Industry standard as AMC/GM for SMS implementation

Presented at the
2015 EASA Maintenance and
Production workshop
G.Garrouste

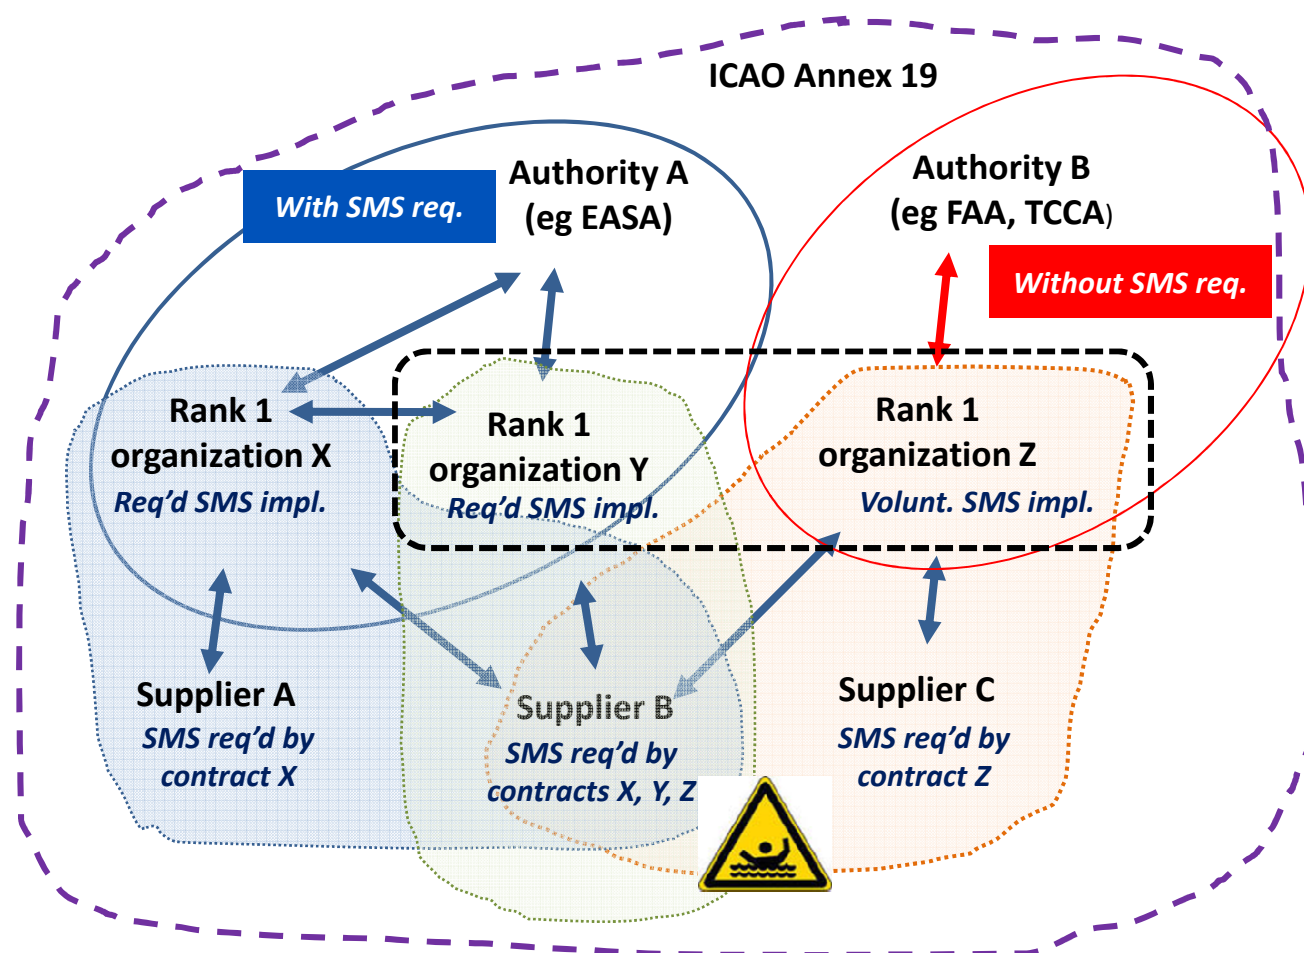

Industry views on SMS implementation (1/3)

A (simplified) view of the network:

