Appendix IV — Index .....	80

## 1. Introduction

### 1.1. General

The previous issue of the Rulemaking Programme was that of 2014–2017 in its revised version dated December 2013.

In 2014, the European Aviation Safety Agency (hereinafter referred to as the 'Agency') underwent a major organisational change. Two key characteristics of this change were:

- the dissolution of the Rulemaking Directorate and the transfer of rules development activities to the Certification Directorate and the newly created Flight Standards Directorate; and
- the assignment of all programming activities to the newly created Strategy and Safety Management Directorate.

The expected benefits of these two changes are:

- the integration of the rulemaking activities with other activities (certification, standardisation and organisation approvals) in the same field and the creation of poles of technical competences per department in each directorate; and
- the adoption of a top-down, fully consistent and coherent approach to the programming of the Agency key activities.

This issue of the Rulemaking Programme already takes advantage of the latter. Rulemaking tasks are not presented any more as a list of tasks per technical domain; instead, they are presented per main driver (safety; environment; efficiency/proportionality; level playing field) and main priority action areas (e.g. all tasks related to the issue of loss of control in flight (LOC- I)). Furthermore, they are presented in the context of other related Agency activities. In particular, a link to related European Plan for Aviation Safety (EPAS) and European Strategic Safety Initiative (ESSI)<sup>1</sup> safety promotion actions is established.

Through this, we aim to provide the Agency's stakeholders with a comprehensive and coherent vision of what the Agency intends to do in the coming years in order to improve safety or the environmental performance of the aviation sector (safety/environment driver), to support fair competition and free movement of persons and services (level playing field driver), and to support business, technological development and competitiveness (efficiency/proportionality driver).

### 1.2. Drivers of the Rulemaking Programme

**Safety/environment** — The rulemaking projects falling under this category are driven principally by the need to increase the current level of safety or improve the current environmental performance of the aviation sector.

---

<sup>1</sup> ESSI is the European Strategic Safety Initiative and includes 3 groups: European Commercial Aviation Safety Team (ECAST), dealing with Commercial Air Transport Safety; European General Aviation Safety Team (EGAST), dealing with General Aviation Safety; and European Helicopter Safety Team (EHST), dealing with Helicopter Safety.

**Level playing field** — The rulemaking projects falling under this category are driven principally by the need to ensure that all players in a certain segment of the aviation market can benefit from the same set of rules, thereby promoting fair competition and free movement of persons and services. Naturally, these projects will also contribute to maintaining or even increasing the current level of safety.

**Efficiency/proportionality** — The rulemaking projects falling under this category are driven by the need to support technological and business advancements as well as to ensure that rules are cost-effective in achieving their objective. Naturally, these projects will also contribute to maintaining or even increasing the current level of safety.

### 1.3. Structure of the Rulemaking Programme

This Rulemaking Programme is presented per driver, issue category and action area. For each action area, the issue, the objective and the related actions are presented. An action area may thus contain several rulemaking tasks. For completeness and transparency, the actions from the EPAS are also documented, including rulemaking, safety promotion and focused oversight actions.

For each rulemaking task, besides the specific issue and objective, the basic information related to responsibility, schedule and affected stakeholders is provided. The results from preliminary impact assessments (PIAs) are presented, where available<sup>2</sup>, in the top right corner. Letters 'A', 'B', and 'C' indicate issues of high, medium or low significance; they are marked with red, amber and green colours respectively. The numbers are the result of further analysis. The higher the number, the higher the significance level of the issue, i.e. A22 is higher than A10, which is higher than B12. Preliminary regulatory impact assessments (Pre-RIAs) were not conducted in previous years for non-controversial recurring tasks (rule updates) and for tasks stemming from legal obligations.

The following figure is an example depicting how the above-mentioned conventions are used.

---

<sup>2</sup> Due to the ongoing review of the rulemaking process, which proposes preliminary impact assessments per action area (e.g. LOC- I), no preliminary regulatory impact assessments for the rulemaking actions included in this programme have been conducted and issued in 2015.

The screenshot shows a hierarchical structure of rulemaking tasks. Callouts identify the following elements:

- Driver:** Points to the top-level category '2. Safety'.
- Issue category:** Points to the sub-category '2.1. Systemic issues'.
- Action area:** Points to the specific task '2.1.1. Safety Management'.
- Rulemaking task number:** Points to the identifier 'RMT.0000'.
- Current status:** Points to the 'Start' date '2015'.
- Pre-RIA score:** Points to the score 'B18' in a yellow box.

Action Number	Title	Objective		
RMT.0000	Task Title	Issue/objective description		
Affected Stakeholders				
XXXXXX				
Start	Next Deliverable	End Deliverable	Owner	Pre-RIA
2015	NPA/2015	Opinion/2016	EASA FS.5	B18

For each Opinion planned, the related CS, AMC and GM will be issued not later than one year after the adoption of the draft Implementing Rules by the EASA Committee. Therefore, the CS, AMC and GM pending adoption of the related Implementing Rules are not included in the programme, except for those scheduled to be issued in 2016.

The following tables provide an overview of the drivers, issue categories and action areas identified in this Rulemaking Programme.

### 1.3.1. Safety

In order to ensure full coherence and consistency, and at the same time provide the possibility for a better assessment of the priorities, the action areas related to the **safety** driver are presented under the same breakdown as in the **EPAS**.

Driver	Issue category	Action area	
Safety	Systemic issues	Safety management	
		Aviation personnel	
		Aircraft tracking, rescue operations and accident investigations	
	Operational issues	Commercial air transport fixed wing	Loss of Control in flight (LOC- I)
			Design and maintenance improvements
			Mid-air collisions (MACs)
			Runway safety
			Ground safety
			Controlled flight into terrain (CFIT)
			Fire, smokes and fumes
			Helicopter operations
	General Aviation (GA) safety		
	Emerging issues		New products, systems, technologies and operations
			Regulatory and oversight considerations
			New business models

### 1.3.2. Environment

The actions related to environmental protection are presented in a separate section to ease identification.

Driver	Action area
Environment	Climate change
	Aircraft noise
	Local air quality

### 1.3.3. Level playing field

In order to clearly identify which category (-ies) of stakeholders will benefit from the increased level playing field, the action areas related to the **level playing field** driver are broken down per category of stakeholders.

Driver	Action area
Level playing field	Airlines Manufacturers Operators other than airlines Maintenance organisations (MOs)/service providers/continuing airworthiness management organisations (CAMOs) Training organisations (TOs) Aerodrome operators Air traffic management (ATM)/air navigation services (ANS) systems and constituents GA Individuals (pilots, mechanical engineers, air traffic controllers (ATCOs)) Remotely piloted aircraft systems (RPAS)

### 1.3.4. Efficiency/proportionality

In order to clearly identify which category (-ies) of stakeholders will benefit from the improved efficiency and proportionality, the action areas related to the **efficiency/proportionality** driver are as well broken down per category of stakeholders.

In addition, under the **efficiency/proportionality** driver, two specific action areas have been included:

- **Regular update/review of rules:** This includes generic tasks allowing the launch of minor improvements or technological updates, corrections or quick fixes to regulations.
- **PCP/SESAR deployment:** This covers all tasks related to the implementation of the Pilot Common Project (PCP) and the single European sky ATM research (SESAR) programme.

