arrangements which are essentially marketing arrangements, and which according to the definition in this NPA may cover arrangements with operators that never visit the Community, should be covered by these OPS requirements.

**Justification:**

Given that the scope of these requirements is, according to OPS.GEN.005 to establish requirements to be met to ensure compliance with Article 8 of 216/2008, the UK CAA presumes that code-sharing arrangements are included because it is thought necessary for operation of aircraft referred to in Article 4.1 (c). The CAA does not consider that "an arrangement under which an operator places its designator on a flight operated by another operator" can reasonably be interpreted as a means by which the aircraft used on the flight is used by the first operator.

The safety of third country operators operating aircraft into, within, or out of the Community, whether or not subject to marketing arrangements such as code-sharing, are in scope of Article 4.1(d) and will be covered by the measures designed to implement Article 9 of 216/2008; as such they will be subject to an authorisation issued in accordance with Part-TCO.

- 2009-02c, Subpart OPS, Section IV, OR.OPS.030.AOC Leasing (Seite 10 f.):**
- missverständliche Formulierung: während aus (a) und (b) eindeutig hervorgeht, dass diese Regelungen nur für Leasing zwischen einem Community Operator und einem Third Country Operator gelten, ist der Anwendungsbereich in (c) und (d) nicht klar angegeben.
- Generell zum Leasing: dieses Thema (insbesondere Dry Lease) ist derzeit nicht befriedigend und vor allem nicht einheitlich geregelt. Insbesondere ist nicht klar festgelegt (weder in der vorliegenden NPA, noch in der Verordnung 1008/2008), wie die Übertragung der Aufsicht zu erfolgen hat. Einige Mitgliedsstaaten verlangen hinsichtlich der Aufsichtsübertragung eine Umregistrierung und Eintragung des Luftfahrzeugs in das jeweilige nationale Register (was mit erheblichen Kosten verbunden ist), andere Mitgliedsstaaten bestehen dagegen auf dem Abschluss eines bilateralen Verwaltungsabkommens und wieder anderen Mitgliedsstaaten geben sich mit einer einfachen Übertragung durch Verwaltungsakt zufrieden. Hier wäre eine einheitliche Regelung im Hinblick auf die Rechts- und Planungssicherheit wünschenswert.
- In diesem Zusammenhang möchten wir auch darauf hinweisen, das die inzwischen aufgehobene Verordnung 2407/92 in Artikel 8 einige Erleichterungen beinhaltet hat, welche in der jetzigen Verordnung 1008/2008 nicht mehr enthalten sind (z.B. Ausnahme von der Umregistrierung, wenn dadurch bauliche Veränderungen am Luftfahrzeug nötig würden, wenn es sich um Leasingverträge mit kurzer Laufzeit oder zur Deckung eines kurzfristigen Bedarfs handelt oder unter sonstigen außergewöhnlichen Umständen). Wir regen diesbezüglich an, diese Erleichterungen wieder mit aufzunehmen.

(3.) Compliance with the essential requirements and applicable implementing rules may be demonstrated by applying the procedures contained in the operations manual of the lessor.

**Comment:**

The requirement for TCO approval is not in line the EU Third Package Legislation (Regulation (EC) 1008/2008), as recently adopted by the EU Legislator,, which refers to approval by the National Aviation Authority (not EASA). Taking into account the fact that wet-leasing is mostly required at short notice to cover for short-term needs,, approval by NAAs is more practical (EASA is not equipped to deal with short-term needs/ operational approvals). In addition, the AEA is concerned about the level of fees that EASA will impose for such approvals under the TCO.

In addition, the EASA rulemaking proposal imposing the full implementing rules provisions on wet—lease (para (b) (2) and (3)) will make wet-leasing from non-EU airlines de-facto impossible (due to different regulatory environment etc) even from countries with similar safety levels such as the USA, Canada, etc. This is also in contradiction the EU Third Package Legislation (Regulation (EC) 1008/2008), which refers to equivalent level of safety (not identical safety rules). There is no safety justification for those additional restrictions imposed by EASA whereas it will reduce the access of EU airlines to wet-lease capacity. This is unacceptable.

**Proposal:**

Re-align the wet-lease requirements with the provisions recently agreed by the EU legislator under the third package (Regulation (EC) 1008/2008, Article 13) which refer to equivalent safety rather than identical safety rules and which requires NAA approval instead of approval by EASA.

Therefore para (b) should be replaced with:

Wet Lease In:

A community air carrier wet leasing aircraft registered in a third country from another undertaking, shall obtain prior approval for the operation from the competent licensing Authority. The Competent Authority may grant approval if the community air carrier demonstrates to the satisfaction of the competent Authority that all safety standards equivalent to those imposed by Community or national law are met.

Any Lease-In (a):

**Comment:**

The phrase "Authorisation" is used in place of "Approve".

Third Country operators require a "third country operator authorisation" (Part TCO).

**Wet Lease-In:**

The requirements for Operators to wet lease-in third country aircraft is very onerous. Numerous regulations are required to be complied with. OR.OPS.025.FTL requires a Fatigue Risk Management System (FRMS) to be in place, guidance is needed from EASA/EU on the implementation of FMRS for Community operators.

There does not seem to be an equivalent to ACJ OPS 1.165(b)(2).

comment by: DGAC

## WET LEASE-IN

The use of two sets of requirements (ICAO Annex 6 through TCO authorisation + ER&IROPS) may be burdensome with no added safety benefit. Conformity to

ER&IR-OPS should imply conformity with ICAO Annex 6 and therefore TCO authorisation should not be mandatory in the case wet lease-in

comment 3131 comment by: DGAC

WET LEASE-IN

What is the duration for the authorisation issued by the authority? EASA should develop provisions for duration, suspension, etc... of such authorisation.

comment 3133 comment by: DGAC

EASA should develop means to help the authority in assessing the conformity to (b)(2) and (b)(3), such as audit check-lists.

**(b)(2)** : "excluding OPS.CAT.220.A if authorised by the state of the operator"  
: there is no such § OPS.CAT.220.A in Part OPS...

comment 3134 comment by: DGAC

DRY LEASE-OUT

(d)(1) :

**Proposal** : amend the text as follows :

"(1) the competent authority has transferred its responsibilities for oversight of operations ~~and maintenance~~ to the competent authority of the lessee **and an arrangement has been concluded that establishes the share of responsibility for the maintenance**"

**Justification** : In case no ICAO 83 bis arrangement has been concluded between the authority of the lessor and the authority of the lessee, the responsibility for the maintenance of the aircraft remains within the authority of the state of registry.

comment 3334 comment by: Ryanair

The proposal does not appear to take account of wet lease-in from a Community operator (including at short notice/immediate requirement)

(b)(1) - Reference to Part TCO must be removed pending the publication of an NPA to address third country operators - in the interim we reserve our position

Paragraph (B) requires a full review (perhaps in the context of Part TCO). It is difficult to see how an operator could wet lease in from a third country operator in accordance with the current proposed requirements of OR.OPS.030.AOC.

comment 3348 comment by: FNAM (Fédération Nationale de l'Aviation Marchande)

**Comment**

This is not acceptable to comment on leasing without knowing Part-TCO content as the text mentions it directly.

**Proposal**

There must a possibility to comment Part TCO and NPA 2009-02 at the same

time.

**Justification**

Justification is obvious, as we are not aware of Part TCO, we cannot decide if this article is uncertain or advantageous.

comment 3349 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

Wet-leasing is usually a short-term solution due to operational constraints, approval by NAAs would more fit to operators needs, as EASA may not be able to deal with short-term issues.

**Proposal**

Regulation 1008/2008 must be taken into account and especially Article 13 "Community air carriers may freely operate wetleased aircraft registered within the Community except wherethis would lead to endangering safety". This regulation allows more flexibility which is not the case with EASA requirements that would make wet-leasing for non-EU operators almost impossible.