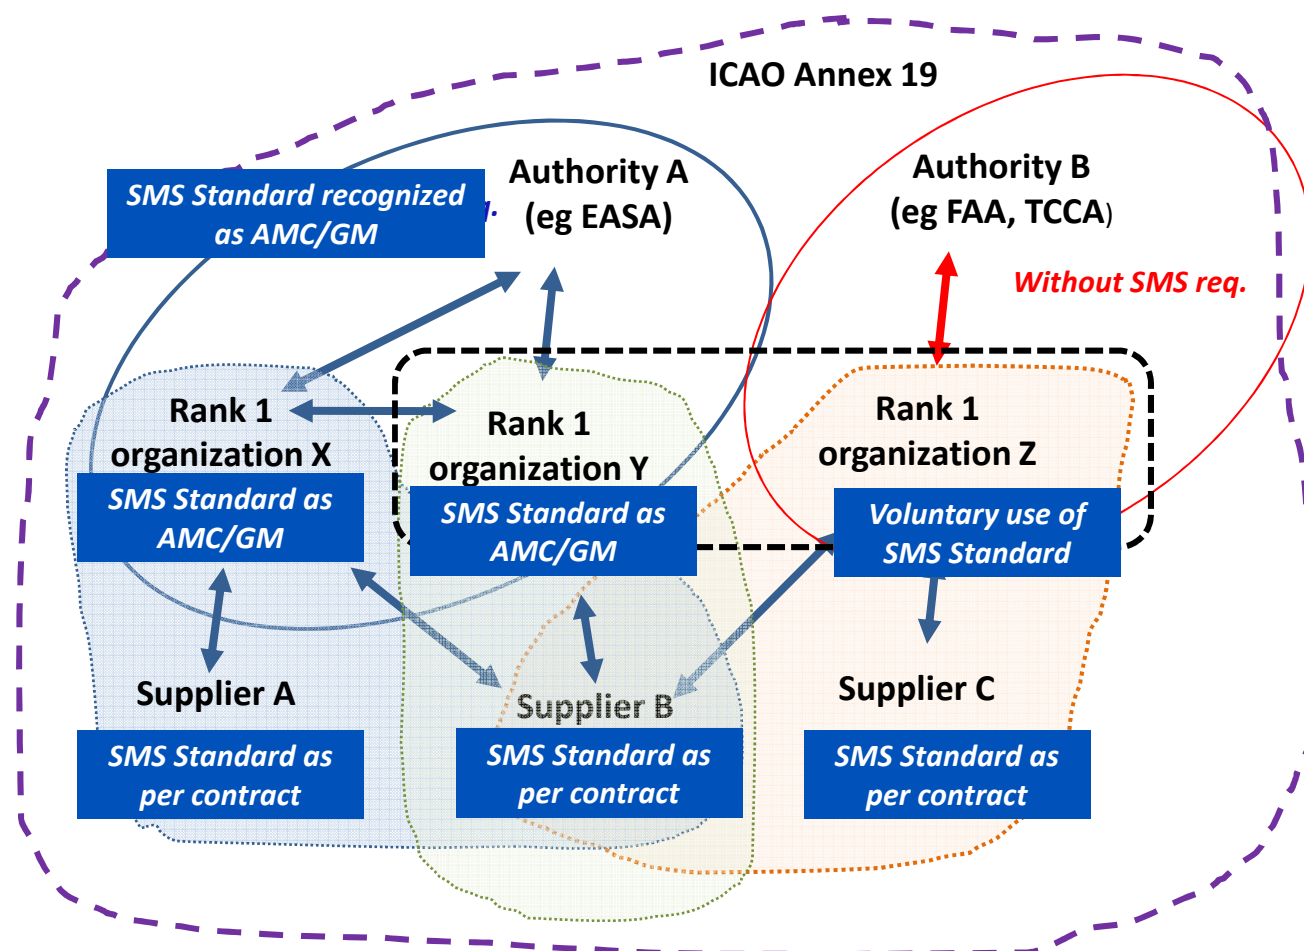

Industry views on SMS implementation (2/3)

The SMS framework:

Industry views on SMS implementation (3/3)

The added value of the SMS standard:

Objectives of the industry proposal to develop an industry standard for SMS implementation

☐ General agreement amongst manufacturers:

- Corporate approach shall be enabled when several certificates are detained, worldwide.
- Implementation in the worldwide supply chain shall be made efficient and effective.
- Investments already made shall be recognized / secured.
- Uncertainty associated with the lack of rulemaking activities in some regions/countries (eg Canada) shall be minimized.
- Risk shall be reduced with unharmonized and very detailed / prescriptive regulatory material been developed by some Authorities while the SMS implementation is still building up.
- The development of such a standard shall make the best use of the available industry experts and therefore should implement an efficient and innovative development process and duly consider the available material (from ICAO, SMICG, industry groups).
- Involvement of the Authorities shall be tailored for ensuring acceptance of the industry standard as ACM/GM to SMS essential requirements.