Driver	Action area
Efficiency/proportionality	Aerodrome operators Airlines GA Manufacturers Operators other than airlines RPAS TOs MOs/service providers/CAMOs PCP/SESAR deployment Regular update/review of rules Individuals (pilots, mechanical engineers, ATCOs)

### 1.3.5. The need for a project approach to action areas

Certain action areas, such as ‘loss of control’, contain a large number of complex rulemaking and non-rulemaking actions. In order to effectively manage such an action area, it is suggested that projects are managed by a selected project manager per action area. The action areas qualifying for this approach include:

- loss of control;
- runway excursions (REs); and
- safety management.

It should be noted that GA tasks are already coordinated under the Road Map for Regulation of General Aviation project — shortly called the ‘GA Road Map’ .

### 1.4. The link to the Agency’s strategic objectives and work programme 2016

This Rulemaking Programme provides the complete description of rulemaking activities in 2016 and a further outlook to 2020. The following table illustrates how this programme implements the strategic objectives.

Driver	Strategic objective	Issue and activity objective 2016	
Efficiency	Implementation of the performance-based environment	<p><b>Safety management</b> Objective: Work with authorities and organisations to implement safety management.</p> <p><b>GA/CS-23 revision</b></p> <ul style="list-style-type: none"> <li>— Adoption of the CS-23 revision with the objective of making the rules less prescriptive, relying more on industry standards; and</li> <li>— Provision of support to Member States (MS) in implementing the new Air OPS Regulation in accordance with the agreed strategy.</li> </ul>	
Efficiency	Become the reference Agency for the implementation of the ATM regulatory framework	<p><b>SESAR deployment</b> Stemming from the SESAR programme, there is a need to develop a framework for the introduction of new technologies and the establishment of new principles at operational level in the field of ATM/ANS.</p> <p>Objective: Enable the implementation of new working methods and technologies developed by SESAR.</p> <p>Activities include regulatory enablers for remote tower operations and the SESAR common project implementing rules (IRs).</p>	
Efficiency	Implementation of the GA Road Map	<p><b>GA</b> Objective: Reduce the regulatory burden for GA. This includes:</p> <ul style="list-style-type: none"> <li>— simplification of rules for instrument flight;</li> <li>— revision of the European operational rules for balloons in cooperation with stakeholders;</li> <li>— facilitation of the implementation of the rule for private pilot training outside approved training organisations (ATOs);</li> <li>— Light Part-M with the publication of a comment-response document (CRD) and an opinion by summer 2016; and</li> <li>— Reduction of regulatory burden by establishing CS-STAN for standard changes and repairs.</li> </ul>	<b>57</b>

The Rulemaking Programme contributes to fulfilling the vision statements of the Agency's Strategic Plan: The Agency works on safety, in a proactive manner, helped by enhanced safety analysis capability.

### **1.5. Highlights**

As regards safety, the Agency focuses on three areas to address systemic, operational and emerging issues. A key activity to address systemic issues is the incorporation of safety management principles in initial and continuing airworthiness. In the area of commercial air transport by aeroplanes, key actions are the review of pilot training provisions in order to address the recovery from upset scenarios, new measures to prevent loss of control during go-around or climb and the introduction of technology on-board aircraft to mitigate the risk of runway excursions. In the area of helicopter operations, a key activity is the strengthening of requirements for helicopter lubrication.

With regard to environmental protection, the main activity will be the update of Regulation (EC) No 216/2008 (hereinafter referred to as the 'Basic Regulation') in line with the Committee on Aviation Environmental Protection (CAEP)/10 recommendations expected for February 2016. The task to deliver an update of CS-26 for halon replacement is also expected to be concluded in the course of 2016.

The Agency's activities related to level playing field reflect the fact that rules may need to be harmonised within the EU as well as with the main international trade partners in order to ensure fair competition or facilitate the free movement of goods, persons and services. Focus activities in this field are in the areas of performance-based navigation (PBN), electronic flight bags (EFBs) and fuel planning.

The activities driven by efficiency/proportionality acknowledge the need to support technological advancements and deliver a cost-efficient regulatory system, which delivers safety at the lowest possible costs to stakeholders and citizens. A key priority for the Agency in this respect is the implementation of the 'Road Map for Regulation of General Aviation'. Work continues to progress in the various domains. This notably includes the reorganisation of CS-23 in order to reduce the certification costs. Furthermore, the simplification of maintenance rules for GA will continue.

The Agency will also further intensify the work on RPAS (civil drones) in order to deliver an efficient regulatory system for this emerging technology.

Finally, the Rulemaking Programme includes rulemaking projects necessary to support the regulatory needs stemming from the PCP/SESAR deployment.

<b>RMT.0262</b>	<b>Embodiment of level of involvement (LOI) requirements into Part-21</b>				
	To ensure compliance of Part-21 with the framework of safety management provisions of ICAO Annex 19. Introduction in Part-21 of a risk-based approach for the determination of the LOI of the Agency in product certification. This entails introduction of:				
	<ul style="list-style-type: none"> <li>— systematic risk management (hazard identification, risk assessment and mitigation);</li> <li>— safety performance-based oversight allowing to focus on areas of greater risk;</li> <li>— safety awareness and promotion among all staff involved; and</li> <li>— improved effectiveness and efficiency of Part-21 IRs achieved by their streamlining and improved consistency.</li> </ul>

## 2.1.2. Aviation personnel

### (a) Issue/rationale

As new technologies emerge on the market and the complexity of the system continues increasing, it is of key importance to have the right competencies and adapt training methods to cope with new challenges. It is equally important for aviation personnel to take advantage of the safety opportunities presented by new technologies.

### (b) What we want to achieve (scope and objective)

Ensure continuous improvement of aviation personnel competence.

### (c) How we want to achieve it: rulemaking actions

RM		Aviation personnel													
Action number	Title														
Objective															
<b>RMT.0106</b>	<p><b>Certification specifications and guidance material for maintenance certifying staff type rating training</b></p> <p>Minimum standard for type rating training – ensuring appropriate competency level – safety; task linked to operational suitability data (OSD)</p> <p>The main objective is to improve the level of safety by requiring the applicant for a type certificate (TC) or restricted TC for an aircraft to identify the minimum syllabus of maintenance certifying staff type rating training, including the determination of type rating.</p> <p>This minimum syllabus, together with the requirements contained in Appendix III to Annex III (Part-66) to Commission Regulation (EU) No 1321/2014, will form the basis for the development and approval of Part-66 type training courses.</p> <p><b>Affected stakeholders</b></p> <p>Design approval holders (DAHs), TOs, and maintenance engineers</p> <table border="0"> <tr> <td><b>Start</b></td> <td><b>Next deliverable</b></td> <td><b>End deliverable</b></td> <td><b>Owner</b></td> <td><b>Pre-RIA</b></td> </tr> <tr> <td>2007</td> <td>NPA/2016</td> <td>Decision/2018</td> <td>EASA FS.1</td> <td>-</td> </tr> </table>	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>	2007	NPA/2016	Decision/2018	EASA FS.1	-