**Justification**

Obvious

comment 3350 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment:**

According to 1008/2008 art 13.2, wet lease-in is subject to prior approval. There is no clear statement about the requirements to get approval for wet lease-in between Community Member State. As all Member State are working on the same rule, the approval should not be subject to local appreciation of the national authority about what has to be done to get the approval. Every carrier of the Community is working against the same standards. The approval process should be simple and the same for every Community Member carriers and states.

comment

3624

comment by: *TNT Airways*

**Comment:**

This paragraph does not cover for the wet lease at short notice in case of unforeseen, urgent and immediate need for a replacement aircraft.

**Proposal:**

Review the text to add criterias as it was published in JAA TGL 44 AMC 1.165 with the exception that the criteria about the FTL in this AMC were not practical and realistic.

e.g. : Community Member States have their own deviations granted under subpart Q and controlled by national CAA to ensure the required level of safety is ensured. It is not realistic to require that the lessor FTL have to be applied if the lessee's one are more permissive. We speak here about unforeseen replacement of aircraft limited in time...

comment 3679

comment by: AIR FRANCE

The NPA TCO is not available, it is therefore difficult to give comments on that part of the proposed text. Wet-leasing is mostly required at short notice to cover for short-term needs, approval by NAAs is then more practical.

The NPA text impose the full implementing rules provisions on wet—lease. This will make wet-leasing from non-EU airlines de-facto impossible (due to different regulatory environment etc). This seems to be in contradiction the EU Third Package Legislation (Regulation (EC) 1008/2008), which refers to equivalent level of safety. It will reduce the access of EU airlines to wet-lease capacity

Proposal:

Re-align the wet-lease requirements with the provisions recently agreed by the EU legislator under the third package (Regulation (EC) 1008/2008) which refer to equivalent safety rather than identical safety rules.

Therefore para (b) should be replaced with:

**C. III. Draft Opinion Part-OR - Subpart OPS - Section IV - OR.OPS.035.AOC  
Code share arrangements**

p. 11

comment

635

comment by: AEA

**Relevant Text:**

(b) To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an authorisation in accordance with PartTCO.

(2) The Community operator conducts an initial onsite audit and for the duration of the code share arrangement regular audits of the third country operator to ensure compliance of the third country operator with the essential requirements of the Basic Regulation and the standards maintained by that operator in conducting its operations; Onsite audits shall be conducted at least once every 24 months.

**Comment:**

There should not be a requirement for TCO approval taking into account the fact that most code-share partners do not fly to the EU. Therefore it seems excessive to require TCO approval in addition to imposing an audit by community operator. The IATA IOSA system should be sufficient to authorize code-share arrangements.

In addition, in order to avoid an inflation of audits which would be costly and unnecessary, community operators should be allowed to rely on the IATA IOSA audit for compliance with this regulation rather than being required to do their own audits (which would be similar to the FAA allowing US airlines to rely on IOSA for the FAA code share audit requirements).

**Proposal:**

Delete (b) (1)

For (b)(2) make reference to IOSA audits.

comment

642

comment by: AEA

**Relevant Text:**

(b)(2) ... Onsite audits shall be conducted at least every 24 months

**Comment:**

It seems excessive to put this requirement into the hard-law (implementing rules). This could lead to problems (need to ask for a formal exemption from EU law) to continue code-share arrangement if the audit is delayed and is not done after the 24 month period. This proposal is contrary to EASA's performance based rule making concept.

**Proposal:**

The requirement specifying the time-frame for on-sight audits should be put into AMC (soft law) and it should recognize the IATA IOSA system (in-stead of on-sight audits by the community operator) in order to avoid an inflation of audits

comment

643

comment by: AEA

**Relevant Text:**

The Community operator conducts an initial audit... at least every 24 months

**Comment:**

In the OR.OPS.035 the term onsite audits is used and in the AMC the general term audits is used. We propose to move the audit pooling methodology from the AMC to the OR.OPS.035.AOC (b) (2) as a third bullet. The reason is that the advantage of audit pooling needs to be clearly described in the law. The intention must be two way: 1) if you don't participate in an audit pooling system, onsite audits should be the methodology for assessing code share partners as described in item (b)(2)

2) if you do participate in an audit pooling system (such as IOSA) this should be sufficient

**Proposal:**

Move the audit pooling system (which needs to recognise IOSA) from AMC to the IR and allow it as alternative to individual airline onsite audits

comment

644

comment by: AEA

**Relevant Text:**

(b)(2).. to ensure compliance with of the third country operator with the essential requirements of the Basic Regulation

**Comment:**

This will make code-sharing with most non-EU airlines de-facto impossible due to different regulatory environments (f.e. US airlines). This has no safety justification and is completely unacceptable to AEA. It goes beyond the mandate which was given to EASA by the EU legislator. ICAO standards or equivalent should be sufficient to authorize a code-share

**Proposal:**

Delete the reference to the essential requirements of the basic regulation and replace it with 'ICAO standards or equivalent'

comment

645

comment by: AEA

**Comment:**

EU-OPS did not cover code-share arrangements. There is no sound safety justification for introducing those new requirements into EU law. In addition, no Regulatory Impact Assessment has been developed by EASA

EASA's reference to the basic regulation is flawed and based on a subjective and biased interpretation of EU law which is not in line with the intentions of the EU legislator. The AEA notes that the EASA Management Board has expressed similar concerns on those new requirements.

**Proposal:**

Realign with EU-OPS and reconsider the reference to code-share arrangements

comment 646

comment by: AEA

**Relevant Text:**

*(a) Any code share arrangement between an operator certified in accordance with this section (community operator) and a third country operator shall be subject to prior authorisation of the competent Authority*

**British Airways Response to EASA NPA - O R.OPS.035.AOC Codeshare arrangements.**

British Airways is currently considering its position on the EASA NPA on OPS.

I would like to deal with the British Airways response to the specific part of the NPA - OR.OPS.035.AOC Codeshare arrangements.

"OR.OPS.035.AOC Code share arrangements

(a) Any code share arrangement between an operator certified in accordance with this section (community operator) and a third country operator shall be subject to prior authorisation of the competent authority.

***BA Comment: In principle this appears a reasonable position.***

(b) To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an authorisation in accordance with Part

TCO.

(2) The Community operator conducts an initial onsite audit and for the duration of the code share arrangement regular audits of the third country operator to ensure compliance of the third country operator with the essential requirements of the Basic Regulation and the standards maintained by that operator in conducting its operations; Onsite audits shall be conducted at least once every 24 months.

**BA Comment: If we understand this correctly then EASA is requiring non-EU operators (ie. EASA Part 129 Operators) to conform with the EASA Basic Regulation. We therefore assume that this would then include issues such as FTL and Cabin Crew Attestation which would set a very bad precedent for all EU operators, since the affected State (say the USA FAA), would doubtless then require the same in return. [NOTE: The USA and EU FTL schemes are not compatible!]**

**BA Comment: We should also seek to minimize any additional auditing requirement by pushing for EASA to accept the IATA IOSA audit programme to meet the regulatory requirement (this may not be possible since EASA will argue it is an airlines individual responsibility, but EASA does put credence behind IOSA and this would be a useful benefit both to operators and to the regulator).**

**BA Comment: In principle the audit activity requirement appears a reasonable position, however it needs to be clear whether "any codeshare" includes alliances and franchises. If we assume that is the case, how does EASA propose to deal with a global alliance such as oneworld, which contains a number of Community operators. This rule implies that all the Community operators [British Airways, Iberia, Finnair and Malev], would need to all independently audit all the third country operators in the group that they codeshare with. The third country operator would therefore be audited by each airline to the same standard within the EASA requirement (each providing a report to EASA as required below), audited by their own regulatory authority and audited to IATA IOSA standards. We should also seek to minimize any additional auditing requirement by pushing for EASA to accept the IATA IOSA audit programme to also meet the regulatory requirement (EASA has already put credence behind IOSA and this would be a useful benefit both to operators and to the regulator and deliver the principle in this proposal.**

**BA Comment: The different regulatory requirements in other countries do not make it easy to measure standards directly against the Basic Regulation, however the IATA IOSA audit is internationally recognized and will deliver an "equivalent" level of compliance with the Basic Regulation as far as safety is concerned.**

(c) The audits, including any findings shall be recorded. Level 1 findings shall be closed before entering in or continuing a code share agreement, level 2 findings within 12 months of the audit. The Community operator shall submit the audit report including findings and their closure to the competent authority. All audit reports shall be kept for at least 5 years."

