WP 2: Safety analysis and occurrence reporting

On-site support activity to Civil Aviation Directorate of the Republic of Serbia

Within the framework of the EU-funded EASA - IPA4 project, an on-site support activity on safety analysis and occurrence reporting was delivered to the Civil Aviation Directorate of the Republic of Serbia from 26 to 28 February 2019.

The overall objective of this interactive working session was to review the current status of the safety analysing and occurrence reporting system, and to support the implementation of applicable rules and processes.

The activity encompassed support on the implementation of the legal framework and on improvement of the authority's processes and procedures linked to management and evaluation of occurrence reports. Presentations on occurrence reporting elements (e.g. just culture, safety analysis, use of taxonomy, etc.) were delivered and discussed. EASA experts supported installation and updates of ECCAIRS software, taxonomy database and data analysis tools (AWB) and worked together with the CAA experts on concrete examples of data quality, coding guidelines, use of taxonomy, risk assessment (ERCS) and data analysis processes.