<b>RMT.0194</b>	<b>Extension of competency-based training to all licences and ratings and extension of TEM principle to all licences and ratings</b>				
	More performance-based rulemaking will be addressed. The principles of competency-based training (CBT) shall be transferred to other licences and ratings, and the multi-crew pilot licence (MPL) should be reviewed in order to address the input from the ICAO MPL symposium and the European MPL Advisory Board. Some action items from the GA Road Map activity list such as modular training and CBT will be addressed as well.				
	<b>Affected stakeholders</b>				
	ATOs and pilots				
	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>
	2016	ToR/2016	Opinion/2018	EASA FS.3	B18
<b>RMT.0196</b>	<b>Improve flight simulation training devices (FSTDs) fidelity</b>				
	An ICAO harmonisation issue, as the main purpose is to include in the European provisions elements from ICAO Doc 9625 for the use of FSTDs in flight training. The task will also address three safety recommendations (SRs) and aims at including results and findings from the loss of control avoidance and recovery training (LOCART) and RMT.0581 working group results. Harmonisation with the Federal Aviation Administration (FAA) should be considered.				
	<b>Affected stakeholders</b>				
	Operators, ATOs, pilots, instructors, and examiners				
	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>
	2016	ToR/2016	Opinion/2018	EASA FS.3	B18
<b>RMT.0486</b>	<b>Alignment with ICAO on ATCO fatigue management provisions</b>

	Part-147 TOs and NAAs				
	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>
	2016	ToR/2016	Opinion/2018	EASA FS.1	-
<b>RMT.0589</b>	<b>Rescue and firefighting services (RFFS) — Remission factor, cargo flights, etc.</b>				
	The objective of this rulemaking task is to ensure a high and uniform level of safety by establishing minimum medical standards for rescue and firefighting personnel required to act in aviation emergencies. It will also ensure that the level of protection for rescue and firefighting at aerodromes serving all-cargo or mail flights is proportionate to this type of traffic and their particular requirements. Finally, it will as well as ensure a clearer implementation of the remission factor in general.				
	The RMT has been split in two sub-tasks:				
	(a) 1st sub-task: Remission factor, cargo flights, etc.				
	(b) 2nd sub-task: RFFS personnel physical and medical fitness standards				
	<b>Affected stakeholders</b>				
	Aerodrome operators

**2.1.3. Aircraft tracking, rescue operation and accident investigations**

**(a) Issue/rationale**

Safety investigation authorities have frequently raised the issue of a lack of data to support investigations of light aircraft accidents. This is also related to the fact that light aircraft are not required to carry a flight recorder.

As regards large aircraft, the advent of new technologies as well as findings made during safety investigations highlight the need to update the installation specifications for flight recorders.

**(b) What we want to achieve (scope and objective)**

Increase safety by facilitating the recovery of information by safety investigation authorities and thus helping to avoid future accidents.

**(c) How we want to achieve it: rulemaking actions**

RM		Aircraft tracking, rescue operation and accident investigations

## 2.2. Operational issues: CAT by aeroplanes

This section addresses all types of CAT operations including business aircraft operations.

Through analysing the accident and serious incident categories, the following key safety risk areas for commercial air transport fixed wing operations have been identified in the Annual Safety Review (ASR) 2014. The proposed initiatives focus on reinforcing the barriers or risk controls that help to prevent fatalities.

The action areas are ordered by the number of fatal accidents, starting with LOC- I, which has shown the highest number of fatal accidents in the period from 2004 to 2013.

### 2.2.1. Loss of control in flight

#### (a) Issue/rationale

Loss of control usually occurs because the aircraft enters a flight regime which is outside its normal envelope, usually, but not always, at a high rate, thereby introducing an element of surprise for the flight crew involved.

It is the most frequent risk area for fatal accidents, both in Europe and worldwide. On average, there are 3 fatal accidents a year related to LOC- I worldwide and 1 every second year involving an EASA MS operator.

#### (b) What we want to achieve (scope and objective)

Further reduce the risk of accidents in this category.

#### (c) How we want to achieve it: rulemaking actions

RM		Loss of control in flight

<b>RMT.0647</b>	<p><b>Loss of control or loss of flight path during go-around or climb</b></p> <p>The overall goal is to mitigate the safety risk (for large aeroplanes) of loss of control or loss of the flight path of the aircraft during the go-around or climb phases executed from a low speed configuration and close to the ground.</p> <p>The second objective is to prevent an excessive nose-up trim condition when transitioning from a low-speed phase of flight to go-around or climb when high level of thrust is applied. This may be achieved by different means, such as increasing the flight crew awareness of the low speed/excessive nose-up trim condition, or incorporating active systems preventing an unusual configuration (low speed/excessive nose-up trim condition) from developing.</p> <p><b>Affected stakeholders</b></p> <p>DAHs and operators</p> <table border="0"> <tr> <td><b>Start</b></td> <td><b>Next deliverable</b></td> <td><b>End deliverable</b></td> <td><b>Owner</b></td> <td><b>Pre-RIA</b></td> </tr> <tr> <td>2015</td> <td>NPA/2016</td> <td>Decision/2017</td> <td>EASA CT.7</td> <td style="background-color: #c00000; color: white;">A13</td> </tr> </table>	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>	2015	NPA/2016	Decision/2017	EASA CT.7	A13

2.2.2. Design and maintenance improvements

(a) Issue/rationale

Design improvements may limit the probability of technical failures.

Technical failure is the most frequent cause of accidents and serious incidents. Excluding post-crash fires it is also the 2nd highest cause of fatal accidents.

(b) What we want to achieve (scope and objective)

To improve overall safety in relation to bird ingestion, ditching, etc. through design improvements.

(c) How we want to achieve it: rulemaking actions

RM		Design and maintenance improvements				
Action number	Title					
Objective						
<b>RMT.0049</b>	<b>Specific risk and standardised criteria for conducting aeroplane-level safety assessments of critical systems</b>					
<p>To define a standardised criterion for conducting aeroplane-level safety assessment of specific risks that encompasses all critical aeroplane systems on large aeroplanes (i.e. in particular update AMC to CS 25.1309), based on the results of the Aviation Rulemaking Advisory Committee (ARAC) Airplane-level Safety Analysis Working Group (ASAWG).</p> <p>In addition, to amend AMC 25.1309 taking into account the latest updates of industry documents, such as ED79A/ARP4754A.</p> <p>To update CS 25.671 on safety assessment of flight control systems, based on the results of the ARAC Flight Controls Harmonisation Working Group (FCHWG).</p> <p>For both objectives, harmonisation with the FAA, the Transport Canada Civil Aviation (TCCA) and Agência Nacional de Aviação Civil (ANAC) will be ensured as much as possible.</p>

### 2.2.3. Mid-air collisions

(a) **Issue/rationale**

A MAC is an accident where two aircraft come into contact with each other while both are in flight. Although there has been no major mid-air collision in Europe in recent years, AIRPROX related occurrences are the 2nd most critical risk area for all non-fatal accidents and serious incidents in Europe.

(b) **What we want to achieve (scope and objective)**

Further reduce the risk of MACs.

(c) **How we want to achieve it: rulemaking actions**

<b>RM</b>	<b>Mid-air collisions</b>

## 2.2.4.Runway safety

### (a) Issue/rationale

This section deals both with REs and runway incursions (RIs).

According to the definition provided by ICAO, an RE is a veer or overrun off the runway surface. RE events can happen during take-off or landing.

An RI is defined as ‘any occurrence at an aerodrome involving the incorrect presence of an aircraft vehicle or person on the protected area of a surface designated for the landing and take-off of aircraft’ (ICAO Doc 4444 - PANS-ATM).

