Revised operational approval criteria for performance-based navigation — Air operations

EXECUTIVE SUMMARY

These Decisions, amending the acceptable means of compliance (AMC) and guidance material (GM) to the annexes to Regulation (EU) No 965/2012 (hereinafter referred to as the ‘Air OPS Regulation’), address an economic issue related to performance-based navigation (PBN) operations. EASA is issuing these Decisions following the amendment of the Air OPS Regulation through Regulation (EU) 2016/1199.

The specific objectives of the rulemaking task are the:

— provision of PBN-related rules on pilot training and checking;
— removal of the requirements for specific approvals for most PBN operations;
— compliance with the fourth edition of the ICAO PBN Manual; and
— introduction of proportionate operating procedures where necessary.

The adopted changes are expected to maintain safety and provide significant economic benefits to air operators, pilots and competent authorities.

The Decisions also include clarifications on the requirements on upper torso restraint (UTR) systems, as well as new AMC and GM on the use of oxygen and on the transport of dangerous goods in the context of NCO operations.

1. **Procedural information**

1.1. **The rule development procedure**

This rulemaking activity is included in the Agency’s Rulemaking Programme under RMT.0256 & RMT.0257 (MDM.062(A) & (B)). The scope and timescale of the task were defined in the related Terms of Reference.

The draft text of these Decisions has been developed by the Agency based on the input of the Rulemaking Group RMT.0256 & RMT.0257 (MDM.062(A) & (B)). All interested parties were consulted through Notice of Proposed Amendment (NPA) 2013-25\(^3\). 200 unique comments were received from interested parties, including industry, national aviation authorities and social partners.

The Agency reviewed the comments received during the consultation. The comments received and the Agency’s responses thereto were presented in Comment-Response Document (CRD) 2013-25. Based on the comments received, the Agency addressed Opinion No 03/2015 to the European Commission. The related EU regulation (Regulation (EU) 2016/1199\(^4\)) was published on 22 July 2016.

The final text of these Decisions with the AMC/GM has been developed by the Agency based on the input of Review Group RMT.0256 & RMT.0257 (MDM.062(A) & (B)).

The process map on the title page summarises the major milestones of this rulemaking activity.

1.2. **Structure of the related documents**

Chapter 1 contains the procedural information related to this task. Chapter 2 explains the core technical content. Chapter 3 provides references. The text of the AMC/GM is annexed to the ED Decisions.

---

\(^2\) The Agency is bound to follow a structured rulemaking process as required by Article 52(1) of the Basic Regulation. Such process has been adopted by the Agency’s Management Board and is referred to as the ‘Rulemaking Procedure’. See Management Board Decision No 01-2012 of 13 March 2012 concerning the procedure to be applied by the Agency for the issuing of opinions, certification specifications and guidance material (Rulemaking Procedure).

\(^3\) In accordance with Article 52 of the Basic Regulation and Articles 5(3) and 6 of the Rulemaking Procedure.

2. **Explanatory Note**

2.1. **Overview of the issues to be addressed**

This rulemaking task addresses PBN operations. It provides new AMC/GM both for PBN operations for which an air operator needs to obtain a specific approval (SPA) and for PBN operations without a requirement for a SPA; furthermore, it consequentially amends the privileges of instrument ratings for pilots in the Aircrew Regulation.

2.2. **Objectives**

The overall objectives of the EASA system are defined in Article 2 of the Basic Regulation. This rulemaking task will contribute to the achievement of the overall objectives by addressing the issues outlined in Section 2.1.

The specific objectives of this rulemaking task are to:

(a) establish safe and cost-efficient pilot training and checking requirements to remove the need for SPA for the vast majority of PBN operations;

(b) reduce the number of cases in which an operational approval for a PBN operation is required for operators conducting commercial air transport (CAT) operations, specialised operations (SPO), non-commercial operations with complex motor-powered aircraft (NCC), and non-commercial operations with other-than-complex motor-powered aircraft;

(c) take into account the introduction of RNP 2, Advanced-RNP and RNP 0.3 in the fourth edition of the ICAO PBN Manual; and

(d) take the opportunity to introduce other necessary changes to the AMC/GM to the Air OPS Regulation in relation to:

(1) transport of dangerous goods (AMC/GM to Part-NCO);

(2) upper torso restraint (UTR) systems (AMC/GM to Parts CAT, NCC, NCO and SPO) and

(3) the use of oxygen (AMC/GM to Part-NCO).

2.3. **Overview of amendments to the NPA proposal concerning PBN in the Air OPS Regulation**

2.3.1 GM to Annex I (Definitions)

**GM1 Annex I Definitions**

The following terms have been added to the list of definitions: ‘lateral navigation’ and ‘space-based augmentation system (SBAS)’.

**GM2 Annex I Definitions**

The list of abbreviations and acronyms has been updated.

2.3.2 AMC/GM to Annex II (Part-ARO)

**GM2 ARO.OPS.230 Specific approval of RNP AR APCH**

The proposed GM with the subtitle ‘procedure-specific approval’ has been deleted following comments made on the NPA proposal.
2.3.3 AMC/GM to Annex III (Part-ORO)

There have been no content changes compared to the NPA proposal.

2.3.4 AMC/GM to Annex IV (Part-CAT)

AMC1 CAT.OP.MPA.126 Performance-based navigation — PBN operations

A new AMC has been added to ensure compliance with the proposed standard in ICAO Annex 6. This AMC states that for PBN operations, the operator should:
— establish operating procedures;
— specify flight crew qualifications, proficiency constraints and training programmes; and
— ensure continued airworthiness of the area navigation system.

All following AMCs have been re-numbered.