**BA Comment: This proposal may be detrimental to safety and safety oversight and have an adverse effect to that intended. BA could raise a Level 1 finding against one of our codeshares in the EU (i.e. a**

*Community operator) and there is nothing to stop it flying or us codesharing with that operator. However BA could raise the same Level 1 finding against the third country codeshare operator and as result have to cease our codeshare operations immediately until the item is closed. This proves that it cannot be safety driven and it is likely that auditors will be under pressure and likely to downgrade findings when possible rather than upgrade findings to Level 1 when possible as such action would prevent codeshare operations. In fact any Community operator could audit itself and have a Level 1 finding yet continue to fly [BA current rules would allow this for up to 7 days depending on severity], but our codeshare partner would not allowed to do so as a codeshare!*

*BA Comment: What happens in the event that one of the other Community operators codesharing with the same third country operator as BA, conducts an audit and uncovers a Level 1 finding? This would mean that they would have to stop the codeshare, but BA would continue as it would not be aware until the report and closure progressed through EASA.*

*BA Comment: A Level 2 finding should not remain open for a period as long as 12 months.*

In general British Airways have found it difficult to understand what safety benefit is added to codeshare operations by this rule. Where mutual recognition is in the bilateral we should not require any additional requirements to be imposed by EASA as they just add cost and do not improve safety.

British Airways propose a revised version of OR.OPS.035.AOC Codeshare arrangements as below:

**OR.OPS.035.AOC Code share arrangements – BA Proposal.**

(a) Any code share arrangement between an operator certified in accordance with this section (community operator) and a third country operator shall be subject to prior authorisation of the competent authority.

(b) To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an authorisation in accordance with Part TCO.

(2) The Community operator conducts an initial safety audit and for the duration of the code share arrangement conducts safety oversight of the third country operator to ensure the safety standards maintained by that operator in conducting its operations are equivalent to those required by IOSA standards. Safety oversight shall be conducted at least once every 12 months.

(b) The Community operator shall submit details of their safety oversight policies to the competent authority. The safety oversight activity or any safety audits conducted, including any findings shall be recorded. Level 1 findings shall be closed before entering in a code share agreement, level 2 findings within 2 months of any audit. The Community operator shall at the request of the competent authority submit the details of the safety oversight conducted and

any audit reports, including findings and their closure to the competent authority. All audit reports shall be kept for at least 5 years."

Rod Young  
Head of Aviation Safety  
British Airways.

**Relevant Text:**

(b)To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an authorisation in accordance with PartTCO.

(2) The Community operator conducts an initial onsite audit and for the duration of the code share arrangement regular audits of the third country operator to ensure compliance of the third country operator with the essential requirements of the Basic Regulation and the standards maintained by that operator in conducting its operations; Onsite audits shall be conducted at least once every 24 months.

**Comment:**

There should not be a requirement for TCO approval taking into account the fact that most code-share partners do not fly to the EU. Therefore it seems excessive to require TCO approval in addition to imposing an audit by community operator. The IATA IOSA system should be sufficient to authorize code-share arrangements.

In addition, in order to avoid an inflation of audits which would be costly and unnecessary, community operators should be allowed to rely on the IATA IOSA audit for compliance with this regulation rather than being required to do their own audits (which would be similar to the FAA allowing US airlines to rely on IOSA for the FAA code share audit requirements).

**Proposal:**

Delete (b) (1)

For (b)(2) make reference to IOSA audits.

comment 1494

comment by: TAP Portugal

**Relevant Text:**

(b)(2) ... Onsite audits shall be conducted at least every 24 months

**Comment:**

It seems excessive to put this requirement into the hard-law (implementing rules). This could lead to problems (need to ask for a formal exemption from EU law) to continue code-share arrangement if the audit is delayed and is not done after the 24 month period. This proposal is contrary to EASA's performance based rule making concept.

**Proposal:**

The requirement specifying the time-frame for on-sight audits should be put into AMC (soft law) and it should recognize the IATA IOSA system (in-stead of on-sight audits by the community operator) in order to avoid an inflation of audits

comment 1495

comment by: TAP Portugal

**Relevant Text:**

(b)(2).. to ensure compliance with of the third country operator with the essential requirements of the Basic Regulation

**Comment:**

This will make code-sharing with most non-EU airlines de-facto impossible due to different regulatory environments (f.e. US airlines). This has no safety justification and is completely unacceptable to AEA. It goes beyond the mandate which was given to EASA by the EU legislator. ICAO standards or equivalent should be sufficient to authorize a code-share

**Proposal:**

Delete the reference to the essential requirements of the basic regulation and replace it with 'ICAO standards or equivalent'

comment

The Community operator conducts an initial audit... at least every 24 months

**Comment:**

In the OR.OPS.035 the term onsite audits is used and in the AMC the general term audits is used. We propose to move the audit pooling methodology from the AMC to the OR.OPS.035.AOC (b) (2) as a third bullet. The reason is that the advantage of audit pooling needs to be clearly described in the law. The intention must be two way: 1) if you don't participate in an audit pooling system, onsite audits should be the methodology for assessing code share partners as described in item (b)(2)

2) if you do participate in an audit pooling system (such as IOSA) this should be sufficient

**Proposal:**

Move the audit pooling system (which needs to recognise IOSA) from AMC to the IR and allow it as alternative to individual airline onsite audits

*OR.OPS.035.AOC, Code share arrangements*  
*Para (b)(1) and (b)(2)*  
*Page 11 of 136*

**BOEING COMMENT:**

The requirement for a non-community operator to hold an EASA authorization and be subject to audits confirming this is inconsistent with global rules, especially associated with code sharing.

**JUSTIFICATION:** This proposed requirement is beyond EASA's control and is above ICAO requirements, while the EASA NPA on Third Country Operators is not yet published. The proposed code share arrangement requirements are costly, inefficient, and have no safety justification.

comment

comment by: *Walter Gessky*

**1. OR.OPS.035.AOC Code share arrangements  
Shall be deleted.**

Justification:

Art 4.1(c) was agreed on the assumption that this covers "leasing agreements" and not "code sharing agreements. No mandate for the COM in the basic regulation to regulate code share in this IR, because this is also not regulated in EU-OPS.

(b)(2).. to ensure compliance with of the third country operator with the essential requirements of the Basic Regulation

**Comment:**

This requirement, if implemented, would make code-sharing with most non-EU airlines a *de facto* impossibility, owing to different regulatory environments in other states (eg the USA). This proposal has no safety justification and is completely unacceptable to British Airways. It is one of the most contentious measures which EASA has introduced in NPA 2009-2 and demonstrates just how far the Agency's views have diverged from common practice. It also goes beyond the mandate which was given to EASA by the EU legislator.

EU-OPS did not cover code-share arrangements. There is no sound safety justification for introducing this new requirement into EU law. In addition, no Regulatory Impact Assessment has been developed by EASA. EASA's reference to the Basic Regulation is flawed and based on a subjective interpretation of EU

law which is not in line with the intentions of the EU legislator. The AEA notes that the EASA Management Board has expressed similar concerns on those new requirements.