Abnormal runway contact is often a pre cursor for runway excursions, and together they comprise the most critical risk area for non-fatal accidents in EASA MS whereas RI is the 6th most frequent risk area for all accidents and serious incidents.

### (b) What we want to achieve (scope and objective)

Reduce the number of REs and RIs in fixed-wing commercial air transport.

### (c) How we want to achieve it: rulemaking actions

<b>RM</b>		<b>Runway safety</b>

	2013	NPA/2016	Opinion/2016	EASA FS.2	A14

**RMT.0570 Reduction of runway excursions**

The objective of this task is to increase the level of safety by reducing the number of REs through mandating existing technologies on aeroplane that allow to measure remaining runway left and thus support pilot-decision making.

Due to the nature of the comments received on NPA 2013-09, the Agency has decided to publish a new NPA on the reduction of REs. The proposal of the new NPA will put more emphasis on safety objectives against the risk of REs, while providing more flexibility in terms of design solutions. The means to achieve these objectives will be provided in a technical standard developed jointly by industry and NAAs with the support of an international standardisation body.

**2.2.6. Controlled flight into terrain**

**(a) Issue/rationale**

CFIT occurs when an airworthy aircraft under the complete control of the pilot is inadvertently flown into terrain, water or an obstacle. The pilots are generally unaware of the danger until it is too late.

Whilst the installation of ground proximity warning systems (GPWS) has greatly reduced the risk of fatal CFIT accidents in recent years, CFIT is still a threat in some circumstances.

**(b) What we want to achieve (scope and objective)**

Further reduce the risk of accidents in this category.

MST.006	Include CFIT in national SSPs	CAT	MS	SSP established/Continuous	

**2.2.7. Fire, smokes and fumes**

**(a) Issue/rationale**

Uncontrolled fire on board an aircraft, especially when it is in flight, represents one of the most severe hazards in aviation. Post-crash fire is also addressed in this section.

In-flight fire can ultimately lead to loss of control, either as a result of structural or control system failure, or again as a result of crew incapacitation. Fire on the ground can take hold rapidly and lead to significant casualties if evacuation and emergency response is not swift enough. Smoke or fumes, whether they are associated with fire or not, can lead to passenger and crew incapacitation and will certainly raise concern and invite a response. Even when they do not give rise to a safety impact, they can give rise to concerns and need to be addressed.

Fire is the fifth most frequent risk area for all serious incidents in the past 10 years in EASA MS.

**(b) What we want to achieve (scope and objective)**

Further reduce the risk of accidents in this category.

**(c) How we want to achieve it: rulemaking actions**

<b>RM</b>		<b>Fire, smoke and fumes</b>			
<b>Action number</b>	<b>Title</b>				
	Objective				
<b>RMT.0071</b>	<b>Additional airworthiness specifications for operations: Thermal/acoustic insulation material</b>				
	The general objective of this rulemaking task is to reduce the safety risks due to flame penetration and propagation in the fuselage by introducing retroactive specifications based on CS 25.856(a) and (b), applicable to already type-certified large aeroplanes.				
	<b>Affected stakeholders</b>

## 2.3. Operational issues: Helicopter operations

### 2.3.1. Helicopter operations

**(a) Issue/rationale**

The main categories of accidents and serious incidents in CAT by helicopters are LOC- I, SCFs and collisions during conventional take-off and landing (CTOL)/CFIT. Low altitude operations is the 1st category in aerial work operations with helicopters.

**(b) What we want to achieve (scope and objective)**

Reduce the overall accident rate in helicopter operations

**(c) How we want to achieve it: rulemaking actions**

<b>RM</b>	<b>Helicopter operations</b>				
<b>Action number</b>	<b>Title</b>				
	<b>Objective</b>				
<b>RMT.0119</b>	<b>Yawing conditions</b>				
	<p>In the past, different interpretations have been used for demonstrating compliance with the yaw manoeuvre structural design requirements prescribed under CS 27&amp;29.351. Certification experience has shown that 27&amp;29.351 is often a critical design condition and any variations in interpretation and application can have important repercussions on the strength level required for new designs. The objective is therefore to review the rationale and acceptability of CS 27&amp;29.351 and associated AMC. If the standard is judged to be insufficient, to identify options to enhance the regulation and perform a regulatory impact assessment (RIA) to identify the implications of these options.</p> <p>A gap was identified in the regulations regarding aerodynamic design loads and therefore a new rule, separate from 27&amp;29.351 and not limited to yaw motion, should be developed.</p> <p><b>Affected stakeholders</b></p> <p>DAHs</p>				
	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>
	2006	Decision/2016	Decision/2016	EASA CT.7	-
<b>RMT.0120</b>	<b>Helicopter ditching and water impact occupant survivability</b>				
	<p>This task aims at enhancing post-ditching and water impact standards for rotorcraft that could significantly enhance occupant escape and survivability. It will, in part, consider the recommendations arising from early work performed by the Joint Aviation Authorities (JAA) Water Impact, Ditching Design and Crashworthiness Working Group (WIDDCWG) and the Helicopter Offshore Safety and Survival Working Group (HOSSWG).</p> <p><b>Affected stakeholders</b></p> <p>DAHs and operators</p>

	2012	NPA/2016	Decision/2016	EASA CT.7	-

**RMT.0127 Pilot compartment view**

This proposal addresses a safety issue related to rotorcraft windshield misting and subsequent restriction of pilot vision. The existing rules are unclear as to what is required and how compliance can be demonstrated.

The specific objective is to mitigate the risks linked to restricted pilot vision, particularly during critical phases of flight (take-off, landing, low hover), by requiring a means to remove or prevent the misting of internal portions of transparencies in rotorcraft, thus ensuring safe operations in all likely flight and operating conditions.

In addition, the rulemaking task's scope is proposed to be extended to address the rules governing pilot vision in snow conditions, which are unclear, particularly in relation to piston-engine rotorcraft.

## 2.4. Operational issues: General aviation safety

### 2.4.1. General Aviation

**(a) Issue/rationale**

The main categories of accident in GA are ARC — hard landings and long landings, REs, LOC-I and SPFs. In all categories, risk awareness and airmanship are two important mitigating factors. It is recognised that safety promotion is the best vehicle to tackle this.

**(b) What we want to achieve (scope and objective)**

Improve GA pilot risk awareness and airmanship.

**(c) How we want to achieve it: rulemaking actions**

[None]

**(d) How we want to achieve it: other EPAS actions**

## 2.5. Emerging issues

This section anticipates issues that are emerging or where hazards exist for the immediate or near future. Giving consideration to safety issues derived from operations or regulations that have not been fully deployed, it incorporates a forward-looking element.

### 2.5.1. New products, systems, technologies and operations

#### (a) Issue/rationale

This section addresses the introduction of new designs, technologies or types of operation for which regulatory updates are needed, and highlights some of the most relevant trends that will influence aviation in the years to come.

#### (b) What we want to achieve (scope and objective)

Manage the introduction of new products, systems, technologies and operations.

#### (c) How we want to achieve it: rulemaking actions

## 2.5.2. Regulatory and oversight considerations

**(a) Issue/rationale**

By introducing authority requirements, and in particular strict requirements for MS on oversight, the rules developed under the 1st and 2nd extension of the Agency scope have significantly strengthened the oversight requirements. In terms of efficiency, such rules have also introduced the concept of risk-based and cooperative oversight.

