Description

EASA released the XML format of its [Easy Access Rules](#).

XML is a machine-readable format that can easily be processed automatically by recipients, producing output that can be included in local applications, search databases, etc.

Easy Access Rules are now available on the EASA Regulations page under the respective domain in three formats:

- in pdf,

- as online publication,
- in machine-readable XML.

We also published [documentation related to this new XML format](#).

This session is dedicated to explaining the possibilities of this XML format and to answering your questions related to processing it.

Please use the [Contact us form](#) to submit your questions and feedback on the XML format of Easy Access Rules.