**Proposal:**

Delete this proposal *in toto*.

**General Comment:**

NPA 2009-2 in its entirety is unfit for the purpose for which it is intended and must be withdrawn and reconsidered.

General

An aircraft of the code share partner of a community operator is not being 'used' by the community operator as intended under Article 4 of the Basic Regulation. As they are not being used by the community operator, they are not in scope of the Regulation unless they are flying to the Community and are covered by the requirements on third-country operators.

Paragraph (b)(1)

Code share agreements may be entered into with operators which do not operate to the EU. Such operators do not come within the scope of Article 4 of the Basic Regulation and therefore will not hold and should not be required to hold an authorisation under Part-TCO.

Proposed text for OR.OPS.AOC.035(b)(1): The third country operator holds an authorisation in accordance with Part TCO if it operates services into the Community.

Paragraph (b)(2)

The audit requirements are disproportionate and could lead excessive intra airline auditing which will have no safety benefits. While the AMC states that the internationally recognised 3<sup>rd</sup> party audits may be used this does not tie up with the rule which states that the Community operator must conduct the audit. Again the AMC material states the pooling of audits between Community Operators is acceptable but this is not in line with the requirements of the rule. The AMC also states that where audits are pooled Community operators should still conduct an audit every 24 months. This would still lead to excessive auditing where more than two Community operators code share with a third country operator.

Proposed text for OR.OPS.AOC.035(b)(2): The Community operator shall ensure that an appropriate audit of the third country operator is conducted before the commencement of the code share arrangement and regularly thereafter for the duration of the arrangement. The purpose of the audit is to ensure compliance .....

(b)To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an authorisation in accordance with PartTCO.

(2) The Community operator conducts an initial onsite audit and for the duration of the code share arrangement regular audits of the third country operator to ensure compliance of the third country operator with the essential requirements of the Basic Regulation and the standards maintained by that operator in conducting its operations; Onsite audits shall be conducted at least once every 24 months.

**Comment:**

There should not be a requirement for TCO approval taking into account the fact that most code-share partners do not fly to the EU. Therefore it seems excessive to require TCO approval in addition to imposing an audit by community operator. The IATA IOSA system should be sufficient to authorize code-share arrangements.

In addition, in order to avoid an inflation of audits which would be costly and unnecessary, community operators should be allowed to rely on the IATA IOSA audit for compliance with this regulation rather than being required to do their own audits (which would be similar to the FAA allowing US airlines to rely on IOSA for the FAA code share audit requirements).

**Proposal:**

Delete (b) (1)

For (b)(2) make reference to IOSA audits.

(b)(2) ... Onsite audits shall be conducted at least every 24 months

**Comment:**

It seems excessive to put this requirement into the hard-law (implementing rules). This could lead to problems (need to ask for a formal exemption from EU law) to continue code-share arrangement if the audit is delayed and is not done after the 24 month period. This proposal is contrary to EASA's performance based rule making concept.

**Proposal:**

The requirement specifying the time-frame for on-sight audits should be put into AMC (soft law) and it should recognize the IATA IOSA system (in-stead of on-sight audits by the community operator) in order to avoid an inflation of audits

comment 2883 comment by: *Swiss International Airlines / Bruno Pfister*

**Relevant Text:**

The Community operator conducts an initial audit... at least every 24 months

**Comment:**

In the OR.OPS.035 the term onsite audits is used and in the AMC the general term audits is used. We propose to move the audit pooling methodology from the AMC to the OR.OPS.035.AOC (b) (2) as a third bullet. The reason is that the advantage of audit pooling needs to be clearly described in the law. The intention must be two way: 1) if you don't participate in an audit pooling system, onsite audits should be the methodology for assessing code share partners as described in item (b)(2)

2) if you do participate in an audit pooling system (such as IOSA) this should be sufficient

**Proposal:**

Move the audit pooling system (which needs to recognise IOSA) from AMC to the IR and allow it as alternative to individual airline onsite audits

comment 2884 comment by: *Swiss International Airlines / Bruno Pfister*

**Relevant Text:**

(b)(2).. to ensure compliance with of the third country operator with the essential requirements of the Basic Regulation

**Comment:**

This will make code-sharing with most non-EU airlines de-facto impossible due to different regulatory environments (f.e. US airlines). This has no safety justification and is completely unacceptable to AEA. It goes beyond the mandate which was given to EASA by the EU legislator. ICAO standards or equivalent should be sufficient to authorize a code-share

**Proposal:**

Delete the reference to the essential requirements of the basic regulation and replace it with 'ICAO standards or equivalent'

comment 2885 comment by: *Swiss International Airlines / Bruno Pfister*

**Comment:**

EU-OPS did not cover code-share arrangements. There is no sound safety justification for introducing those new requirements into EU law. In addition, no Regulatory Impact Assessment has been developed by EASA

EASA's reference to the basic regulation is flawed and based on a subjective and biased interpretation of EU law which is not in line with the intentions of the EU legislator. The AEA notes that the EASA Management Board has expressed similar concerns on those new requirements.

**Proposal:**

Realign with EU-OPS and reconsider the reference to code-share arrangements

comment 2886 comment by: *Swiss International Airlines / Bruno Pfister*

comment by: DGAC

Many countries such as France consider that compliance with IOSA standards is satisfactory for code share as it is a proof of conformity to ICAO standards. Is IOSA certification enough to prove both the conformity to TCO standard and to ER-OPS ?

comment

3138

comment by: DGAC

What is the level expected to obtain a TCO authorisation ?

As a general comment, we would say that it is kind of difficult to comment on OR.OPS.030.AOC Leasing and OR.OPS.035.AOC Code share arrangements without any clue on what NPA TCO will be.

comment

3309

comment by: Association of Asia Pacific Airlines

Comments hereafter address OR.OPS.035.AOC Code Share arrangements para (a), (b), and (c)

This regulatory proposal goes beyond standard international regulatory practice and does not look towards harmonisation of international regulatory requirements.

It is understood EASA plans to introduce for consultation a NPA for Third Country Operators which is a proposed authorization for Non EU carriers to operate to Europe. We therefore consider this requirement for Code Share operations cannot be addressed until the respective NPA for TCO is made available for comment.

In addition the current wording proposed requires Non EU carriers who do not operate to the EU but have a code share agreement with an EU carrier are required to hold a CO approval and the imposition of an audit on a bi-annual basis.

This proposal is extraterritorial and does not promote harmonisation with other regulatory code share requirements in fact it introduces a divergence in

international harmonisation and requirements.

With regard to bi-annual audits the majority of the world's carriers are IOSA compliant. The FAA have recognised the benefit of IOSA and have waived audit requirements for code share agreements with US carriers for those carriers who are IOSA approved.

We strongly propose  
Delete (b) (1)

Revise (b) (2) - identify IOSA registration and audits are an acceptable alternative means of compliance

comment 3351 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

This is not acceptable to comment on code-share arrangements without knowing Part-TCO content as the text mentions it directly.

**Proposal**

There must a possibility to comment Part TCO and NPA 2009-02 at the same time.

**Justification**

Justification is obvious, as we are not aware of Part TCO, we cannot decide if this article is uncertain or advantageous.

comment 3353 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

Most code-share agreements are with airlines not flying within EU, part TCO will lead to too many constraints. Moreover code share was not part of EU-OPS and EASA did not make any RIA on this issue.

**Proposal**

IATA IOSA certification and ICAO standards should be sufficient and substitutes to Part TCO for code share agreements.

**Justification**

obvious

comment 3354 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

The proposal for audits conducted at least every 24 months is too rigid. This will lead to cost increment for operators. IOSA audits should be sufficient for guaranting safety level.

**Proposal**

IATA IOSA certification and ICAO standards should be sufficient and substitutes to Part TCO for code share agreements.