The effort needs now to focus on supporting the implementation of these new requirements.

**(b) What we want to achieve (scope and objective)**

Improve MS oversight capacities and capabilities.

**(c) How we want to achieve it: rulemaking actions**

RM Regulatory and oversight considerations					
Action number	Title				
RMT.0516	<b>Update of the Rules on Air Operations (Air OPS Regulation — all Annexes &amp; related AMC/GM)</b>				
	— Improve the authority and organisational requirements of the Air OPS Regulation taking into account identified implementation issues;				
	— Better identify inspector qualifications;				
	— Take into account new business models, as appropriate;				
	— Take into account the development of any lessons learned from the implementation of SMS;				
	— Align with the Occurrence Reporting Regulation (Regulation (EU) No 376/2014);				
	— Ensure compliance with the ICAO Standards And Recommended Practices (SARPs);				
	— Address identified safety issues such as pax seating and briefing;

FOT.009	Conduct of audits within Risk Based Oversight	ALL	EASA FS.5	Concept and best practices/2018	

2.5.3. New business models

(a) Issue/rationale

Upon the request of MS, the Agency tasked a working group of NAAs to assess airlines’ emerging ‘new’ business models and to identify related safety risks posed to the aviation system.

(b) What we want to achieve (scope and objective)

Due to the increased complexity of the aviation industry, the number of interfaces between organisations, their contracted services and regulators has increased. NAAs should work better together (cooperative oversight) and the Agency should evaluate whether the existing safety regulatory system adequately addresses current and future safety risks arising from new and emerging business models.

(c) How we want to achieve it: rulemaking actions

[None]

**(d) How we want to achieve it: other EPAS actions**

## 4.3. Operators other than airlines

**(a) Issue/rationale**

Rules may need to be harmonised within the EU as well as with the main international trade partners in order to either ensure fair competition or facilitate the free movement of goods, persons and services.

**(b) What we want to achieve (scope and objective)**

Harmonise requirements where this ensures fair competition or facilitates the free movement of goods, persons and services.

**(c) How we want to achieve it: rulemaking actions**

**RM**

**Operators other than airlines**

**Action number**

**Title**

Objective

**RMT.0232**

**Commercial air transport operations at night or in IMC using single-engined turbine aeroplane**

Set-up of the formal framework to allow commercial air transport operations with single-engined turbine (SET) aeroplanes at night/in instrument meteorological conditions (IMC) — CAT SET-IMC — which are currently not allowed; and

Transposition of ICAO Annex 6 provisions on CAT SET-IMC:

- Level playing field: such operations are already allowed by some MS based on exemptions to EU-OPS, which are based on different set of conditions;
- Harmonisation issue: Many major foreign aviation authorities (FAA, Civil Aviation Safety Authority of Australia (CASA), and TCCA) already allow such operations;
- Environmental issue: SET aeroplanes have a better environment footprint and their use should be promoted;
- Economic issue: it prevents the opening of low density routes only viable if operated by SET aeroplanes; and
- Social issue: it does not allow additional possibilities of movement for people living in remote areas.

**Affected stakeholders**

	2014	NPA/2016	Decision/2016	EASA FS.4	-

### 5.2. Airlines

**(a) Issue/rationale**

Passenger and cargo transport by airlines generate producer, consumer and wider economic benefits by multiple perspectives. Regulatory and administrative burden reduce these benefits and need therefore to be fully justified by corresponding safety benefits.

**(b) What we want to achieve (scope and objective)**

Ensure effective regulatory framework for airlines.

**(d) How we want to achieve it: rulemaking actions**

<b>RM</b>		<b>Airlines</b>				
<b>Action number</b>	<b>Title</b>					
<b>Objective</b>						
<b>RMT.0190</b>	<b>Requirements for relief pilots</b>					
Address the provisions for the use of relief pilots as regards experience, training, checking and crew resource management.						
<b>Affected stakeholders</b>						
Pilots, ATOs, and operators

### 5.3. General Aviation

**(a) Issue/rationale**

GA is a high priority for the Agency. The Agency is dedicating effort and resources towards creating simpler, lighter and better rules for GA. Recognising the importance of GA and its contribution to a safe European aviation system, the Agency in partnership with the EC and other stakeholders has created the GA Road Map.

**(b) What we want to achieve (scope and objective)**

Reduce the regulatory burden for GA.

(c) How we want to achieve it: rulemaking actions

### RMT.0264 Executive interior accommodation

The overall objective is the mitigation of the diverging interpretation of safety requirements on interior designs for aeroplanes with executive interiors. This is to ensure a common understanding of measures with an acceptable level of safety similar to the current CS-25 requirements when applied to commercial airliners, and to avoid time-consuming activities on repetitive certification issues.

More specifically, the NPA shall propose executive interior design specifications that will amend and/or complement CS-25 by introducing new provisions and associated AMC/GM for executive interiors, taking into account the compensating factors offered by such interiors and their utilisation.

#### Affected stakeholders

Manufacturers

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2011	CRD/2016	Decision/2016	EASA CT.7	B12

### RMT.0456 Integrated modular avionics (IMA)

The objectives are to ensure a cost-efficient and transparent certification process by:

- offering to IMA manufacturers the possibility to obtain European technical standard order authorisations (ETSOAs) at platform/module level, independent from aircraft;
- providing public guidance for incremental certification of IMA, starting from platform modules and culminating with installation on aircraft and covering all connected aspects (e.g. impact on Master Minimum Equipment List (MMEL)).

RMT.0456 will develop European technical standard order (ETSO)-2C153 enabling authorisations at platform/module level, independent from aircraft;

As part of the regular updates, amendments to CS-ETSO Subpart A will be developed to: 1) enable ETSOAs when aircraft functional modules are integrated on the already authorised IMA platform, during the initial design phase; and 2) issue AMC 20-170 to provide public guidance for incremental certification of IMA, from platform modules up to aircraft level.

#### Affected stakeholders

ETSOA holders

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2012	Decision/2016	Decision/2016	EASA CT.7	B14

### RMT.0572 Use of similarity analysis when showing compliance with SLD icing specifications

Propose an amendment of CS-25 providing guidance on the possibility of conducting a similarity analysis when showing compliance to supercooled large droplets (SLDs) ice protection specifications.

## 5.9. PCP/SESAR deployment

**(a) Issue/rationale**

Implement the regulatory needs of the SESAR common projects.

**(b) What we want to achieve (scope and objective)**

Enable implementation of new working methods and technologies developed by SEASAR with focus on data management.