AMC2 CAT.OP.MPA.126 Performance-based navigation — Monitoring and verifications

Based on comments received, the AMC text has been restructured and shortened. Moreover, the clarity of the text has been improved.

GM1 CAT.OP.MPA.135 Routes and areas of operation — general: RNAV 10

The text has been relocated to GM1 CAT.OP.MPA.126.

GM1 CAT.OP.MPA.182 Destination alternate aerodromes — instrument approach procedures relying on GNSS: Intent of the rule

It should be noted that the new implementing rule CAT.OP.MPA.182 has been changed compared to the NPA version. This new GM was added to describe the intent of the rule and to clarify that for the selection of the destination aerodrome or alternate destination aerodrome, planning minima requirements need to be complied with.

GM2 CAT.IDE.A.345 Communication and navigation equipment for operations under IFR or under VFR over routes not navigated by reference to visual benchmarks — Aircraft eligibility for PBN specification not requiring specific approval

This new GM points out that the aircraft eligibility for PBN specifications is usually stated in the aircraft flight manual (AFM). However, this may not always be the case since some PBN equipment and installations may have been certified prior to the publication of the PBN Manual and the adoption of its terminology for the navigation specification. Where such a reference of the PBN specification capability cannot be found in the AFM, other information provided by the type certificate (TC) holder, the supplemental type certificate (STC) holder or the design organisation having a privilege to approve minor changes may be considered to determine the capabilities of the aircraft.

This new GM lists these other documents, which can be considered, as well as various references which may be found in the AFM or other acceptable documents in order to consider the aircraft’s eligibility for a specific PBN specification if the specific term is not used in the AFM.
GM2 CAT.IDE.H.345  Communication and navigation equipment for operations under IFR or under VFR over routes not navigated by reference to visual benchmarks — Aircraft eligibility for PBN specification not requiring specific approval

The same GM described above regarding aeroplanes has been repeated in the section applicable for helicopter operations.

AMC1 CAT.IDE.A.355  Electronic navigation data management — Database suitability

This AMC has been deleted. The applicable text has been changed by RMT.0593 (Technical requirements and operational procedures for the provision of data for airspace users for the purpose of air navigation) and will be published at a later stage when the rulemaking task is completed.

2.3.5 AMC/GM to Annex V (Part-SPA)

AMC1 SPA.PBN.105(b)  PBN operational approval — Training and flight crew qualification for RNP AR APCH

It should be reminded that the NPA text version of this AMC transposed the corresponding AMC20-26 material with almost no changes. Based on comments received and important contributions from the Review Group members, this AMC has been considerably modified and improved. The new training material is now consistent with the terminology of training formats used in ORO.FC as well as with the training concept of other operations requiring a specific approval, in particular SPA.LVO.

The AMC contains the following new elements:

— general provisions outlining the ground and flight training elements for flight crew members for the following three scenarios: flight crew members with no RNP AR APCH experience; with RNP AR APCH experience with another EU operator; with RNP AR APCH experience with the operator;
— provisions for conversion training;
— training for RNP AR APCH procedures requiring a procedure-specific approval; and
— training for flight operation officers/dispatchers.

AMC1 SPA.PBN.105(c)  PBN operational approval — Safety assessment

Based on comments received from stakeholders and the Review Group members, this AMC has been significantly modified. It clarifies that for all RNP AR APCH procedures, the air operator has to perform a flight operational safety assessment (FOSA) in a proportionate manner, and that credits can be taken from safety assessments carried out the by the air navigation service provider and/or the aerodrome operator.

AMC1 SPA.PBN.105(d)  PBN operational approval — Operational considerations for RNP AR APCH

Based on comments received from stakeholders and the Review Group members, this AMC has been significantly shortened and the clarity of the text has been improved.

2.3.6 AMC/GM to Annex VI (Part-NCC)

Already the NPA proposed similar technical rules as those in Part-CAT. This approach has been accepted by stakeholders and therefore maintained. The above-described changes in Part-CAT necessitated consequential amendments in Part-NCC.
2.3.7 **AMC/GM to Annex VII (Part-NCO)**

Already the NPA proposed similar technical rules as those in Part-NCC. This approach has been accepted by stakeholders and therefore maintained. The above-described changes in Part-NCC necessitated consequential amendments in Part-NCO.

2.3.8 **AMC/GM to Annex VIII (Part-SPO)**

Already the NPA proposed similar technical rules as those in Part-NCC. This approach has been accepted by stakeholders and therefore maintained. The above-described changes in Part-NCC necessitated consequential amendments in Part-SPO.

2.4. **Overview of amendments to the NPA proposal concerning other additional issues addressed in the Air OPS Regulation**

2.4.1 **Dangerous goods — AMC/GM to Part-NCO**

Member States and stakeholders expressed growing concerns on the transport of dangerous goods by aircraft, including by non-commercial operators of other-than-complex motor-powered aircraft. Therefore, NCO.GEN.140 was amended to consider reasonable quantities of articles and substances that would otherwise be classified as dangerous goods and that are used to facilitate flight safety as authorised under paragraph 2.2.1(a) of the Technical Instructions.

A corresponding AMC and GM has been added in the Decision amending the AMC/GM to Part-NCO.

2.4.2 **UTR systems — AMC/GM to Parts CAT, NCC, NCO, and SPO**

Editorial changes and clarifications have been introduced following the amendment of paragraphs on UTR in all technical Parts of the Air OPS Regulation.

2.4.3 **Oxygen — AMC/GM to Part-NCO**

New AMC and GM on the determination of the need of oxygen and its use both during the preflight and during the in-flight phase have been introduced in the AMC/GM to Part-NCO.