**Justification**

obvious

comment 3355 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

Insuring compliance of third country operator with essential requirements of the Basic Regulation will make code-sharing impossible. There are very different regulations regarding countries that have equivalent level of safety with Europe without complying with Basic Regulation 216/2008.

**Proposal**

Once again IATA IOSA and ICAO standards should be sufficient for code share agreements. The reference to "essential requirements" should be deleted.

**Justification**

obvious

comment

3940

comment by: *FAA***1. OR.OPS.035.AOC Code share arrangements**

*Comment:*

The proposed regulation indicates:

(a) Any code share arrangement between an operator certified in accordance with this section (community operator) and a third country operator shall be subject to prior authorisation of the competent authority.

(b) To obtain an authorisation to enter into a code share arrangement with a third country operator, the community operator shall demonstrate to the competent authority that:

(1) The third country operator holds an **authorisation in accordance with Part TCO**.

This section addresses concern that code share partners, including third country carriers beyond the first destination, meet minimum levels of safety. The FAA shares EASA's philosophy in this regard. However, the key to the provision is the method of authorization. Since these details will be defined in EASA's Third Country Operator NPA (OPS.004) that is scheduled for publication in September 2009, it is not possible to comment at this time.

Introduce a requirement for flight data monitoring for non-commercial operators of complex motor-powered aircraft.

comment 1862

comment by: *Southern Cross International*

For operators only performing occasional ferry flights or test flights for MRO providers and leasing companies, maintaining a flight data monitoring system, which shall be integrated in the management system, is not practicable and would be extremely difficult taking into consideration the short period of time for which those aircraft are operated (occasionally only one flight).

Also the infrequent nature of such operations with a wide variety of aircraft, and the fact that the majority of our crews are employed on a contract per flight basis, means that any data collected would be too small a sample to effectively assess whether the objectives of the flight data monitoring system are being met

comment 2055

**Relevant Text:**

*(a) The operator shall, in accordance with OR.GEN.210(b) nominate postholders responsible for the management and supervision of the following areas (1) flight operations (2) crew training (3) ground operations and (4) compliance monitoring.*

**Comment:**

The maintenance postholder is missing. It is our understanding that this is covered through Part-M but this is unclear from this paragraph

Compliance is only one aspect of quality. We therefore suggest to re-introduce the EU-OPS terminology of quality manager. The quality manager should not be one of the postholder and therefore the term postholder should be avoided for this function.

**Proposal:**

Realign with the EU-OPS terminology/definition of the postholders and quality manager

comment 699

comment by: *Civil Aviation Authority of Norway*

The requirement for the Nominated Postholders to be accepted by the Competent Authority seems to be lost compared to EU-OPS 1.175 (i) and JAR-OPS 3.175 (i).

We find this to be an undesired weakening of the Competent Authority's oversight over the operators. The acceptance of NPs serves as a safeguard against appointing inexperienced/unsuitable candidates for the position (which could possibly have a negative impact on flight safety). We therefore strongly suggest to maintain the requirement for such acceptance as in EU-OPS 1.175 (h) and JAR-OPS 3.175 (h), and/or specify the criteria/qualifications etc. that should be taken into account when such an acceptance is made.

Considering that OR.OPS.015.AOC (b) requires the operator to provide information about the NPs qualifications and experience, and that AMC 3 AR.GEN.330 (last sentence) mentions the acceptability of NPs, the removal of the requirement for acceptability in OR.OPS.210.AOC seems to be inconsistent.

comment 1182

comment by: *Austro Control GmbH*

The management area of compliance monitoring does not match with the implementation requirements for SMS according Annex 6. Compliance monitoring shall be a part of the operator's SMS.

comment by: Lufthansa CityLine GmbH

**Proposal:**

(a) The operator shall, in accordance with OR.GEN.210(b)

**(I)** nominate Post Holders responsible for the management and supervision of the following areas:

- (1) flight operations;
- (2) crew training;
- (3) ground operations; and
- (4) the maintenance system

(details see VO xyz Part xyz)

**and**

**(II)** designate one Quality Manager to monitor compliance with, and adequacy of, procedures required to ensure safe operational practices and airworthy aeroplanes.

**and**

**(III)** designate one Safety Manager responsible for an organisation-wide implementation of an safety management system (SMS) acc. ICAO. This SMS uses the principles of the accident prevention and flight safety programme and must be in accordance with the State Safety Program.

Exception A

If acceptable to the Authority

(depending on size and/or kind of operation, e.g. for small/very small operators):

- one or more of the Nominated Post Holder responsibility may be filled by the Accountable Manager itself,

and/or

- one or more of the Nominated Post Holder responsibility may be filled by one direct report of the Accountable Manager

Exception B

If acceptable to the Authority

(depending on size and/or kind of operation, e.g. for small / very small operators):

- posts of the Accountable Manager and the Quality Manager may be combined if independence of the quality audits is granted. (in this case

the independence concerning the quality audits must be granted by independent auditors)

and/or

- posts of the Accountable Manager and the Safety Manager may be combined

or

- posts of the Quality Manager and the Safety manager may be combined if independence of the quality audits is granted. (in this case the independence concerning the auditing of the SMS must be granted by acceptable procedures)

#### **Explanatory statement A:**

**It is eminent important not to merge the terms of Nominated Post Holder and Compliance Manager, who is following designated as Quality Manager for better understanding.**

#### **Summary:**

In that well known and approved so called "NPH System" there is made a clear difference between the responsibilities of the Accountable Manager and the Nominated Post Holders respectively on one hand (line management) and the duty of the Quality Managers on the other hand (check view). One common point is that all of them are direct reports to the Accountable Manager. One further common point is that all of them (incl. the Accountable Manager) must be acceptable to the Authority

(By the way, to be acceptable to the Authority apply to much more personnel working for an Airline Operator or an Maintenance Organisation, even if there are not nominated/designated via form4 or equivalent.)

The difference between Post Holders and Quality Manager is mandatory to underline and secure the independence of the quality system. This basic understanding is expressed by comparing EU-OPS 1.175 / JAR-OPS 3.175 and TGL 44 1.035 (2.4.5) where in case of small/very small operators one or more of the nominated posts may be filled by the Accountable Manager, if acceptable to the Authority, **or** the posts of the Accountable Manager and the Quality Manager may be combined respectively under particular circumstances. (e.g.: quality audits have to be done by independent personnel)

**But to secure the Quality Managers independence even for the Accountable Manager it is never ever allowed to fill additional the posts of Nominated Post Holder and Quality Manager at the same time.**

**Due to that major difference, EASA should never ever use the Term Post Holder (Nominated Post holder) for an other position as used in the well known and approved "NPH-System" acc. EU-OPS / JAR-OPS 3.**

Beside the explanation in advance EASA has to be aware not to open the gate for an expansion of further Post Holder positions (e.g. security, emergency, cosmic radiation, etc.)

#### **Sources:**

##### **EU-OPS 1.175(h) / JAR-OPS 3.175(h)**

The operator must have nominated an Accountable Manager acceptable to the Authority who has corporate authority for **ensuring that all operations and maintenance activities can be financed and carried out** to the standard required by the Authority.

**EU-OPS 1.175(i) / JAR-OPS 3.175(i)**

The operator must have nominated Post Holders, acceptable to the Authority, who are **responsible for the management and supervision** of the following areas:

1. flight operations;
2. the maintenance system;
3. crew training; and
4. ground operations."

**EU-OPS 1.175 / JAR-OPS 3.175**

(j) A person may hold more than one of the nominated posts if acceptable to the Authority but, for operators who employ 21 or more full time staff, a minimum of two persons are required to cover the four areas of responsibility.

(k) For operators who employ 20 or less full time staff, one or more of the nominated posts may be filled by the Accountable Manager if acceptable to the Authority.