**(c) How we want to achieve it: rulemaking actions**

Action number	Title Objective										
<b>RMT.0524</b>	<p><b>Data link services</b></p> <p>Development of requirements for extended data link operations for safety critical message use, including D-TAIX, DCL, protected mode controller–pilot data link communication (PM CPDLC), D-ATIS and controller–pilot data link communication (CPDLC), automatic dependent surveillance — contract (ADS-C) outside VHF data link coverage. This task is stemming from the Single European Sky (SES) initiative and SESAR and will address the PCP ATM functionality 6 requirements as well as the existing issues related to the current DLS regulation (Regulation (EC) No 29/2009).</p> <p><b>Affected stakeholders</b></p> <p>ANSPs, aerodrome operators, aircraft operators, and manufacturers</p> <table border="0"> <thead> <tr> <th style="text-align: left;"><b>Start</b></th> <th style="text-align: left;"><b>Next deliverable</b></th> <th style="text-align: left;"><b>End deliverable</b></th> <th style="text-align: left;"><b>Owner</b></th> <th style="text-align: left;"><b>Pre-RIA</b></th> </tr> </thead> <tbody> <tr> <td>2016</td> <td>ToR/2016</td> <td>Opinion/2018</td> <td>EASA FS.4</td> <td>-</td> </tr> </tbody> </table>	<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>	2016	ToR/2016	Opinion/2018	EASA FS.4	-

### **RMT.0639 Performance-based navigation implementation in the European air traffic management network**

PBN implementation that supports the improved performance of the EATMN, the uniform use of PBN specifications and functionalities. The optimal and safe use of airspace and the improved safe access to aerodromes through the improved airspace design, arrival/departure routes and approach procedures would be ensured based on a common application of navigation specifications and functionalities.

These regulatory measures define the ICAO PBN navigation specifications and functionalities that are to be used in the European airspace and the dates by which they are to be applied in accordance with the SES objectives and the PCP implementation.

#### **Affected stakeholders**

ANSPs, operators

<b>Start</b>	<b>Next deliverable</b>	<b>End deliverable</b>	<b>Owner</b>	<b>Pre-RIA</b>
2014	Opinion/2016	Decision/2017	EASA FS.4	-

### **RMT.0679 Revision of surveillance performance and interoperability (SPI)**

The current SPI Regulation (Regulation (EU) No 1207/2011) details the requirements for the carriage and operation of airborne surveillance equipment by both civil and State registered aircraft, and the dates by which qualifying aircraft must be equipped.

Several implementation issues have led the EC to propose a revision of the SPI Regulation, to be prepared by the Agency.

#### **Affected stakeholders**

ANSPs

2015	ToR/2016	Decision/2017	EASA FS.4	-

### **RMT.0680 Ground-based augmentation system (GBAS) CAT I/II/III**

The objective of this task is the development of the requirements for the use of GBAS augmented global navigation satellite system (GNSS) to support CAT I/II/III operations.

Augmentation systems (satellite based (SBAS) as well as ground based (GBAS) for precision approach) are proposed to increase the accessibility of airports in lower visual operations, as an alternative to ILS or where ILS is not a viable economical solution.

#### **Affected stakeholders**

ANSPs and aircraft operators

2016	ToR/2016	Decision/2018	EASA FS.4	-

**RMT.0682 Implementation of the regulatory needs of the SESAR common projects**

The general objective of the task is the development of the implementing measures as required to enable the timely deployment of the ATM functionalities and other operational changes stemming from SESAR and the European ATM Master Plan by addressing those issues which are not covered by existing RMTs.

The initial purpose of this task is to address the implementation needs, among others and when known, the following:

- Extended arrival management (AMAN) in the high density terminal manoeuvring areas (TMAs);
- Airport integration and throughput;
- Flexible airspace management and free route;
- Network collaborative management;
- Initial system-wide information management (SWIM); and
- Other new essential operational changes (e.g. user-driven prioritisation process (UDPP), trajectory-based tools, sector-based operations, etc.)

**Affected stakeholders**

ANSPs, aircraft operators, aerodrome operators, manufacturers

2016	ToR/2016	Opinion/2020	EASA FS.4	-

## 5.10. Regular updates/review of rules

**(a) Issue/rationale**

The aviation industry is complex and rapidly evolving. The corresponding rules need to be updated regularly to ensure that they are fit for purpose, cost-effective and can be implemented in practice.

**Regular updates** are issued when relevant data is available following an update of industry standards or feedback from certification activities or minor issues raised by the stakeholders.

Differently from the regular updates, the **review of existing rules (ex post evaluation)** is included in the programme following a formal assessment of the feedback from implementation, developments at ICAO level, how rules efficiency can be increased, which rules could be simplified and which requirements could possibly be deleted. This is done taking into account the principles of the performance-based approach.

**(b) What we want to achieve (scope and objective)**

Ensure that the regulatory framework is cost-effective and can be effectively implemented.

**(c) How we want to achieve it: rulemaking actions**

Regular updates planned for the period 2016–2020<sup>3</sup>:

- RMT.0031 Regular update of AMC/GM to Part-21
- RMT.0037 Regular update of CS-22
- RMT.0128 Regular update of CS-27&29, CS VLR (incl. AMC revision group 2)

<sup>3</sup> Regular updates are issued when relevant data is available.

- RMT.0184 Regular update of CS-E
- RMT.0457 Regular update of EASA TSOs
- RMT.0499 Regular update of CS-MMEL
- RMT.0502 Regular update of CS for balloons
- RMT.0503 Regular update of CS-APU
- RMT.0508 Regular update of CS-CC
- RMT.0509 Regular update of CS-FC
- RMT.0605 Regular update of CS-LSA
- RMT.0688 Regular update of CS SIMD

## 5.11. Review of rules (ex post evaluation)

<b>RM</b>		<b>Regular updates/review of rules</b>			
<b>Action number</b>	<b>Title</b>				
	<b>Objective</b>				
<b>RMT.0134</b>	<b>Rotorcraft AMC revision</b>				
	<ul style="list-style-type: none"> <li>— The FAA reviews and updates the advisory circular (AC) material on a 2-year revision cycle to maintain their relevance and improve the certification process.</li> <li>— The Agency and the FAA desire to develop and utilise the same AC used for Federal Aviation Regulation (FAR) Parts 27 and 29 as for CS-VLR, CS-27 and CS-29. Where agreeing to the same guidance material for a regulatory paragraph or technical topic is not practical, perhaps due to significant technical differences or different operational regulations, the objective will be to minimise and clearly delineate any differences.</li> </ul> <p>The aim of this task is to develop and maintain AC/AMC that have been found during certification activities to be incomplete, misleading, outdated or not reflecting accepted certification practice.</p>				
	<b>Affected stakeholders</b>

	2010	Decision/2016	Decision/2016	EASA CT.7	

**RMT.0180 CS-E engine testing, endurance/IMI/ETOPS**

Endurance:

Review the existing engine endurance test requirements, assess its suitability for all engines, and consider an alternate endurance test and associated methods of compliance. The current regulations may not adequately address the technological advancements in modern engines, as related to the current engine endurance test.

Initial maintenance inspection (IMI):

It has become increasingly clear that reliance upon robust development testing to support a certification programme can no longer be guaranteed. There is now a need to consider a potential revision to the CSs to better ensure that any reliability and integrity issues regarding the engine's design are identified and rectified prior to the engine entering service.

This task will introduce into CS-E a requirement based upon, if not identical to, the current FAR 33.90. This will ensure that engine tests are conducted at conditions representative of those expected to occur in service prior to the issue of a TC. The expected benefits of this include a reduction in the number of issues that arise following type certification, and a more robust certification programme.

**Affected stakeholders**

DAHs

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2016	ToR/2016	Decision/2018	EASA CT.7	A12

**RMT.0206 Systematic review and transposition of existing FAA TSO standards for parts and appliances into EASA ETSOs**

Harmonisation of requirements to facilitate the mutual recognition of parts and appliances

**Affected stakeholders**

ETSOA holders

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2013	Decision/2016	Decision/2016	EASA CT.7	

**RMT.0287 Updating Part-MED and related AMC and GM**

This task addresses a first complete review of Part-MED and the medical-related provisions in Part-ARA and Part-ORA. It contains a number of issues to be clarified or amended as identified by MS and the aero-medical experts. The task has been split and the Part-ORA/ARA MED-related issues will be addressed after having issued the Part-MED Opinion.

