WP 2: Safety analysis and occurrence reporting

On-site support activity to Montenegro CAA

Within the framework of the EU-funded EASA - IPA4 project, an on-site support activity on safety analysis and occurrence reporting was delivered to the Civil Aviation Agency of Montenegro from 05 to 08 June 2018.

The overall objective of this interactive working session was to review the current status of the safety analysing and occurrence reporting system with regard to the requirements of the EU. The objective was also to help strengthen the capacity of proactive safety management.

The activity encompassed support on implementation of the legal framework and on improvement of NAA processes and procedures linked to management and evaluation of occurrence reports. Presentations on occurrence reporting elements (e.g. just culture, safety analysis, use of taxonomy, etc.) were delivered and discussed with NAA staff. EASA experts supported the installation of updates of the ECCAIRS software and taxonomy database, and delivered presentations to industry representatives in order to increase understanding on the need for data, relevant processes and increase awareness on the importance of safety data exchange.