**EU-OPS 1.035 / JAR-OPS 3.035**

Quality system

(a) An operator shall establish one quality system and designate one Quality Manager **to monitor compliance with, and a adequacy of, procedures** required to ensure safe operational practices and airworthy aeroplanes. Compliance monitoring must include a feed-back system to the Accountable Manager (see also OPS 1.175 (h)) to ensure corrective action as necessary."

**TGL 44 1.035**

2.4.2 The primary role of the Quality Manager is to verify, by **monitoring activity in the fields of flight operations, maintenance, crew training and ground operations**, that the standards required by the Authority, and any additional requirements defined by the operator, are being carried out under the supervision of the relevant Nominated Post Holder.

2.4.3 The Quality Manager should be responsible for ensuring that the Quality Assurance Programme is properly established, implemented and maintained.

2.4.4 The Quality Manager should:

- a. Have direct access to the Accountable Manager;
- b. Not be one of the Nominated Post Holders; and
- c. Have access to all parts of the operator's and, as necessary, any sub-contractor's organisation.

2.4.5 In the case of small/very small operators (see paragraph 7.3 below), the posts of the Accountable Manager and the Quality Manager may be combined. However, in this event, quality audits should be conducted by independent personnel. In accordance with paragraph 2.4.4.b above, it will not be possible for the Accountable Manager to be one of the Nominated Post Holders."

**Explanatory statement B:**

Concerning the roles of Safety Management- / Post Holder Responsibility and Quality Management (Compliance Management).

The Safety Managers responsibility is to implement organisation-wide an SMS (based on the Accident Prevention and Flight Safety Program) on behalf of the Accountable Manager. With the help of this SMS the whole organisation should be able to work with a safety related network, with the help of a Safety Review Board, a Safety Action Group etc., which focuses primarily not on regulatory requirements, but on safety issues.

The Nominated Post Holders have to implement the regulatory requirements concerning operation, which are certainly build up to realise safe operational practices.

Additionally, in being part of the Safety Review Group, they have to implement Safety Management requirements as well.

The Quality Manager has to monitor compliance with, and adequacy of, procedures required to ensure safe operational practices and airworthy aeroplanes. (... related to the regulatory requirements). It is hereby part of the Quality Managers responsibility to ensure the independence of quality audits whether the procedures are compliant and adequacy even concerning the implementation of the SMS.

**Due to that different "perspectives" of the above mentioned Management Positions the most achievable goal concerning safe ty seems to be, when the Quality Management System (Compliance Monitoring Management System) is fully independent from the Safety Management System, the same way as it is independent from the Nominated Post Holders line management as well.**

**In the case, that Safety Management and Quality Management would be leaded by one single person, it is mandatory to ensure the independence of the quality audits. (e. g. with the help of external auditors or a description of internal processes acceptable to the Authority.)**

comment 3369 comment by: *Swedish Transport Agency, Civil Aviation Department (Transportstyrelsen, Luftfartsavdelningen)*

**Paragraph text:**

(a) The operator shall, in accordance with OR.GEN.210(b) nominate post holders responsible for the management and supervision of the following areas:

- (1) flight operations;
- (2) crew training;
- (3) ground operations; and
- (4) compliance monitoring.

**Comment:**

1) In accordance with the present regulation in EU-OPS an operator must have nominated post holders, acceptable to the Authority, who are responsible for the management and supervision of the following areas, Flight operation, the Maintenance system, Crew training and Ground operations. The EASA proposal doesn't mention anything about a person that is responsible for the maintenance system. The maintenance system is one of the most essential parts of an CAT or COM operator. We assume that the responsibility for the maintenance function is regulated in regulation (EC) 2042/2003 as amended. But as the proposed regulation is seen from the operator perspective the maintenance function has to be mentioned in the proposal for safety reasons.

2) The person responsible for the compliance monitoring is not a nominated post holder. There might be a risk of confusion as to whether the function as "nominated post holder compliance monitoring" is in the same production line as the other nominated post holders.

**Proposal:**

- 1) Add a new paragraph containing maintenance system.

2) Regulate the requirements on the person responsible for compliance monitoring in a separate article.

comment by: Henning Romme-Mølby

**Subject:** NPA 2009-02 (c) proposes a changeover in current requirements for Quality Management and Safety Management Systems.

The above mentioned NPA proposes certain organizational changes, which might have an undesired impact on the quality and business principles that operators respect today.

Firstly the NPA proposes that operators should establish a Management System, which seems to be identified to the Safety Management System as the *prevailing system requirement*, with numerous sub functions. An important change is that the Quality Management system no longer is mentioned explicitly, although this system for years has been a significant part of the building blocks for a safe operation.

The Quality Management System is renamed as a "Compliance Monitoring system", which is misleading and raises some concerns. The concept "Compliance Monitoring" can be seen as a substandard norm and produce certain elements of concept misunderstanding, since the audited/reviewed unit might not correlate with such a concept, which will affect the feedback processes. The general understanding of Quality might transform into something perceived (more) negative. Based on this the entire company culture supported by the existing Quality Management system concept could be compromised.

In this context it is important to understand that operators currently have established a Quality Management System – in accordance with applicable regulation – and that this setup goes beyond the mentioned "*Compliance Monitoring concept*" implied by the NPA. Transforming the Quality Management System into Compliance Monitoring could lead to the scenario that the basic core value of Quality Management is lost of sight.

Quality Management is not only Quality Assurance as implied by the change of words in the NPA. Quality Management goes far beyond and the underlying principles should as best practice be applied to all activities, including Safety Management.

Quality is a management tool for achieving business excellence and assure

regulatory compliance, meanwhile the Safety Management system focuses on achieving safety. This is the subject reason for that *both systems are very important* and full benefit is only achieved, when both systems are well established and able to support the operation on a complementary basis. Integration of the systems seems as a more valuable proposal rather than separating the systems indirectly by imposing the "Compliance Monitoring" concept.

***Safety Management needs Quality Management and visa versa.***

It is general accepted - inside and outside aviation – that there are many common points and tasks between Quality Management and Safety Management. This point of view is supported by the enhanced commitment to QHSE (Quality, Health, Safety, Environment) Management Systems.

The concept strategy is that all the mentioned management issues are considered important areas and need special attention being a part of the overall management processes. Typically this involves that a Head of QHSE is nominated, which ensures a clear line of command. In addition it minimizes any form for internal "competition" between the mentioned "soft area" key functions and departments.

Withdrawing Quality Management in the current shape as a direct binding management system requirement from the regulation might be seen a step back for aviation in terms of safety.

Following the implementation of the standards in ICAO DOC 9859 many operators have chosen to combine the Quality Management System with the Safety Management System, or at least they have used the well known existing practices and principles where possible, as suggested by the ICAO.

The forerunner for Safety Management Systems, CAP 712, also implied that there are many common points between Quality and Safety, thus there could be no objection for an integration and mixed setup with a combined postholder for Safety and Quality, ref. CAP 712, section 2.2.

Operators and especially the business industry have gained success by making a combined Quality Management System and Safety Management System in line with the previous mentioned QHSE-concept. Changing the established values of quality does not promote improved safety awareness, nor does it benefit the safety culture. Rather than making the proposed redesign it should be considered to enhance the concept, for example by adding Health and Environment Management to the overall management system requirements.

One of the key elements and advantages achieved by the integration of the management systems is the overall synergy gained. An example could be that auditor(s) can be trained to perform safety audits in conjunction with quality audits, thus enhanced use and benefit of the existing practices can be assured as suggested by the ICAO standards. The somewhat intended separation of the systems and the Quality redesign does not support such efforts.

**Proposal:**

From a regulatory perspective it should be encouraged that operators maintain the Quality Management System and also the Quality Assurance concept by name. Secondly full integration of all management systems should be encouraged. It should be considered acceptable means of compliance that

operators design and integrate all desired management systems into one management system.