**Affected stakeholders**

Pilots, aero-medical centres (AeMCs), aeromedical examiners (AMEs), and NAAs

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2011	Opinion/2016	Opinion/2016	EASA FS.3	

**RMT.0338 Review of equipment requirements**

Review and update the Air OPS rules on instruments, data and equipment, taking into account ICAO recommendations and SRs.

**Affected stakeholders**

Operators

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2017	ToR/2017	Opinion/2020	EASA FS.2	

**RMT.0392 Regular updates of OPS rules**

This recurring task will include minor amendments and alternative means of compliance.

**Affected stakeholders**

All operators and NAAs

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2018	ToR/2018	Opinion/2019	EASA FS.2	

**RMT.0412 Update of the authority and organisation requirements pertaining to Part-FCL**

To review the IRs in Part-ARA and Part-ORA, and resolve any inconsistencies identified after the adoption of the Part-ARA and Part-ORA IRs. This is necessary to ensure that the EASA regulatory system reflects the state of the art, and specifically the best practices developed in the MS.

**Affected stakeholders**

TOs and NAAs

Start	Next deliverable	End deliverable	Owner	Pre-RIA
2012	NPA/2017	Opinion/2018	EASA FS.3	

**RMT.0424 Regular update of Part-MED**

A ‘standing task’ allowing the Agency to table non-controversial issues identified by industry and MS which should be corrected or clarified in Part-MED.

**Affected stakeholders**

Pilots, AeMCS, AMEs, and NAAs

Start	Next deliverable	End deliverable	Owner	Pre-RIA

**RMT.0692 Maintenance of the acceptable means of compliance and guidance material on the safety (key) performance indicator 'Use of risk analysis tool' for the air traffic management performance scheme**

The general objective of this task is the update of the AMC/GM for the implementation and measurement of safety (key) performance indicators (S(K)PIs) (ED Decision 2014/035/R) to avoid inconsistencies that may lead to stakeholders not meeting the prescribed targets of the performance scheme in ATM and as appropriate to cover other relevant implementation feedback.

The specific objective of this task is, among others, to update the AMC/GM relating to:

- the risk analysis tool (RAT) methodology; and
- the ATM specific occurrences.

### Opinions 2016

Driver	Baseline year	Baseline quarter	Task number	Task title
Safety	2016	1	RMT.0251	Embodiment of safety management system requirements into Commission Regulations (EU) Nos 1321/2014 and 748/2012
			RMT.0681	Alignment of implementing rules & AMC/GM with Regulation (EU) No 376/2014
	2	RMT.0225	Development of an ageing aircraft structure plan	
		RMT.0262	Embodiment of level of involvement (LOI) requirements into Part-21	
		RMT.0445	Technical requirement and operation procedures for airspace design, including procedure design	
	3	RMT.0069	Seat crashworthiness improvement on large aeroplanes — Dynamic testing 16g	
		RMT.0071	Additional airworthiness specifications for operations: Thermal/acoustic insulation material	
		RMT.0393	Maintenance check flights (MCFs)	
		RMT.0516	Update of the Rules on Air Operations (Air OPS Regulation — all Annexes & related AMC/GM)	
	4	RMT.0581	Loss of control prevention and recovery training	
		RMT.0369	Prediction of wind shear for aeroplane CAT operations (IRs)	
		RMT.0371	TAWS operation in IFR and VFR and TAWS for turbine-powered aeroplanes under 5 700 kg MTOM able to carry six to nine passengers	
		RMT.0589	Rescue and firefighting services (RFFS) — Remission factor, cargo flights, etc.	

Driver	Baseline year	Baseline quarter	Task number	Task title
Efficiency/proportionality	2016	1	RMT.0281	New training/teaching technologies for maintenance staff
			RMT.0639	Performance-based navigation implementation in the European air traffic management network
		2	RMT.0190	Requirements for relief pilots
			RMT.0547	Task force for the review of Part-M for General Aviation (PHASE II)
		3	RMT.0230	Implementing rules for remotely piloted aircraft systems (RPAS)
			RMT.0352	Non-commercial operations of aircraft listed in the operations specifications (OpSpecs) by an AOC holder (IRs)
			RMT.0674	Revision of the European operational rules for balloons
		4	RMT.0287	Updating Part-MED and related AMC and GM
	RMT.0657	Training outside ATOs		
Level playing field	2016	1	RMT.0209	Contracting of continuing airworthiness management activities
		3	RMT.0276	Technical records
			RMT.0695	Non-ETOPS operations using performance class A aeroplanes with a MOPSC of 19 or less

**Decisions 2016**

Driver	Baseline year	Baseline quarter	Task number	Task title
Safety	2016	1	RMT.0119	Yawing conditions
			RMT.0696	Aligning the Implementation of Evidence-Based Training to European Rules (EBT introductory task)
		RMT.0589	Rescue and firefighting services (RFFS) — Remission factor, cargo flights, etc.	
		2	RMT.0595	Technical review and regular update of learning objectives and syllabi for commercial licences (IR)
			3	RMT.0120
		RMT.0608		Helicopter gearbox lubrication
Efficiency/proportionality	2016	1	RMT.0456	Integrated modular avionics (IMA)
			RMT.0673	Regular update of CS-25
			RMT.0692	Maintenance of the acceptable means of compliance and guidance material on the safety (key performance indicator ‘Use of risk analysis tool’ for the air traffic management performance scheme
		2	RMT.0134	Rotorcraft AMC Revision
			RMT.0572	Use of similarity analysis when showing compliance to SLD icing specifications
		3	RMT.0607	AMC/GM to Part-21 for operational suitability data (OSD)
			RMT.0264	Executive interior accommodation
		4	RMT.0206	Systematic review and transposition of existing FAA TSO for parts and appliances into EASA ETSO

## Rulemaking programme 2016–2020

Appendix I — Deliverables expected in 2016

Efficiency/proportionality	2016	4	RMT.0690	Certification Specifications for standard changes & standard repairs (CS-STAN) — Phase 2
Level playing field	2016	1	RMT.0269	Carriage of Special Categories of Passengers (SCPs)
		3	RMT.0384	Engine open rotor and installation
		4	RMT.0583	A-NPA on flight test engineer (FTE) licensing
Environment	2016	4	RMT.0560	Halon — Update of Part-26 to comply with ICAO standards

**Decisions to be issued in 2016 pending adoption of IRs**

Driver	Baseline year	Baseline quarter	Task number	Task title
Safety	2016	1	RMT.0681	Alignment of implementing rules & AMC/GM with Regulation (EU) No 376/2014
		4	RMT.0251	Embodiment of safety management system requirements into Commission Regulations (EU) Nos 1321/2014 and 748/2012
Efficiency/proportionality	2016	2	RMT.0287	Updating Part-MED and related AMC and GM
Level playing field	2016	4	RMT.0232	Commercial air transport operations at night or in IMC using single-engined turbine aeroplane

**NPAs 2016**

Driver	Baseline year	Baseline quarter	Task number	Task title
Safety	2016	1	RMT.0120	Helicopter ditching and water impact occupant survivability
			RMT.0369	Prediction of wind shear for aeroplane CAT operations (IRs)
			RMT.0371	TAWS operation in IFR and VFR and TAWS for turbine-powered aeroplanes under 5 700 kg MTOM able to carry six to nine passengers
			RMT.0464	Requirements for air traffic services
			RMT.0477	Technical requirements and operational procedures for aeronautical information services and aeronautical information management
			RMT.0595	Technical review and regular up-date of Learning Objectives and Syllabi for commercial licenses IR
			RMT.0648	Aircraft cybersecurity
			RMT.0445	Technical requirement and operation procedures for airspace design, including procedure design
			RMT.0681	Alignment of implementing rules & AMC/GM with Regulation (EU) No 376/2014
			2	RMT.0106
		RMT.0249		Recorders installation and maintenance thereof — certification aspects
		RMT.0296		Review of aeroplane performance requirements for CAT operations
		3	RMT.0271	In-flight recording for light aircraft
			RMT.0608	Helicopter gearbox lubrication

## Rulemaking programme 2016–2020

Appendix I — Deliverables expected in 2016

Safety	2016	4	RMT.0118	Analysis of on-ground wings contamination effect on take-off performance degradation
			RMT.0599	Evidence-based and competency-based training
			RMT.0647	Loss of control or loss of flight path during go-around or climb
			RMT.0671	Engine bird ingestion
Efficiency/proportionality	2016	1	RMT.0638	Certification requirements for VFR heliports located at aerodromes falling under the scope of Basic Regulation
		RMT.0674	Revision of the European operational rules for balloons	
		RMT.0677	Easier access of General Aviation (GA) pilots to instrument flight rules (IFRs) flying	
		RMT.0498	Reorganisation of Part-23 and CS-23	
		RMT.0561	Update of AMC-20 — ‘In-flight entertainment (IFE), lead-free soldering, harmonisation of safety and software criteria’	
		RMT.0657	Training outside ATOs	
		2	RMT.0287	Updating Part-MED and related AMC and GM
		3	RMT.0180	CS-E engine testing, endurance/IMI/ETOPS
		4	RMT.0018	Installation of parts and appliances that are released without an EASA Form 1 or equivalent.
			RMT.0519	Maintaining CS-ACNS
		RMT.0537	Privilege for CAMOs to issue flight conditions	
		RMT.0654	Revision of the balloon licensing requirements	
RMT.0678	Addressing other FCL GA issues (FCL ‘Light’)			

## Rulemaking programme 2016–2020

Appendix I — Deliverables expected in 2016

Efficiency/proportionality	2016	4	RMT.0680	Ground-based augmentation system (GBAS) CAT I/II/III
Level playing field	2016	1	RMT.0325	HEMS performance and public interest sites
			RMT.0492	Development of FTL for CAT operations of emergency medical services by aeroplanes and helicopters
			RMT.0493	Update and harmonisation of FTL for commercial air transport (CAT) by aeroplane for air taxi operations and single-pilot operations taking into account operational experience and recent scientific evidence
			RMT.0573	Fuel planning and management
			RMT.0695	Non-ETOPS operations using performance class A aeroplanes with a MOPSC of 19 or less
			RMT.0384	Engine open rotor and installation
	3	RMT.0252	Instructions for continuing airworthiness (ICA)	
	RMT.0601	Transposition of provisions on electronic flight bag from ICAO Annex 6

### *Appendix II — Acronyms and initialisms*

FO	focused oversight
FSTD	flight simulator training device
FTE	flight test engineer
FTL	flight time limitations
GA	General Aviation
GBAS	ground-based augmentation system
GCOL	ground collision
GM	guidance material
GNSS	global navigation satellite system
GPWS	ground proximity warning systems
HE	helicopters
HEMS	helicopter emergency medical services
HP	High Pressure
HPA	high performance aircraft
HOSS	helicopter offshore safety and survival
HUD	head-up display
ICA	instructions for continuing airworthiness
ICAO	International Civil Aviation Organization
IFR	instrument flight rules
IHST	International Helicopter Safety Team
IMA	integrated modular avionics
IMC	instrument meteorological conditions
IMI	initial maintenance inspection
IR	instrument rating
IRs	implementing rules
JAA	Joint Aviation Authorities
JAR	Joint Aviation Requirement
KRE	key risk element
LAPL	light aircraft pilot licence
LOCART	loss of control avoidance and recovery training
LOC- I	loss of control in flight

## **Rulemaking programme 2016–2020**

### *Appendix II — Acronyms and initialisms*

LOI	level of involvement
LOs	learning objectives
LSA	light sport aeroplanes
LVO	low visibility operations
MAC	mid-air collision
MAPSC	maximum approved passenger seating configuration
MOPSC	maximum operational passenger seating configuration
MCF	maintenance check flight
MMEL	master minimum equipment list
MO	maintenance organisation
MOPS	minimum operational performance specification
MPL	multi-crew pilot licence
MS	Member State
MST	Member State task
MTO	maintenance training organisation
MTOM	maximum take-off mass
NAA	national aviation authority
NCO	non-commercial operations with other-than-complex motor-powered aircraft
NDB	non-directional beacon
NLA	new large aircraft
NoA	network of analysts
NPA	notice of proposed amendment
OSD	operational suitability data
POA	production organisation approval
PBN	performance-based navigation
PCP	Pilot Common Project
PIS	public interest site
PM CPDLC	protected mode controller–pilot data link communication
PPL	private pilot licence
RAT	risk analysis tool
RE	runway excursion

## **Rulemaking programme 2016–2020**

### *Appendix II — Acronyms and initialisms*

RI	runway incursion
RES	research
RESA	runway end safety area
RFID	radio frequency identification
RIA	regulatory impact assessment
RMT	rulemaking task
RPAS	remotely piloted air system
SARPs	standards and recommended practices
SCF	system component failure
SCP	special category of passenger
SES	single European sky
SESAR	single European sky ATM research programme
SET	single-engined turbine
SLD	supercooled large droplets
SMICG	Safety Management International Collaboration Group
SMS	safety management system
SP	safety promotion
SPI	surveillance performance and interoperability
SPL	student pilot licence
SPT	safety promotion task
SR	safety recommendation
SSIP	supplemental structural inspection programme
SSP	State safety plan
STC	supplemental type certificate
SVGS	synthetic vision guidance systems
SVS	synthetic vision systems
SWIM	system-wide information management
SYS	systemic
TAWS	terrain awareness warning system
TBO	time between overhaul
TC	type certificate

## **Rulemaking programme 2016–2020**

### *Appendix II — Acronyms and initialisms*

TCCA	Transport Canada Civil Aviation
TMA	terminal manoeuvring area
UDPP	user-driven prioritisation process
UPRT	upset prevention recovery training
VLA	very light aeroplanes
VFR	visual flight rules
VOR	VHF omnidirectional range
WFD	widespread fatigue damage
WIDDSWG	Water Impact, Ditching Design and Crashworthiness Working Group
WG	working group

## Appendix III — Coding legend

Axx	High safety risk — with reference to the Pre-RIA risk matrix
Bxx	Medium safety risk — with reference to the Pre-RIA risk matrix
Cxx	Low safety risk — with reference to the Pre-RIA risk matrix
-	Not available

## Appendix IV — Index