The current JAR/EU OPS regulation follows this strategy. Altering applicable requirements by proposing separate systems and imposing a redesign for a key element can hardly be in the interests of safety.

(b) (2) This paragraph should reflect the necessity of experienced flight dispatch personnel forming an essential part of a safe, efficient and economical flight operation.

Therefore the following changes are proposed:

(i) All personnel assigned to flight operation, flight dispatch and ground handling (especially mass and balance) should have state issued licences, which need to be renewed through refresher training on a regular schedule.

(ii) routinely be the subject of proficiency checks.

(iii) should be assigned to training and familiarization with relevant work process close to their own responsibility.

(c) (3)

(i) Supervision of staff requires personnel having shown an above standard responsibility.

(ii) Supervision staff has to be prepared through human factors, team building and additional training.

comment 4087 comment by: *FINNAIR*

(a) The operator shall, in accordance with OR.GEN.210(b) nominate post holders responsible for the management and supervision of the following areas:

- (1) flight operations;
- (2) crew training;
- (3) ground operations; and
- (4) compliance monitoring.

**COMMENT**  
The requirement of post holder system is not adequate.

**PROPOSAL**  
Add; the responsibility for implementation of each applicable requirements must be covered by the post holder system; by one of the post holders. In other words the coverage of the responsibilities must be ensured.

AMC OR.OPS.015.FC (d) Composition of flight crew

INFLIGHT RELIEF OF FLIGHT CREW MEMBERS AEROPLANES

A flight crew member should be considered suitably qualified to relieve another flight crew member of his duties at the controls in flight in the following cases:

1 The pilot in command may delegate the conduct of the flight to another qualified pilot provided the relieving pilot in command:

- a. holds the appropriate type or class rating;
- b. meets the applicable recent experience requirements for pilots in command as specified in FCL.060;
- c. meets the relevant qualifications prescribed in OR.OPS.020.FC, such as minimum level of experience, command course, competence regarding area, route, aerodrome, facilities and procedures; and
- d. meets any other requirements which the operator may have established for that purpose.

And from OR.OPS.020.FC to which it refers in sub para (c):

OR.OPS.020.FC Designation as pilot in command

(a) One pilot amongst the flight crew shall be designated by the operator as pilot in command:

(b) The operator shall only designate a flight crew member to act as pilot in command:

if he/she:

- (1) complies with the minimum level of experience specified in the Operations Manual;
- (2) except in the case of balloons:
  - (i) has adequate knowledge of the route or area to be flown and of the aerodromes, facilities and procedures to be used;
  - (ii) in the case of commercial operations, has had experience within the last 12 months of the route or area to be flown and of the aerodromes, facilities and procedures to be used;
- (3) in the case of multicrew operations, has completed a command course provided by the operator, as specified in the Operations Manual;

**Comment:**

The requirement in OR.OPS.020.FC (3) (to have completed a command course) is far more restrictive than the corresponding EU-OPS paragraph on in-flight relief of flight crew members which allows the PIC to be relieved by another suitable qualified flight crew member which does not need to be a Commander above FL200.

This EASA proposal, which is not line with EU-OPS. neglects decades of safe operations based on the existing rules. It has no safety justification and would lead to an unacceptable increase in crew cost. It will lead to business shifting to non-EU airlines.

**Proposal:**

Realign the in-flight relief requirements for flight crew with the provisions of

EU-OPS (Appendix 1 to EU-OPS.1.940) through a simple copy and paste of the EU-OPS provisions into the corresponding EASA Implementing Rules.

comment 3072 comment by: *ERA*

**European Regions Airline Association Comment**

OPS 1.978 and its Appendix 1 describe the way an Alternative Training and Qualification Program (ATQP) can be approved. They are the result of extensive discussions in the past.

EASA has not reproduced this article nor its Appendix on the grounds of the "built-in" possibility to change any AMC.

ERA acknowledge such possibility, however, the wording of 1.978 and its Appendix could usefully be reproduced in GM as an indication on how to have an AMC approved on that subject. Such incorporation would avoid losing track of OPS 1.978 and its Appendix.

comment 3366 comment by: *FNAM (Fédération Nationale de l'Aviation Marchande)*

**Comment**

There is a problem with notions of "commander" and "pilot in command". This can lead to safety concerns as their roles are not quite the same and not explained precisely. Moreover, EASA is supposed to transfer only EU-OPS and the change for pilot in command does not justify any safety issue. It would lead to legal uncertainty and cause problems on a flight, especially with augmented crew, as there should only be one commander.

**Proposal**

The notion of "pilot in command" must be changed for "commander" as it is the case in EU-OPS.

**Justification**

This might be a legal issue regarding the scope of understanding and cause problems of reading. All those wordings can lead to specific responsibilities that can be widely different.

comment 3420 comment by: *UK CAA*

**Page No:** 12

**Paragraph No:**

OR.OPS.015.FC (d)

**Comment:**

This IR and the AMC associated with it require that a pilot-in-command (PIC) may only be relieved by a pilot who is either another PIC (AMC OR.OPS.015.FC(d) para 1) or who is a co-pilot who meets the requirements of the AMC **and** has completed a Command Course (AMC OR.OPS.015.FC(d) para 1c).

This is more restrictive than the EU-OPS 1.940 (5) and Appendix 1 to OPS 1.940 (all current cruise relief pilots **do not** require a command course to perform these functions) and will have a serious financial implication for airlines operating with relief pilots (they will all require command courses) and has no demonstrable benefit to safety.

**Justification:**

There is no safety reason to deviate from EU-OPS 1.940(5) and Appendix 1 to OPS 1.940

comment by: *EHO*

General

In reality, for commercial operations, the original rule and ICAO Annex 6 Part III Chapter 7.4.3.5 (Part I - 9.4.4.1) has little to do with a designation as pilot-in-command - it is a competence qualification that is revalidated purely by operating.

This has been picked up by EASA but under the title 'Designation as pilot-in-command' and not as a Route/Role/Area - Competence Qualification.

It might be better if the existing OR.OPS.020.FC was split into two parts: one which deals with the Designation as pilot-in-command; and a second for CAT which deals with "Route/Role/Area – Competence Qualification".

The new element could have ICAO compliance built in to it.

(2) except in the case of balloons:

(i) has adequate knowledge of the route or area to be flown and of the aerodromes, **including alternates**, facilities and procedures to be used;

Justification:

The PIC must also be familiar with the destination alternates.

comment

885

comment by: *ECA - European Cockpit Association*

Comment on OR.OPS.020.FC (b) (2) (ii): Rewrite paragraph so that the intention of EU-OPS is regained:

(ii) in the case of commercial operations, ~~has had experience within the last 12 months of the route or area to be flown and of the aerodromes, facilities and procedures to be used;~~ regualification is requir ed if the pilot has not has had experience within the last 12 months of the route or area to be flown and of the aerodromes, facilities and procedures to be used;

Justification:

This text, as written, would never allow a PIC to fly a new route; the EU-OPS requirement was intended to describe re-qualification methods, being either a new theoretical familiarisation or actual operation in that area/to that airport.

comment

1449

comment by: *Pietro Barbagallo ENAC*

Comment: (b) ....where the operator has its principle place of business should be substituted by ...has its principal place of business and home base.

Justiifcation: Principle relates to set of moral rules, standard, rule of personal conduct while principal as a legal wording is related to capital or property as opposed to interest or income derived for it, first of importance, rank, value. As principle is an improper word, principal alone and without "home base" permits an operator to take advantage of being certified and over sighted by small and understaffed Authorities while doing almost all business outside of that Country. This creates unfair competition with other Operators and has to be mitigated awaiting that the vision of a real standardization proves to be true.

comment

1450

comment by: *Pietro Barbagallo ENAC*

Comment: The following paragraph should be added: c) In multi crew operations, the designated Pilot in command may also be referred to as the "Commander"

Justiifcation: "Designated pilot in command" is a very long term and so not very easily used in documents and in any form of communication. This term gives also additional problems when traslated in some languages. One of these mistranslations can be found in Basic Regulation 216/2008 Annex IV 1c in which designated PIC is translated in Italian as Comandante, that is Commander. Further misunderstandings arise when "designated" is dropped in conversation and Designatrd PIC becomes simply PIC. Commander as a synonymous wording for "designated PIC" doesn't put in jeopardy all the assumptions made in NPA 2009-2 (25) and adds clarity and simplicity to communication, particularly but not limited to, when more than one person in the crew has completed the command course. Furthermore Commander and its translations is a well establish word within the aviation community, including passengers that fully understand the implications of that appellative because it is deeply rooted in the culture of professional and non professional people worldwide.

  - (c) Training on pilot-in-command responsibilities;
  - (d) Line training as pilot-in-command under supervision, for a minimum of:
    - (1) 10 sectors, in the case of aeroplanes; and
    - (2) 10 hours, including at least 10 sectors, in the case of helicopters.
  - (e) Completion of a line check as pilot-in-command;
- and
- (f) Elements of crew resource management training.

**AMC OR.OPS.015.FC (d) Composition of flight crew**

**INFLIGHT RELIEF OF FLIGHT CREW MEMBERS AEROPLANES 1 b. and c.**

**Comment:**

All these elements are interlinked but have a significant effect when related to Augmented Crew Operation. EASA have chosen not to use the term 'Commander' which was utilised by the JAA to differentiate between pilots who were licensed to be in command but were not nominated as pilot-in-command. Their reasoning is that ICAO do not use the term. However in the JAA/EU-OPS/EASA world there is an anomaly in that in some states a pilot is rated in his license automatically as Pilot-in-command [or co-pilot] UK,EIRE being 2 but there are others. The remaining States rate a Pilot as Co-Pilot OR pilot-in-command. Thus in these states [UK,EIRE etc] a Cruise relief Captain [co-pilot with pilot-in-command privileges] need only have such training as decided by the Operator. Those other States have to give a co-pilot a LHS OPC [as it stands at this time]. This procedure is adopted in Germany/France and other states.

The consequence of EASA's planning is to require a relief Captain to be a Captain and no longer a Co-Pilot with pilot-in-command privileges and appropriate training as decided by the operator.

EASA indicates that the relieving Pilot has total command of the aircraft, which is not true as the 'Commander' is still legally responsible for the flight. In a 2 man crew, when the Captain goes to the toilet, the F/O becomes the Pilot flying, but the Captain [Commander] is still legally responsible. The AMC should clarify that there is only one pilot-in-command, who retains the final decision during the entire flight, even when relieved by another pilot [e.g. cruise relief captain] for the conduct of the flight. [Excepting the formal hand-over in flight of command authority from one "commander" to another in ultra long range operations where two flight crews are required to enable the aircraft to remain airborne beyond what hitherto has been agreed as an acceptable flight duty period. The off-duty crew can therefore obtain uninterrupted and recuperative rest.]

The pilot-in command status is not related to pilot-flying/pilot-not-flying, but identifies the flight crew member as being the "final authority" on board.

The outcome of this is that there will be increased crew costs but without any

proven increase in Safety. If the current system is unsafe then it should be stopped immediately not wait until EASA regulations become law.

**Proposal:**

1. Use EU-OPS Appendix 1 to EU-OPS 1.940
2. Reinstate the term 'Commander' as per EU-OPS 1.940 (a) 5 to avoid confusion

comment

comment by: *Southern Cross International*

For operators performing ferry flights or test flights for MRO providers and leasing companies, it should be possible to hire a crew or crew member for a specific task. In such cases it should be acceptable if the pilot-in-command has completed an approved command course at any operator (which may be his current employer).

Also, for operators temporarily hiring TRI/TREs (for example for the purpose of introducing a new aircraft type or in case of fleet expansion) it should be acceptable if the TRI/TRE has completed an approved command course in the past. Otherwise these TRI/TRE's would have to repeat a command course for each new assignment.

It is suggested to change OR.OPS.020.FC (b) (3) as follows:

(3) in the case of multi-crew operations, has completed a command course provided by the operator, as specified in the Operations Manual, or any alternative command course accepted by the competent authority.

comment

1888

comment by: *Southern Cross International*

OR.OPS.020.FC (b)(2)(ii)

Due to the wide variety of aircraft operated by our company, the extremely short period of time for which those aircraft are operated, and worldwide operating area, requiring experience within the last 12 month of the route or area to be flown in, and of the aerodrome, facilities and procedures to be used is impracticable.

For commercial operations other than CAT a briefing or self-briefing (Category A and B aerodromes) or flight simulator instruction (Category C aerodromes, if applicable) should be sufficient flight preparation.

**Comment:**

The requirement in OR.OPS.020.FC (3) (to have completed a command course) is far more restrictive than the corresponding EU-OPS paragraph on in-flight relief of flight crew members, which allows the PIC to be relieved by another suitably-qualified flight crew member (who does not need to be a Commander) above FL200. Generally, the only pilots who have completed command courses are captains. This proposal would seem to imply that command courses will be more widely required, which is unacceptable.

This EASA proposal, which is not line with EU-OPS. neglects decades of safe operations based on the existing rules. It has no safety justification and would lead to an unacceptable increase in crew cost. It will lead to business shifting to non-EU airlines.

**Proposal:**

Realign the in-flight relief requirements for flight crew with the provisions of EU-OPS (Appendix 1 to EU-OPS.1.940) through a simple copy and paste of the EU-OPS provisions into the corresponding EASA Implementing Rules

**General Comment:**

NPA 2009-2 in its entirety is unfit for the purpose for which it is intended and must be withdrawn and reconsidered.

OR.OPS.020. Designation as Pilot-in-Command

and

AMC.OR.OPS.015 FC (d) Composition of flight crew (In-Flight Relief of Flight Crew Members)

**Relevant Text:**

**AMC OR.OPS.015.FC** (d) Composition of flight crew  
INFLIGHT RELIEF OF FLIGHT CREW MEMBERS AEROPLANES

A flight crew member should be considered suitably qualified to relieve another flight crew member of his duties at the controls in flight in the following cases:

1 The pilot in command may delegate the conduct of the flight to another qualified pilot provided the relieving pilot in command:

- a. holds the appropriate type or class rating;
- b. meets the applicable recent experience requirements for pilots in command as specified in FCL.060;
- c. meets the relevant qualifications prescribed in OR.OPS.020.FC, such as minimum level of experience, command course, competence regarding area, route, aerodrome, facilities and procedures; and
- d. meets any other requirements which the operator may have established for that purpose.

And from **OR.OPS.020.FC** to which it refers in sub para (c):

**OR.OPS.020.FC** Designation as pilot in command

(a) One pilot amongst the flight crew shall be designated by the operator as pilot in command:

(b) The operator shall only designate a flight crew member to act as pilot in command:

if

he/she:

(1) complies with the minimum level of experience specified in the Operations Manual;

(2) except in the case of balloons:

(i) has adequate knowledge of the route or area to be flown and of the aerodromes, facilities and procedures to be used;

(ii) in the case of commercial operations, has had experience within the last 12 months of the route or area to be flown and of the aerodromes, facilities and procedures to be used;

(3) in the case of multicrew

operations, has completed a command course provided by the operator, as specified in the Operations Manual;

**Comment:**

The requirement in OR.OPS.020.FC (3) (to have completed a command course) is far more restrictive than the corresponding EU-OPS paragraph on in-flight relief of flight crew members which allows the PIC to be relieved by another suitable qualified flight crew member which does not need to be a Commander above FL200.
